CUMULATIVE AUTHOR INDEX
VOLUMES 51–75

A

Abou-Nemeh, I. and Van Peteghem, A.P.
Kinetic study of the emulsion breakage during metals extraction by liquid surfactant membranes (LSM) from simulated and industrial effluents 70 (1992) 65

Abou-Nemeh, I. and Van Peteghem, A.P.
Sorbitan monooleate (Span 80) decomposition during membrane ageing. A kinetic study 74 (1992) 9

Acda, R.I. and Mora, J.C.
Behavioral analysis of air perstripping 67 (1992) 1

Acharya, D.R. see Li, K. 52 (1990) 205

Adhamy, A. see Scott, K. 72 (1992) 245

Adler, K.P. see Weiss, A.M. 58 (1991) 153

Agarwalla, S. and Lund, C.R.F.
Use of a membrane reactor to improve selectivity to intermediate products in consecutive catalytic reactions 70 (1992) 129

Ageev, Ye.P., Smirnov, V.S. and Vershoubskii, A.V.
Oscillatory mode of the operation of an asymmetric poly(vinyltrimethylsilane)membrane 60 (1991) 1

Ageev, Ye.P., Matushkina, N.N. and Strusovskaya, N.L.
Pervaporation through structurally unstable polymeric membranes 67 (1992) 167

Aguilella, V.M., Mafé, S., Manzanares, J.A. and Pellicer, J.
Current–voltage curves for ion-exchange membranes. Contributions to the total potential drop 61 (1991) 177

Aguilella, V.M. see Ramírez, P. 73 (1992) 191

Ahmed, T. and Semmens, M.J.
Use of sealed end hollow fibers for bubbleless membrane aeration: experimental studies 69 (1992) 1

Ahmed, T. and Semmens, M.J.
The use of independently sealed microporous hollow fiber membranes for oxygenation of water: model development 69 (1992) 11

Ahn, J. see Holze, R. 73 (1992) 87

Aimar, P., Meireles, M. and Sanchez, V.
A contribution to the translation of retention curves into pore size distribution for sieving membranes 54 (1990) 321

Aimar, P. see Meireles, M. 56 (1991) 13

Aimar, P., Howell, J.A., Clifton, M.J. and Sanchez, V.
Concentration polarisation build-up in hollow fibers: a method of measurement and its modelling in ultrafiltration 59 (1991) 81

Aimar, P. see Chahboun, A. 67 (1992) 295

Aimar, P. see Gourgues, C. 74 (1992) 51

Ajustron, F. see Chahboun, A. 67 (1992) 295

Akedo, T. see Kataoka, A. 69 (1992) 131

Aki, Y. see Tasaka, M. 67 (1992) 83; 71 (1992) 151

Akiyama, S. see Okubo, T. 59 (1991) 73

Akiyama, T. see Nakanishi, T. 64 (1991) 247

Alamelu, S. see Panduranga Rao, K. 71 (1992) 161

Albers, J.H.M. see Smid, J. 64 (1991) 121

Alekperova, N.M. see Sudareva, N.N. 62 (1991) 1

Al-Enezi, G. see Fattah, K.A. 65 (1992) 247

Alfani, F., Cantarella, L., Gallifuoco, A. and Cantarella, M.
Membrane reactors for the investigation of product inhibition of enzyme activity 52 (1990) 339

Alger, M.M. see Ward, W.J. 55 (1991) 173

Almeida, J.S. see Crespo, J.P.S.G. 61 (1991) 303

Alvarez, R. see Suárez, E. 68 (1992) 301

Alwattari, A.A. see Kim, S.S. 64 (1991) 41

Alwattari, A.A. and Lloyd, D.R.
Microporous membrane formation via thermally-induced phase separation. VI. Effect of diluent morphology and relative crystallization kinetics on polypropylene membrane structure 64 (1991) 55

Amar, A. see Tobias, H. 75 (1992) 213

Amemiya, H. see Iwata, H. 55 (1991) 119

Amemiya, M. see Ishizu, K. 54 (1990) 75; 65 (1992) 129

An, J.H. see Lee, D.S. 75 (1992) 15

Anderson, M.A. see Hackley, V.A. 70 (1992) 41

Ando, H. see Uemiya, S. 56 (1991) 303

Ankleshwaria, B.V. see Dave, A.M. 66 (1992) 79

Ankleshwaria, B.V. see Desai, N.V. 71 (1992) 201

Anzai, H. see Okubo, T. 59 (1991) 73

Aoki, T., Oikawa, E., Hayakawa, Y. and Nishida, M.
Improvement of oxygen permselectivity through polydimethylsiloxane and poly(1-trimethylsilylpropyne) films by the addition of a small amount of poly(trifluoromethyl substituted arylacetylene) 57 (1991) 207

Aoyama, M. see Fujii, Y. 72 (1992) 53, 73

Arciprete, C.P. see Dimitrijewits de Albani, M.I. 69 (1992) 21

Arevalo, A.R. see Fritzsche, A.K. 68 (1992) 65

Arnold, S.T. and Davies, G.A.
Simulation of the structure of polymer membranes: pore properties and preliminary results for particulate blinding 70 (1992) 85

Arnold, Jr., C. see Assink, R.A. 56 (1991) 143

Asai, H. see Kato, S. 72 (1992) 31

Asaka, K.
Electrochemical properties of asymmetric cellulose acetate membranes 52 (1990) 57

Asaka, K. see Hanai, T. 64 (1991) 153

Asaka, K. see Zhao, K. 64 (1991) 163

Asakura, T. see Demura, M. 59 (1991) 39

Asami, K. see Hanai, T. 64 (1991) 153

Asami, K. see Zhao, K. 64 (1991) 163

Ashworth, A.J., Brisdon, B.J., England, R., Reddy, B.S.R. and Zafar, I.

The permselectivity of polyorganosiloxanes containing ester functionalities 56 (1991) 217
Ashworth, A.J.
Relation between gas permselectivity and permeability in a bilayer composite membrane 71 (1992) 169
Assink, R.A., Arnold, Jr., C. and Hollandsworth, R.P.
Preparation of oxidatively stable cation-exchange membranes by the elimination of tertiary hydrogens 56 (1991) 143
Assogna, A., Perego, G., Roggero, A., Sisto, R. and Valentini, C.
Structure and gas permeability of silylated polyphenylene oxide 71 (1992) 97
Auclair, B. see Reynard, J.M. 67 (1992) 57
Audinos, R. and Branger, J.L.
Ultrafiltration concentration of enzyme hydrolysates 68 (1992) 195

B

B.Nagy, O. see Szpakowska, M. 64 (1991) 129
Babcock, W.C. see Friesen, D.T. 56 (1991) 127
Bae, Y.H. see Feil, H. 64 (1991) 283
Bagreev, V.V. see Kalachev, A.A. 75 (1992) 1
Bai, J. see Fouda, A. 64 (1991) 263
Baltus, R.E. see Dalvie, S.K. 71 (1992) 247
Bandini, S. and Gostoli, C.
Ethanol removal from fermentation broth by gas membrane extraction 70 (1992) 119
Bandini, S., Gostoli, C. and Sarti, G.C.
Separation efficiency in vacuum membrane distillation 73 (1992) 217
Baniel, A., Eyal, A., Edelstein, D., Hajdu, K., Hazan, B., Ilan, Y. and Zamir, E.
Porogen derived membranes. 1. Concept description and analysis 54 (1990) 271
Bansal, A. see Clark, W.M. 55 (1991) 21
Baranowski, B.
Non-equilibrium thermodynamics as applied to membrane transport 57 (1991) 119
Bardot, C. see Jallut, C. 68 (1992) 271
Bargeman, D. see Cuperus, F.P. 61 (1991) 73; 66 (1992) 45; 71 (1992) 57
Bargeman, D. see Neplenbroek, A.M. 67 (1992) 107, 121, 133, 149
Bargeman, D. see Broek, A.P. 73 (1992) 143
Bariou, B. see Quinson, J.F. 58 (1991) 191
Barker, P.E. and Till, A.
Using multistage techniques to improve diafiltration fractionation efficiency 72 (1992) 1
Barlow, E. see Thomas, M.P. 61 (1991) 215
Barnier, H. see Dumon, S. 74 (1992) 289
Bârţan, M. see Mercea, P.-V. 59 (1991) 353
Bartels-Caspers, C., Tusel-Langer, E. and Lichtenthaler, R.N.
Sorption isotherms of alcohols in zeolite-filled silicone rubber and in PVA-composite membranes 70 (1992) 75
Bartolo, L.D. see Molinari, R. 73 (1992) 203
Bartsch, R.A. see Brown, P.R. 56 (1991) 195
Basu, R. and Sirkar, K.K.
Pharmaceutical product recovery using a hollow fiber contained liquid membrane: A case study 75 (1992) 131
Basu, R. and Sirkar, K.K.
Pharmaceutical product recovery using a hollow fiber contained liquid membrane: A case study 75 (1992) 131
Bauer, C.J.M., Smid, J., Olijslager, J. and Smolders, C.A.
The resistance towards gas transport of the sublayer of asymmetric PPO hollow fiber membranes determined by plasma-etching 57 (1991) 307
Baumann, H., Keller, R. and Ruzicka, E.
Partially cationized cellulose for non-thrombogenic membrane in the presence of heparin and endothelial-cell-surface-heparansulfate (ES-HS) 61 (1991) 253
Bauser, H. see McDonogh, R.M. 73 (1992) 181
Beauvillain, J. see Chahboun, A. 67 (1992) 295
Beckman, I.N., Shelekhin, A.B. and Teplyakov, V.V.
Separation of gas mixtures in unsteady-state conditions 55 (1991) 283
Beckman, I.N. see Shelekhin, A.B. 73 (1992) 73
Behling, R.-D. see Jia, M. 57 (1991) 289; 73 (1992) 119
Belenkii, B.G. see Sudareva, N.N. 68 (1992) 263
Bell, G. see Vaidya, A.M. 71 (1992) 139
Bellantone, M. see Catapano, G. 52 (1990) 351
Bellobono, I.R., Muffato, F., Ermondi, C., Selli, E., Righetto, L. and Zeni, M.
Thermodynamic study of sorption of n-alkanes onto 5A zeolites immobilized in photosynthetic membranes 55 (1991) 263
Bellobono, I.R., Muffato, F., Ermondi, C., Selli, E. and Righetto, L.
Gas separation membranes containing carbon immobilized by photochemical grafting onto polymers 55 (1991) 273
Bellucci, F. see Nicodemo, L. 52 (1990) 393; 70 (1992) 207
Belzner, A. see Gür, T.M. 75 (1992) 151
Ben Aim, R. see Dharmappa, H.B. 65 (1992) 173
Ben Aim, R. see Peuchot, M.M. 68 (1992) 241
Benavente, J. see Jonsson, G. 69 (1992) 29
Bendjama, Z. see Clément, R. 66 (1992) 193
Bengston, G. see Bödekker, K.W. 54 (1990) 1
Bengtson, G. see Böddeker, K.W. 53 (1990) 143

Berner, B. see Dinh, S.M. 69 (1992) 223
Bertóti, I. see Keszler, B. 62 (1991) 201
Bhandarkar, M., Shelekhin, A.B., Dixon, A.G. and Ma, Y.H.
Adsorption, permeation, and diffusion of gases in microporous membranes. I. Adsorption of gases on microporous glass membranes 75 (1992) 221
Bhattacharjee, C. and Bhattacharya, P.K.
Prediction of limiting flux in ultrafiltration of kraft black liquor 72 (1992) 137
Bhattacharjee, S. and Bhattacharya, P.K.
Flux decline behaviour with low molecular weight solutes during ultrafiltration in an unstirred batch cell 72 (1992) 149
Bhattacharya, P.K. see Sridhar, S. 57 (1991) 187
Bhattacharya, P.K. see Bhattacharjee, C. 72 (1992) 137, 149
Bhattacharyya, D. see Hughes, J.A. 60 (1991) 75
Bhattacharyya, D. see Han, M.J. 62 (1991) 325
Bhattacharyya, D. see Diaz, M.A. 69 (1992) 179
Bhide, B.D. and Stern, S.A.
A new evaluation of membrane processes for the oxygen-enrichment of air. I. Identification of optimum operating conditions and process configuration 62 (1991) 13
Bhide, B.D. and Stern, S.A.
A new evaluation of membrane processes for the oxygen-enrichment of air. II. Effects of economic parameters and membrane properties 62 (1991) 37
Blaha, S.R. see Cini, P. 55 (1991) 199
Blake, N.J., Cumming, I.W. and Streat, M.
Prediction of steady state crossflow filtration using a force balance model 68 (1992) 205
Blanpain, P. see Gupta, B.B. 70 (1992) 257
Bleha, M. see Šumberová, V. 69 (1992) 51
Bleha, M. and Tishchenko, G.A.
Neutralization dialysis for desalination 73 (1992) 305
Blokhra, R.L. and Khajuria, M.
Flow through porous media. Part XIII. Hydrodynamic flow studies of aqueous solutions of methanol, sucrose, sodium bicarbonate and their mixtures through antimony oxide membranes 62 (1991) 211
Blokhra, R.L. and Prakash, Ch.
Electro-kinetic transport coefficients of aqueous binary mixtures through titanium oxide porous plug 70 (1992) 1
Blume, I., Schwering, P.J.F., Mulder, M.H.V. and Smolders, C.A.
Vapour sorption and permeation properties of poly(dimethylsiloxane) films 61 (1991) 85
Bo, D. and Kun, Z.
Preparation and properties of polyimide ultrafiltration membranes 60 (1991) 63
Boakye, E.E. and Yeager, H.L.
Water sorption and ionic diffusion in short side chain perfluorosulfonate ionomer membranes 69 (1992) 155
Bobrova, L.P. see Timashev, S.F. 59 (1991) 117
Böddeker, K.W.
Terminology in pervaporation 51 (1990) 259
Böddeker, K.W., Bengtson, G. and Bode, E.
Pervaporation of low volatility aromatics from water 53 (1990) 143
Bode, E. see Böddeker, K.W. 53 (1990) 143
Bödekker, K.W., Bengston, G. and Pingel, H.
Pervaporation of isomeric butanols 54 (1990) 1
Bodzek, M. and Bohdziewicz, J.
Porous polycarbonate phase-inversion membranes 60 (1991) 25
Bodzek, M. and Konieczny, K.
The influence of molecular mass of poly(vinyl chloride) on the structure and transport characteristics of ultrafiltration membranes 61 (1991) 131
Bohdziewicz, J. see Bodzek, M. 60 (1991) 25
Bokarev, A.K. see Platé, N.A. 60 (1991) 13
Bokvist, K. and Sandblom, J.
Mechanisms of facilitation and blocking in gramicidin channels by impermeant ions 66 (1992) 157
Bon, A.I. see Karachevtsev, V.G. 65 (1992) 1
Bondarenko, A.G. see Timashev, S.F. 59 (1991) 117
Boom, R.M. see Van 't Hof, J.A. 70 (1992) 17
Boom, R.M. see Smolders, C.A. 73 (1992) 259
Boom, R.M., Wienk, I.M., Van den Boomgaard, Th. and Smolders, C.A.
Microstructures in phase inversion memmbranes. Part 2. The role of a polymeric additive 73 (1992) 277
Bordogna, L. see Di Landro, L. 64 (1991) 229
Borle, F., Michel, H. and Sigrist, H.
Phospholipid polymerization and reconstitution of bacteriorhodopsin in photopolymerizable lipid vesicles 72 (1992) 21
Bottero, J.-Y. see Lahoussine-Turcaud, V. 52 (1990) 173
Bottino, A., Camera-Roda, G., Capannelli, G. and Munari, S.
The formation of microporous polyvinylidene difluoride membranes by phase separation 57 (1991) 1
Boudet-Dumy, M., Lindheimer, A. and Gavach, C.
Transport properties of anion exchange membranes in contact with hydrochloric acid solutions. Membranes for acid recovery by electrodialysis 57 (1991) 57
Bowen, W.R. and Hughes, D.T.
Properties of microfiltration membranes. Part II. Adsorption of bovine serum albumin at aluminium oxide membranes 51 (1990) 189
Bozzano, A.G. and Glatz, Ch.E.
Separation of proteins from polyelectrolyes by ultrafiltration 55 (1991) 181
Branger, J.L. see Audinos, R. 68 (1992) 195
Brannon-Peppas, L. and Harland, R.S.

Absorbent Polymer Technology 69 (1992) 185
Brinkman, H.W. see Lin, Y.S. 66 (1992) 211
Brisdon, B.J. see Ashworth, A.J. 56 (1991) 217
Britan, I.M., Leites, I.L. and Vasilkovskaya, T.N.
Membrane technology of mixed-gas separation: thermodynamic analysis for feasibility study 55 (1991) 349
Brites, A.M. and De Pinho, M.N.
Mass transfer in ultrafiltration 61 (1991) 49
Broek, A.P., Teunis, H.A., Bargeman, D., Sprengers, E.D. and Smolders, C.A.
Characterization of hollow fiber hemodialysis membranes: pore size distribution and performance 73 (1992) 143
Bromberg, L., Levin, G., Libman, J. and Shanzer, A.
A novel tetradentate hydroxamate as ion carrier in liquid membranes 69 (1992) 143
Bromberg, L., Lewin, I. and Warshawsky, W.
Membrane extraction of silver by di(2-ethylhexyl)dithiophosphoric acid 70 (1992) 31
Bromberg, L., Levin, G. and Kedem, O.
Transport of metals through gelled supported liquid membranes containing carrier 71 (1992) 41
Bromberg, L.E.
Transport of monocharged ions through environment-sensitive composite membranes based on polyelectrolyte complexes 62 (1991) 117
Bromberg, L.E.
Composite membranes based on polyelectrolyte complexes 62 (1991) 131
Bromberg, L.E.
Electrical impedance of composite membranes based on polyelectrolyte complexes 62 (1991) 145
Bromberg, L.E.
Interaction of composite membranes based on polyelectrolyte complexes with copper ions 62 (1991) 155
Brose, D. see Ray, R. 62 (1991) 347
Brose, D.J. see Friesen, D.T. 56 (1991) 127
Brossas, J. see Friedmann, G. 65 (1992) 93
Brown, P.R., Hallman, J.L., Whaley, L.W., Desai, D.H., Pugia, M.J. and Bartsch, R.A.
Competitive, proton-coupled, alkali metal cation transport across polymer-supported liquid membranes containing sym-(decyl)-dibenzo-16-crown-5-oxyacetic acid: Variation of the alkyl 2-nitrophenyl ether membrane solvent 56 (1991) 195
Brož, Z. see Uchytil, P. 73 (1992) 47
Brunea, J. see Elmidaoui, A. 67 (1992) 263
Bryjak, M., Wieczorek, P., Kafarski, P. and Lejczak, B.
Transport of amino acids and their phosphonic acid analogues through supported liquid membranes containing macrocyclic carriers. Experimental parameters 56 (1991) 167
Bueno, W.A. see Filho, G.R. 74 (1992) 19
Bulvestre, G. see Reynard, J.M. 67 (1992) 57
Bunge, A.L. see Wang, C.C. 53 (1990) 71, 105
Burban, P.M. see Laciak, D.V. 65 (1992) 31
Burgard, M. see Sirlin, C. 54 (1990) 299
Burggraaf, A.J. see Lin, Y.S. 66 (1992) 211
Burggraaf, A.J. see Uhlhorn, R.J.R. 66 (1992) 259, 271
Butler, E.P. see Thomas, M.P. 61 (1991) 215
Butterfield, D.A.
Principles of biological membrane structure: Alteration of the physical state of one side of the membrane by modulation of the physical state of the opposite side of the membrane 53 (1990) 3
Butterfield, D.A. see Zhuang, P. 66 (1992) 247

C

Cable, K.M. see Moore, R.B. 75 (1992) 7
Cai, F.S. see Gradon, L. 58 (1991) 201
Camera-Roda, G. see Bottino, A. 57 (1991) 1
Cametti, C. see Santini, M.T. 65 (1992) 7
Cannon, K.C. and Hacskaylo, J.J.
Evaluation of palladium-impregnation on the performance of a Vycor glass catalytic membrane reactor 65 (1992) 259
Cantarella, L. see Alfani, F. 52 (1990) 339
Cantarella, M. see Alfani, F. 52 (1990) 339
Capannelli, G. see Bottino, A. 57 (1991) 1
Carbonell, R.G. see Cwirko, E.H. 67 (1992) 211, 227
Carlin, R.T. see Pez, G.P. 65 (1992) 21
Carrondo, M.J.T. see Crespo, J.P.S.G. 61 (1991) 303
Catapano, G., Iorio, G., Drioli, E., Lombardi, C.P., Crucitti, F., Doglietto, G.B. and Bellantone, M.
Theoretical and experimental analysis of a hybrid bioartificial membrane pancreas: A distributed parameter model taking into account Starling fluxes 52 (1990) 351
Cecille, L. and Toussaint, J.-C.
Future Industrial Prospects of Membrane Processes 52 (1990) 115
Chahboun, A., Coratger, R., Ajustron, F., Beauvillain, J., Aimar, P. and Sanchez, V.
First investigations on the use of scanning tunnelling

microscopy (STM) for the characterisation of porous membranes 67 (1992) 295
Chambers, A.R. see Friesen, D.T. 56 (1991) 127
Chang, D.M. see Hsieh, K.H. 56 (1991) 279, 297
Charbit, F. see Charbit, G. 54 (1990) 285
Charbit, G., Charbit, F., Chevalier, J.-L. and Molin, P.
Pervaporation through dense membrane: Calculation method 54 (1990) 285
Charcosset, C., Jaffrin, M.Y. and Ding, L.H.
Effect of permeate to feed ratio on protein recovery in membrane plasma fractionation 60 (1991) 87
Chen, C.H. see Wang, Y.J. 53 (1990) 275
Chen, C.-H. see Dung, M.H. 56 (1991) 327
Chen, H.H. see Ruckenstein, E. 66 (1992) 205
Chen, H.-Y. see Lai, J.-Y. 66 (1992) 169
Chen, J.-S. and Rosenberger, F.
A general expression for the total release of diffusant through heterogeneous membranes 66 (1992) 241
Chen, L.-W. see Young, T.-H. 57 (1991) 69; 59 (1991) 169
Chen, L.-W. and Young, T.-H.
Effect of nonsolvents on the mechanism of wet-casting membrane formation from EVAL copolymers 59 (1991) 15
Chen, R.-Y. see Lee, K.-R. 75 (1992) 171
Chen, S.-H. see Lai, J.-Y. 74 (1992) 71
Chen, T. see Liu, W. 53 (1990) 203
Chen, V., Fane, A.G. and Fell, C.J.D.
The use of anionic surfactants for reducing fouling of ultrafiltration membranes: their effects and optimization 67 (1992) 249
Chen, W.-J. see Liu, C. 65 (1992) 113
Chen, Y. see Fouda, A. 64 (1991) 263
Cherif, A.T. see Elmidaoui, A. 67 (1992) 263
Chern, R.T. and Provan, C.N.
The effects of aryl-halogenation on the gas permeabilities of poly(phenolphthalein terephthalate) and poly(bisphenol A phthalate) 59 (1991) 293
Chern, R.T. and Gu, W.
Unequivocal definition and determination of "dissolved gas" permeability and resistances of the liquid layers in contact lens applications 69 (1992) 43
Chern, R.T. see Ghosal, K. 72 (1992) 91
Chertova, M.V. see Ilinitch, O.M. 66 (1992) 1

CUMULATIVE SUBJECT INDEX
VOLUMES 51–75

A

Acetate ion transport
Competition between the electrotransports of acetate and chloride ions through a polymeric anion exchange membrane 59 (1991) 265

Acetic acid/water mixtures
Pervaporation separation of aqueous mixtures using cross-linked polyvinyl alcohol membranes. III. Permeation of acetic acid–water mixtures 58 (1991) 33

Acid/base production
Electrodialysis water splitting technology 58 (1991) 117

Acid/base purification
Bipolar membranes for purification of acids and bases 61 (1991) 239

Acid recovery
Preparation of perfluorinated ion exchange membranes and their application in acid recovery 67 (1992) 263

Acoustic sensor
Bubble point measurements on large areas of microporous membranes 60 (1991) 253

Acrylonitrile–butadiene copolymers
Development of rubbery materials with excellent barrier properties to H_2, D_2 and T_2 52 (1990) 263

Acrylonitrile co-polymer membranes
Permeability and protein adsorption of modified charged acrylonitrile copolymer membranes 67 (1992) 283

Active pore size
Permporometry. The determination of the size distribution of active pores in UF membranes 71 (1992) 57

Active transport
Energetics of active transport in inverted membrane vesicles of *Escherichia coli* 56 (1991) 327

Numerical simulation for liquid membrane permeation of metal ions in a continuous countercurrent column 66 (1992) 27

Adduct
Poly(methyl methacrylate)/(DMF/metal salt) complex membrane for gas separation 74 (1992) 71

Adsorption
Transport and separation of proteins by ultrafiltration through sorptive snd non-sorptive membranes 69 (1992) 189

The diffusion mechanism in silicone rubber 73 (1992) 55

Ultrafiltration of protein solutions on ZrO_2 membranes. The influence of surface chemistry and solution chemistry on adsorption 74 (1992) 289

Adsorption, permeation, and diffusion of gases in microporous membranes. I. Adsorption of gases on microporous glass membranes 75 (1992) 221

Advancing front model
Multisolute extraction of organic acids by liquid membranes. I. Batch experiments and models 53 (1990) 71

Affinity membranes
Regenerated cellulose membrane from cuoxam/zincoxene blend 56 (1991) 207

Electrophoretic elution and adsorption: Investigations using microporous membrane immunoadsorbents 56 (1991) 247

Water flux and protein adsorption of a hollow fiber modified with hydroxyl groups 56 (1991) 289

Separation of proteins by surface modified polysulfone membranes 57 (1991) 175

Microporous poly(caprolactam) hollow fibers for therapeutic affinity adsorption 74 (1992) 115

Air drying
Hollow fiber air drying 72 (1992) 231

Air separation
Development of asymmetric hollow fibers from polyimides for air separation 75 (1992) 181

Development of asymmetric hollow fibers from polyimides for air separation 75 (1992) 181

Akali metal cations
Facilitated ion transport through thin bilayers 54 (1990) 259

Alcohol fermentation
Modelling of the behaviour of microporous membrane sensors used in the detection of volatile organic solutes in aqueous media 59 (1991) 249

Alcohol selectivity
Selectivity and characteristics of direct contact membrane distillation type experiment. I. Permeability and selectivity through dried hydrophobic fine porous membranes 72 (1992) 53

Alkali cation transport

Competitive, proton-coupled, alkali metal cation transport across polymer-supported liquid membranes containing sym-(decyl)-dibenzo-16-crown-5-oxyacetic acid: Variation of the alkyl 2-nitrophenyl ether membrane solvent 56 (1991) 195

Alkaline phosphatase
Activity of alkaline phosphatase bound to polysulfone membranes 60 (1991) 75

Alumina membranes
Methanol–hydrogen separation by capillary condensation in inorganic membranes 60 (1991) 185

Surface diffusion of hydrogen sulfide and sulfur dioxide in alumina membranes in the continuum regime 74 (1992) 263

Aluminium oxide membranes
Properties of microfiltration membranes. Part II. Adsorption of bovine serum albumin at aluminium oxide membranes 51 (1990) 189

Aluminum membranes
Preparation of a sol–gel derived thin membrane on a porous ceramic hollow fiber by the filtration technique 59 (1991) 73

Aluminum oxide films
Preparation and characterization of modified tubular ceramic membranes for use as catalyst supports 55 (1991) 199

Aluminum oxide membrane
Protein adsorption and fouling in ceramic ultrafiltration membranes 55 (1991) 21

Amber
The relative contribution of adsorption to the overall sorption and transport of small molecules in amber 60 (1991) 147

Amine-resistant composite membranes
Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. II. The binary systems ammonia–water, methylamine–water, 1-propanol–methanol and the ternary system 1-propanol–methanol–water 68 (1992) 127

Amino acid concentration
Concentration of amino acids by a liquid emulsion membrane with a cationic extractant 70 (1992) 225

Amino acid permeation
Thin and composite high-flux membranes of perfluorosulfonated ion-exchange polymer 54 (1990) 51

Amino acids
Water transport mechanisms in liquid emulsion membrane process for the separation of amino acids 51 (1990) 309

Electrokinetic transport of amino acids through a cation exchange membrane 75 (1992) 107

Amino acids, extraction of
Extraction of amino acids by emulsion liquid membranes containing di(2-ethylhexyl)phosphoric acid as a carrier 58 (1991) 11

Amino acids, transport of
Transport of amino acids through organic liquid membranes. II. Aspects of the mechanisms 65 (1992) 47

Transport of amino acids and their phosphonic acid analogues through supported liquid membranes containing macrocyclic carriers. Experimental parameters 56 (1991) 167

Electrotransport of alanine through ion-exchange membranes 69 (1992) 273

Ammonia removal from wastewater
Ammonia removal from water using microporous hollow fibers 51 (1990) 127

Ammonia, transport of
Specifics of highly selective ammonia transport through gas-separating membranes based on perfluorinated copolymer in the form of hollow fibers 59 (1991) 117

Amphiphilic polypeptide
pH-responsive permeability of polyamide capsule membrane coated with lipid molecules and amphiphilic polypeptides 58 (1991) 1

Amphoteric membranes
Transport number of an ion across an amphoteric ion-exchange membrane in $CaCl_2$–NaCl system 66 (1992) 235

Anesthesis
A quantitative representation of halothane solubility and mobility in brain tissue 72 (1992) 205

Aniline
Diffusion of aniline through perfluorosulfonate ion exchange membrane 65 (1992) 205

Effective diffusivity in W/O emulsion 68 (1992) 169

Anion exchange membranes
Polysulfone-based interpolymer anion exchange membrane 53 (1990) 37

Electrotransport of carbonate and hydrogen carbonate ions in anion exchange membranes 54 (1990) 63

Properties of ion exchange membranes anisotropically combined with conducting polymers. III. Formation of lithium cell composed of lithium and anion exchange membranes with polypyrrole layer 72 (1992) 43

Anisotropic membranes
An analytical solution of the steady state convective-diffusion equation with space dependent diffusion coefficient 71 (1992) 51

Antimony oxide membranes
Flow through porous media. Part XIII. Hydrodynamic flow studies of aqueous solutions of methanol, sucrose, sodium bicarbonate and their mixtures through antimony oxide membranes 62 (1991) 211

Antiport
Transport of nuclear acid bases through cation exchange membranes from poly(styrenesulfonic acid) and poly(vinyl alcohol) 61 (1991) 227

Antiradiation properties
Development of rubbery materials with excellent barrier properties to H_2, D_2 and T_2 52 (1990) 263

Apatite
Fouling of inorganic membranes during whey ultrafiltration: Analytical methodology 51 (1990) 293

Apple juice clarification
Permeate flux enhancement by pressure and flow pulsations in microfiltration with mineral membranes 70 (1992) 257

Approximate solutions
Approximate solutions for gas permeators separating binary mixtures 66 (1992) 103

Aqueous alcohol solution
Selectivity and characteristics of direct contact membrane distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

Aqueous liquid membranes
Selective separation of organic solutes by aqueous liquid surfactant membranes 59 (1991) 189

Aqueous mixtures
Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. I. Binary alcohol–water systems 68 (1992) 119

Aqueous–organic mixtures
Dehydration of organic mixtures by pervaporation. Experimental and theoretical studies on ternary- and multicomponent systems 61 (1991) 31

Aqueous pores
Transport through liquid membranes generated by lecithin, cholesterol and lecithin–cholesterol mixtures in the presence of prostaglandins 58 (1991) 211

Aromatics
Pervaporation of low volatility aromatics from water 53 (1990) 143

Arrhenius activation energy
Pervaporation separation of aqueous mixtures using cross-linked polyvinyl alcohol membranes. III. Permeation of acetic acid–water mixtures 58 (1991) 33

Artificial kidney
Chitosan membrane with covalently immobilized urease. Pore size distribution 61 (1991) 279

Characterization of hollow fiber hemodialysis membranes: pore size distribution and performance 73 (1992) 143

Aryl nitration
Aryl-nitration of poly(phenylene oxide) and polysulfone. Structural characterization and gas permeability 72 (1992) 91

Asymmetric membranes
Electrochemical properties of asymmetric cellulose acetate membranes 52 (1990) 57

The effects of carbon dioxide conditioning on the permeation behavior of hollow fiber asymmetric membranes 54 (1990) 103

Membranes for gas separation based on silylated polyphenylate oxide 55 (1991) 325

Studies in gas permeability and membrane gas separation in the Soviet Union 64 (1991) 191

Preparation of asymmetric gas separation membranes with high selectivity by a dual-bath coagulation method 70 (1992) 17

Characterization of membrane skin defects by gas permeation method 73 (1992) 47

Separation of supercritical CO_2 and ethanol mixtures with an asymmetric polyimide membrane 74 (1992) 131

Development of asymmetric hollow fibers from polyimides for air separation 75 (1992) 181

Asymmetric permeation
Selectivity and characteristics of direct contact membrane distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

Asymmetry
The detection of asymmetry in homogeneous membranes:

Demonstration on a carbon molecular sieve membrane 75 (1992) 213

The detection of asymmetry in homogeneous membranes: Demonstration on a carbon molecular sieve membrane 75 (1992) 213

Atomic force microscopy
Surface pore structures of micro- and ultrafiltration membranes imaged with the atomic force microscope 65 (1992) 101

The surface structure and morphology of polyvinylidene fluoride microfiltration membranes by atomic force microscopy 68 (1992) 65

Averaged transport coefficients
Coupling-constant description of coupled flow and diffusion 74 (1992) 253

B

Bacillus stearothermophilus
Chemical modification of crystalline ultrafiltration membranes and immobilization of macromolecules 61 (1991) 167

Bacterial cell surface layers
Chemical modification of crystalline ultrafiltration membranes and immobilization of macromolecules 61 (1991) 167

Bacteriorhodopsin
Modelling and kinetics of light induced proton pumping of bacteriorhodopsin reconstituted liposomes 61 (1991) 325

Phospholipid polymerization and reconstitution of bacteriorhodopsin in photopolymerizable lipid vesicles 72 (1992) 21

Barrier membranes
The skin as a barrier membrane: Relating *in vitro* measurements to *in vivo* behavior 52 (1990) 379

Gas barrier improvement using vermiculite and mica in polymer films 55 (1991) 173

The sorption of water vapor by an amorphous polyamide 65 (1992) 187

Barrier properties
Development of rubbery materials with excellent barrier properties to H_2, D_2 and T_2 52 (1990) 263

Basement membranes
Ultrafiltration properties of hydrogel analogues of basement membrane: A comparison of the pore theory and the fibre–matrix hypothesis 51 (1990) 141

Batch pervaporator
Separation of isopropanol from water by pervaporation using silicone-based membranes 74 (1992) 171

Batteries
Electrical resistivities and permeabilities of composite membranes based on a cation exchange membrane for a redox flow battery 51 (1990) 201

Modification of ion-exchange membrane surface by plasma process. Part 2. Monovalent cation permselective membrane from perfluorosulfonate cation exchange membrane 54 (1990) 163

Preparation of oxidatively stable cation-exchange membranes by the elimination of tertiary hydrogens 56 (1991) 143

Cation-exchange reaction with accompanying current discharge 70 (1992) 267

Battery, rechargeable
Properties of ion exchange membranes anisotropically combined with conducting polymers. III. Formation of lithium cell composed of lithium and anion exchange membranes with polypyrrole layer 72 (1992) 43

Bentonite filtration
Ultrafiltration of bentonite suspensions with hollow fiber membranes 74 (1992) 51

Benzoic acid release
Zero order release from glassy hydrogels. II. Matrix effects 54 (1990) 205

Benzyl alcohol
A study on pervaporation of aqueous benzyl alcohol solution by polydimethylsiloxane membrane 70 (1992) 249

Bias-voltage effect
Dielectric theory of concentration polarization. Relaxation of capacitance and conductance for electrolyte solutions with locally varying conductivity 64 (1991) 153

Dielectric analysis of concentration polarization phenomena at cation-exchange membrane/solution interfaces by frequency variation and d.c. bias application 64 (1991) 163

Binary mixtures

Approximate solutions for gas permeators separating binary mixtures 66 (1992) 103

Bioartificial membrane pancreas
Theoretical and experimental analysis of a hybrid bioartificial membrane pancreas: A distributed parameter model taking into account Starling fluxes 52 (1990) 351

Biocatalysis
Aqueous–organic membrane bioreactors. Part I. A guide to membrane selection 71 (1992) 139

Biocompatibility
A one-side hydrophilic polypropylene membrane prepared by plasma treatment 53 (1990) 275

Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

Biogas purification
A larger-scale study of gas separation by hollow-fiber-contained liquid membrane permeator 62 (1991) 293

Biological membranes
Energetics of active transport in inverted membrane vesicles of *Escherichia coli* 56 (1991) 327

A kinetic model for ion transport across skin 71 (1992) 257

A quantitative representation of halothane solubility and mobility in brain tissue 72 (1992) 205

Biological membrane structure
Principles of biological membrane structure: Alteration of the physical state of one side of the membrane by modulation of the physical state of the opposite side of the membrane 53 (1990) 3

Biomedical membranes
Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

Biomedical use
Composite membranes based on polyelectrolyte complexes 62 (1991) 131

Biomembrane analogs
Ultrafiltration properties of hydrogel analogues of basement membrane: A comparison of the pore theory and the fibre–matrix hypothesis 51 (1990) 141

Degree of coupling for composite membranes: studies on cholesterol liquid membranes 51 (1990) 337

Transport through liquid membranes generated by lecithin, cholesterol and lecithin–cholesterol mixtures in the presence of prostaglandins 58 (1991) 211

Photo-stimulated coupled transport of electrons and protons across quinone-doped liquid polymer-supported biomimetic membrane 59 (1991) 1

Transport of nuclear acid bases through cation exchange membranes from poly(styrenesulfonic acid) and poly(vinyl alcohol) 61 (1991) 227

Modelling and kinetics of light induced proton pumping of bacteriorhodopsin reconstituted liposomes 61 (1991) 325

Phospholipid polymerization and reconstitution of bacteriorhodopsin in photopolymerizable lipid vesicles 72 (1992) 21

Biomembrane model
Diffusion-reaction of urea through multimembrane containing urease – Effects of microenvironments around urease and asymmetry of the membrane 54 (1990) 145

Biomimetic membranes
Photo-stimulated coupled transport of electrons and protons across quinone-doped liquid polymer-supported biomimetic membrane 59 (1991) 1

Partially cationized cellulose for non-thrombogenic membrane in the presence of heparin and endothelial-cell-surface-heparansulfate (ES–HS) 61 (1991) 253

Fluctuations of biomimetic membranes potential and membrane lysis, induced by surface-active glycine esters 66 (1992) 143

Bioreactors
Theoretical and experimental analysis of a hybrid bioartificial membrane pancreas: A distributed parameter model taking into account Starling fluxes 52 (1990) 351

Structural and enzymatic characterizations of papain immobilized onto vinyl alcohol/vinyl butyral copolymer membrane 66 (1992) 247

Biosensors
Electrode responses to phenolic species through cellulosic membranes 57 (1991) 83

Transport of monocharged ions through environment-sensitive composite membranes based on polyelectrolyte complexes 62 (1991) 117

Polymeric membranes and coupled enzymes in the design of biosensors 68 (1992) 217

Biosynthetic membranes
Modelling and kinetics of light induced proton pumping of bacteriorhodopsin reconstituted liposomes 61 (1991) 325

Biotechnology
Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

Protein adsorption and fouling in ceramic ultrafiltration membranes 55 (1991) 21

Separation of proteins from polyelectrolyes by ultrafiltration 55 (1991) 181

Water flux and protein adsorption of a hollow fiber modified with hydroxyl groups 56 (1991) 289

Continuous membrane fermentor separator for ethanol fermentation 57 (1991) 21

Extraction of amino acids by emulsion liquid membranes containing di(2-ethylhexyl)phosphoric acid as a carrier 58 (1991) 11

Modelling of the behaviour of microporous membrane sensors used in the detection of volatile organic solutes in aqueous media 59 (1991) 249

Coupled transport of amino acids through a supported liquid membrane. I. Experimental optimization 73 (1992) 203

Removal of *p*-nitrophenol from aqueous solution by membrane-supported solvent extraction 75 (1992) 277

Bipolar membranes
Electrodialysis water splitting technology 58 (1991) 117

Bipolar membranes for purification of acids and bases 61 (1991) 239

Bipolar reverse osmosis membrane for separating mono- and divalent ions 70 (1992) 153

Effects of temperature and ion transport on water splitting in bipolar membranes 73 (1992) 191

Black liquor
Limiting flux phenomena in ultrafiltration of kraft black liquor 57 (1991) 187

Blend membranes
Enhancement of membrane performance with employment of cellulose acetate blend 66 (1992) 79

Block-copolymers
Novel poly(silicon olefins) for gas separations 52 (1990) 289

Charge-mosaic membrane from gamma-irradiated poly(styrene–butadiene–4-vinylpyridine)triblock copolymer. II. Preliminary dialysis test 71 (1992) 129

Blocking
Mechanisms of facilitation and blocking in gramicidin channels by impermeant ions 66 (1992) 157

Block polymers
Pervaporation of low volatility aromatics from water 53 (1990) 143

Blood microfiltration
Kinetics of concentration-polarization formation in cross-flow filtration of plasma from blood: experimental results 72 (1992) 267

Blood oxygenators
Mass transfer in various hollow fiber geometries 69 (1992) 235

Bombyx mori
Porous membrane of *Bombyx mori* silk fibroin: structure characterization, physical properties and application to glucose oxidase immobilization 59 (1991) 39

Book reviews
Modern Chlor-Alkali Technology 51 (1990) 227

Future Industrial Prospects of Membrane Processes 52 (1990) 115

Fouling and Cleaning in Food Processing 53 (1990) 299

Water Movement through Lipid Bilayers, Pores, and Plasma Membranes. Theory and Reality 54 (1990) 229

Gas separation technology 57 (1991) 337

Absorbent Polymer Technology 69 (1992) 185

Tradenames (trademarks) in the field of membrane techiniques 69 (1992) 283

Pervaporation Membrane Separation Processes 71 (1992) 175

Basic Principles of Membrane Technology 72 (1992) 304

Boron, separation of isotopes
Counter-current recycle membrane cascades for the separation of the boron isotopes in BF_3 54 (1990) 307

Boundary layer resistance
Effect of boundry layer mass transfer resistance in the pervaporation of dilute organics 65 (1992) 147

Unequivocal definition and determination of "dissolved gas" permeability and resistances of the liquid layers in contact lens applications 69 (1992) 43

General treatment of liquid-phase boundary layer resistance in the pervaporation of dilute aqueous organics through tubular membranes 75 (1992) 29

Bovine serum albumin
Protein type effects on steady-state crossflow membrane ultrafiltration fluxes and protein transmission 70 (1992) 177

Bovine serum albumin, adsorption of
Properties of microfiltration membranes. Part II. Adsorption of bovine serum albumin at aluminium oxide membranes 51 (1990) 189

Brain tissue
A quantitative representation of halothane solubility and mobility in brain tissue 72 (1992) 205

Breakthrough pressure
Aqueous–organic membrane bioreactors. Part I. A guide to membrane selection 71 (1992) 139

Brine solution
An integrated electrodialysis–evaporation process for the treatment of aqueous process streams containing electrolytes 52 (1990) 43

Bubble point
Bubble point measurements on large areas of microporous membranes 60 (1991) 253

Buoyant density
Effects of pH and solvent density on dead-end upward ultrafiltration 69 (1992) 87

Butanols
Pervaporation of isomeric butanols 54 (1990) 1

C

***γ*-ray irradiation**
Preparation and properties of vinyl acetate-grafted Nylon 6 membrane by using homografting method 66 (1992) 169

Cake formation
Ultrafiltration of bentonite suspensions with hollow fiber membranes 74 (1992) 51

Calcium ions
Mechanisms of facilitation and blocking in gramicidin channels by impermeant ions 66 (1992) 157

Calcium ion transport
Selective transport of calcium ion from a mixed cation solution through an HDEHP/n-dodecane supported liquid membrane 64 (1991) 69

Capillary geometry
Dynamics of washing-out dialyzers with hollow-fiber membranes 58 (1991) 201

Capsule membranes, lipase immobilized
Functional capsule membranes. Part 32. Lipase-immobilized capsule membranes as a reactor in ester syntheses and hydrolyses in organic solvents 59 (1991) 101

Carbonate, transport of
Electrotransport of carbonate and hydrogen carbonate ions in anion exchange membranes 54 (1990) 63

Carbon dioxide conditioning
The effects of carbon dioxide conditioning on the permeation behavior of hollow fiber asymmetric membranes 54 (1990) 103

Carbon dioxide, effect of exposure to
Characterization of CO_2-induced conditioning of substituted polycarbonates using various "exchange" penetrants 51 (1990) 233

Carbon dioxide transport
Non-equilibrium microstructural and transport characteristics of glassy poly(ethylene terephthalate) 60 (1991) 41

Carbon immobilization
Gas separation membranes containing carbon immobilized by photochemical grafting onto polymers 55 (1991) 273

Carbon membranes
The detection of asymmetry in homogeneous membranes: Demonstration on a carbon molecular sieve membrane 75 (1992) 213

Carboxylic fluorine containing polymers
Radiation synthesis of ion-exchange carboxylic fluorine containing membranes 68 (1992) 133

Carrier mediated transport
Design of a liquid membrane system for extracting rare earths 51 (1990) 249

Carriers
Silver nitrate refining using supported liquid membranes 54 (1990) 299

Membrane extraction of silver by di(2-ethylhexyl)dithiophosphoric acid 70 (1992) 31

Transport of metals through gelled supported liquid membranes containing carrier 71 (1992) 41

Carrier, selective
A novel tetradentate hydroxamate as ion carrier in liquid membranes 69 (1992) 143

Carriers, synthetic

A novel tetradentate hydroxamate as ion carrier in liquid membranes 69 (1992) 143

Cascade
Using multistage techniques to improve diafiltration fractionation efficiency 72 (1992) 1

Catalytic membranes
Pervaporation membranes endowed with catalytic properties, based on polymer blends 73 (1992) 129

Cation exchange membranes
Electrical resistivities and permeabilities of composite membranes based on a cation exchange membrane for a redox flow battery 51 (1990) 201

Binary and ternary interdiffusion of counter ions across cation exchange membrane 52 (1990) 143

A diffusion model of Donnan dialysis under flow conditions 53 (1990) 45

Estimation of equilibrium compositions in dialysis of aqueous solutions of metal sulfates, $MeSO_4$, on cation-exchange membranes 60 (1991) 157

Transport of nuclear acid bases through cation exchange membranes from poly(styrenesulfonic acid) and poly(vinyl alcohol) 61 (1991) 227

Preparation of redox cell properties of cation exchange membrane combined anisotropically with polypyrrole 66 (1992) 289

Cation-exchange reaction with accompanying current discharge 70 (1992) 267

Ion transfer across electrodialysis membranes in the overlimiting current range: stationary voltage current characteristics and current noise power spectra under different conditions of free convection 71 (1992) 105

Transport competition between proton and cupric ion through a cation-exchange membrane. I. Equilibrium properties of the system: membrane–$CuSO_4 + H_2SO_4$ solution 71 (1992) 181

Ion transfer across electrodialysis membranes in the overlimiting current range: chronopotentiometric studies 72 (1992) 171

Cationic/anionic membranes
Cationic/anionic interpenetrating polymer network membranes for the pervaporation of ethanol–water mixture 52 (1990) 157

Cationic extractant
Concentration of amino acids by a liquid emulsion membrane with a cationic extractant 70 (1992) 225

Cation transport
Binary and ternary interdiffusion of counter ions across cation exchange membrane 52 (1990) 143

Celgard membrane support
Application of supported liquid membranes for removal of nitrate, technetium (VII) and chromium (VI) from groundwater 55 (1991) 39

Stability of supported liquid membranes containing long-chain aliphatic amines as carriers 55 (1991) 65

Celgard porous polypropene membranes
Synthesis of reactive composite membranes from Celgard 2400 and methacrylate monomers 67 (1992) 289

Cell culture
Membrane reactor with double mass transfer: membrane requirements, fouling analysis and flux prediction during ultrafiltration of cell culture medium 69 (1992) 259

Cellobiose, hydrolysis of
Membrane reactors for the investigation of product inhibition of enzyme activity 52 (1990) 339

Cell recycling
Ultrafiltration membrane cell recycle for continuous culture of *Propionibacterium* 61 (1991) 303

Cellulose acetate membranes
Study of solute rejection models for thin film composite polyamide RO membranes 52 (1990) 19

Electrochemical properties of asymmetric cellulose acetate membranes 52 (1990) 57

Micromolecular transport in oriented glassy polymer films studied by a variety of techniques 52 (1990) 325

Surface-enhanced Raman scattering (SERS) using polymer (cellulose acetate and Nafion) membranes impregnated with fine silver particles 55 (1991) 227

Enhanced nitrate ultrafiltration by cationic surfactant 56 (1991) 1

The influence of nonionic and ionic surfactants on hydrophobic and hydrophilic ultrafiltration membranes 56 (1991) 49

Limiting flux phenomena in ultrafiltration of kraft black liquor 57 (1991) 187

Reverse osmosis cellulose acetate membranes. I. Rate of hydrolysis 59 (1991) 305

Reverse osmosis cellulose acetate membranes. II. Dependence of transport properties on acetyl content 59 (1991) 317

Effect of permeate to feed ratio on protein recovery in membrane plasma fractionation 60 (1991) 87

Mass transfer in ultrafiltration 61 (1991) 49

Cellulose acetate membranes, modification of
The effects of transition metal complexes on the permeation of small gas molecules through cellulose acetate membranes 60 (1991) 207

Cellulose based membranes
Electrode responses to phenolic species through cellulosic membranes 57 (1991) 83

Cellulose membranes
Separation of proteins from polyelectrolyes by ultrafiltration 55 (1991) 181

A new transport model for pervaporation 59 (1991) 133

Cellulose membranes, modified
Dynamics of washing-out dialyzers with hollow-fiber membranes 58 (1991) 201

Enzymatic synthesis of n-butyl oleate in a hollow fiber membrane reactor 61 (1991) 315

Cellulose membranes, regenerated
The fine-structure of ultrafiltration membranes. I. Clean membranes 62 (1991) 75

The fine-structure of ultrafiltration membranes. II. Protein fouled membranes 62 (1991) 87

Cellulose triacetate membranes
A new evaluation of membrane processes for the oxygen-enrichment of air. I. Identification of optimum operating conditions and process configuration 62 (1991) 13

A new evaluation of membrane processes for the oxygen-enrichment of air. II. Effects of economic parameters and membrane properties 62 (1991) 37

Cellulosic membranes
Investigation of the separation factor between light and heavy water in the liquid/vapor membrane permeation process 55 (1991) 257

Ceramic membranes
Protein adsorption and fouling in ceramic ultrafiltration membranes 55 (1991) 21

Preparation and characterization of modified tubular ceramic membranes for use as catalyst supports 55 (1991) 199

Momentum and mass transfer during ultrafiltration of dextran with tubular mineral membranes in turbulent flow regime 56 (1991) 29

Hydrogen permeable palladium–silver alloy membrane supported on porous ceramics 56 (1991) 315

Preparation of a sol–gel derived thin membrane on a porous ceramic hollow fiber by the filtration technique 59 (1991) 73

Methanol–hydrogen separation by capillary condensation in inorganic membranes 60 (1991) 185

Dynamic microfiltration of dilute slurries with a rotating ceramic membrane 62 (1991) 187

Experimental verification of the shear-induced hydrodynamic diffusion model of crossflow microfiltration 62 (1991) 249

Gas separation by silicon based inorganic membrane at high temperature 66 (1992) 119

Oxygen semipermeable solid oxide membrane composites prepared by electrochemical vapor deposition 66 (1992) 211

Gas transport and separation with ceramic membranes. Part I. Multilayer diffusion and capillary condensation 66 (1992) 259

Gas transport and separation with ceramic membranes. Part II. Synthesis and separation properties of microporous membranes 66 (1992) 271

Modelling macromolecular diffusion through a porous medium 68 (1992) 93

A study of pore size distribution and mean pore size on unsupported gamma-alumina membranes prepared by modifications introduced in the alkoxide hydrolysis step 69 (1992) 21

Synthesis and characterization of unsupported ferric oxide ceramic membranes 70 (1992) 41

Transport studies with porous alumina membranes 71 (1992) 247

A new class of oxygen selective chemically driven nonporous ceramic membranes. Part I. A-site doped perovskites 75 (1992) 151

Cesium ion
Effects of alkali metal cation on myoblast membrane electrical properties during *in vitro* myogenic fusion 65 (1992) 7

Channel spacer design
Optimal channel spacer design for ultrafiltration 62 (1991) 275

Charge density
An experimental study of ion permeation in multicompo-

nent ion systems as a function of membrane charge density 64 (1991) 255

Charged membranes
Permselectivity of ionic solutes across charged dialysis membranes: *In vitro* and *in vivo* diffusive mass transfer 52 (1990) 191

Theory study of the effect of ion adsorption on membrane potential and its application to collodion membranes 53 (1990) 19

Polysulfone-based interpolymer anion exchange membrane 53 (1990) 37

Electrical conductivity of cationic poly(vinyl alcohol) membranes having quaternary ammonium groups 64 (1991) 247

An experimental study of ion permeation in multicomponent ion systems as a function of membrane charge density 64 (1991) 255

Permeability and protein adsorption of modified charged acrylonitrile copolymer membranes 67 (1992) 283

Bipolar reverse osmosis membrane for separating mono- and divalent ions 70 (1992) 153

Charge mosaic composite membranes
Charge mosaic composite membranes constructed by phase growth 54 (1990) 75

Transport of electrolytes through charge mosaic composite membranes 65 (1992) 129

Charge-mosaic membrane from gamma-irradiated poly(styrene–butadiene–4-vinylpyridine)triblock copolymer. II. Preliminary dialysis test 71 (1992) 129

Chelating membranes
Metal collection using chelating hollow fiber membrane 58 (1991) 221

Chemically driven transport
A new class of oxygen selective chemically driven nonporous ceramic membranes. Part I. A-site doped perovskites 75 (1992) 151

Chemical modification
Metal collection using chelating hollow fiber membrane 58 (1991) 221

Sorption and transport of CO_2 and CH_4 in chemically modified poly(phenylene oxide) 67 (1992) 191

Chitosan gel
Effect of crosslinking agent on the release of an aqueous marker from liposomes sequestered in collagen and chitosan gels 71 (1992) 161

Chitosan membranes
Chitosan membrane with covalently immobilized urease. Pore size distribution 61 (1991) 279

Pervaporation separation of water–ethanol through modified chitosan membranes. IV. Phosphorylated chitosan membranes 64 (1991) 145

Concentration of aqueous dimethyl sulfoxide solutions through a chitosan membrane by permeation with a temperature difference 74 (1992) 183

Chlor–alkali
Radiation synthesis of ion-exchange carboxylic fluorine containing membranes 68 (1992) 133

Barriers to flow in semicrystalline ionomers. A procedure for preparing melt-processed perfluorosulfonate ionomer films and membranes 75 (1992) 7

Chloride ion transport
Transport properties of anion exchange membranes in contact with hydrochloric acid solutions. Membranes for acid recovery by electrodialysis 57 (1991) 57

Competition between the electrotransports of acetate and chloride ions through a polymeric anion exchange membrane 59 (1991) 265

Chloromethanes
Vapour sorption and permeation properties of poly(dimethylsiloxane) films 61 (1991) 85

Cholesterol
Degree of coupling for composite membranes: studies on cholesterol liquid membranes 51 (1990) 337

Transport through liquid membranes generated by lecithin, cholesterol and lecithin–cholesterol mixtures in the presence of prostaglandins 58 (1991) 211

Chromatography
Electrophoretic elution and adsorption: Investigations using microporous membrane immunoadsorbents 56 (1991) 247

Membrane pore characterization – comparison between single and multicomponent solute probe techniques 57 (1991) 271

Chronopotentiometry

Ion transfer across electrodialysis membranes in the overlimiting current range: chronopotentiometric studies 72 (1992) 171

Coagulation
Fouling in tangential-flow ultrafiltration: The effect of colloid size and coagulation pretreatment 52 (1990) 173

Coating effect
Selectivity and characteristics of direct contact membrane distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

Coatings
Gas barrier improvement using vermiculite and mica in polymer films 55 (1991) 173

Cobalt
Facilitated diffusion in immobilized liquid membranes: Experimental verification of the "jumping" mechanism and percolation threshold in membrane transport 75 (1992) 1

Cobalt extraction
A new liquid membrane technology - Electrostatic pseudo liquid membrane 52 (1990) 77

Collagen film
Collagen film as a new pervaporation membrane 61 (1991) 269

Collagen gel
Effect of crosslinking agent on the release of an aqueous marker from liposomes sequestered in collagen and chitosan gels 71 (1992) 161

Collodion-based membranes
Relaxation of polymer chains dissolved in the liquid phase of membranes. I. Electroosmosis with oxidized collodion and collodion–poly(acrylic acid) membranes 58 (1991) 59

Collodion membranes
Theory study of the effect of ion adsorption on membrane potential and its application to collodion membranes 53 (1990) 19

Colloid size
Fouling in tangential-flow ultrafiltration: The effect of colloid size and coagulation pretreatment 52 (1990) 173

Competitive facilitated transport
An analytical solution for competitive facilitated membrane transport 65 (1992) 39

Complexation
Separation by coupling ultrafiltration and complexation of metallic species with industrial water soluble polymers. Application for removal or concentration of metallic cations 73 (1992) 313

Complex formation
Poly(methyl methacrylate)/(DMF/metal salt) complex membrane for gas separation 74 (1992) 71

Composite membranes
Degree of coupling for composite membranes: studies on cholesterol liquid membranes 51 (1990) 337

Pervaporation process using a thermal gradient as the driving force 53 (1990) 127

Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

The kinetics of the formation of a deposited layer during the reverse osmosis of skim milk 54 (1990) 13

Thin and composite high-flux membranes of perfluorosulfonated ion-exchange polymer 54 (1990) 51

Charge mosaic composite membranes constructed by phase growth 54 (1990) 75

Analysis of some cases of pseudo-azeotropes in pervaporation 55 (1991) 1

Surface fluorination of composite membranes. Part 1. Transport properties 55 (1991) 131

Surface fluorination of composite membranes. Part II. Characterization of the fluorinated layer 55 (1991) 149

Gas barrier improvement using vermiculite and mica in polymer films 55 (1991) 173

Surface fluorination of polysulfone asymmetric membranes and films 56 (1991) 77

Preparation of oxidatively stable cation-exchange membranes by the elimination of tertiary hydrogens 56 (1991) 143

Separation of hydrogen through palladium thin film supported on a porous glass tube 56 (1991) 303

Hydrogen permeable palladium–silver alloy membrane supported on porous ceramics 56 (1991) 315

Improvement of oxygen permselectivity through polydimethylsiloxane and poly(1-trimethylsilylpropyne) films by the addition of a small amount of poly(trifluoromethyl substituted arylacetylene) 57 (1991) 207

Molecular sieving effect of the zeolite-filled silicone rubber membranes in gas permeation 57 (1991) 289

The permeation of gases through a poly(ethylene terephthalate) membrane deposited with SiO_2 59 (1991) 353

Preparation of water and alkali durable porous glass mem-

brane coated on porous alumina tubing by sol–gel method 60 (1991) 307

Analysis of gas permeation through composite membranes 61 (1991) 1

Influence of composite membrane structure on pervaporation 61 (1991) 19

Inorganic ultrafiltration membranes prepared by a combination of anodic film and sol–gel technologies 61 (1991) 215

Transport of monocharged ions through environment-sensitive composite membranes based on polyelectrolyte complexes 62 (1991) 117

Composite membranes based on polyelectrolyte complexes 62 (1991) 131

Electrical impedance of composite membranes based on polyelectrolyte complexes 62 (1991) 145

Studies in gas permeability and membrane gas separation in the Soviet Union 64 (1991) 191

Electrochemical synthesis of ultrathin film composite membranes 65 (1992) 113

Transport of electrolytes through charge mosaic composite membranes 65 (1992) 129

Preparation of hollow fiber membranes from polyetherimide for gas separation 65 (1992) 295

Gas separation by silicon based inorganic membrane at high temperature 66 (1992) 119

Gas separation properties of a new polymer/inorganic composite membrane 66 (1992) 129

Composite membranes prepared by concentrated emulsion polymerization and their use for pervaporation separation of water–acetic acid mixtures 66 (1992) 205

Transport of water through an inorganic composite membrane 66 (1992) 227

Preparation of redox cell properties of cation exchange membrane combined anisotropically with polypyrrole 66 (1992) 289

Biased diffusion across ion-exchange membranes. Percolation theory approach 67 (1992) 273

Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. I. Binary alcohol–water systems 68 (1992) 119

The separation of water and ethanol by pervaporation with PVA–PAN composite membranes 68 (1992) 141

Direct heating of composite membranes in pervaporation and gas separation processes 68 (1992) 293

Reverse osmosis of whey. Determination of mass transfer coefficients 68 (1992) 301

Determination of some transport coefficients for the skin and porous layer of a composite membrane 69 (1992) 29

Transport of a zwitter ion across a composite ion-exchange membrane involving the dual sorption mechanism 69 (1992) 51

Pervaporation membranes for ethanol–water mixture prepared by plasma polymerization of fluorocarbons. II. Perfluoropropane membranes 69 (1992) 109

Sorption isotherms of alcohols in zeolite-filled silicone rubber and in PVA-composite membranes 70 (1992) 75

Separation of hydrogen from silane via membranes: A step in the production of ultra-high-purity silicon 70 (1992) 143

Relation between gas permselectivity and permeability in a bilayer composite membrane 71 (1992) 169

Preliminary investigation of thin film composite reverse osmosis membranes developed from SAN as support membranes 71 (1992) 201

Properties of ion exchange membranes anisotropically combined with conducting polymers. III. Formation of lithium cell composed of lithium and anion exchange membranes with polypyrrole layer 72 (1992) 43

The characteristics of a PAA–PSf composite membrane for separation of water–ethanol mixtures through pervaporation 72 (1992) 259

Effect of membrane structure and protein concentration on the osmotic reflection coefficient 72 (1992) 277

Preparation and characterization of thin-film zeolite–PDMS composite membranes 73 (1992) 119

Pervaporation membranes endowed with catalytic properties, based on polymer blends 73 (1992) 129

Preparation of composite membranes by a spin coating process 74 (1992) 233

Composite membranes, metal oxide based
Metal and metal oxides based membrane composites for solid polymer electrolyte water electrolysers 61 (1991) 157

Composite RO membranes
Study of solute rejection models for thin film composite polyamide RO membranes 52 (1990) 19

Compressible flow
Adsorption, permeation, and diffusion of gases in micro-

porous membranes. II. Permeation of gases in microporous glass membranes 75 (1992) 233

Computer modelling
Modelling of the diffusion of carbon dioxide in polyimide matrices by computer simulation 73 (1992) 247

Computer simulation
Effect of enzyme concentration on the dynamic behavior of a membrane-bound enzyme system 70 (1992) 237

Kinetics of membrane-bound enzymes: Validity of quasi-steady-state approximation for a Michaelis–Menten-type reaction 74 (1992) 159

Concentrated emulsion polymerization
Composite membranes prepared by concentrated emulsion polymerization and their use for pervaporation separation of water–acetic acid mixtures 66 (1992) 205

Concentration polarization
Electrochemical properties of asymmetric cellulose acetate membranes 52 (1990) 57

Competitive diffusion of hydrochloric acid and sodium chloride through an acid dialysis membrane 55 (1991) 79

Separation of proteins from polyelectrolyes by ultrafiltration 55 (1991) 181

A stability model for the striping phenomenon in ultrafiltration 57 (1991) 43

Concentration polarization in ion exchange membrane electrodialysis 57 (1991) 217

Concentration polarisation build-up in hollow fibers: a method of measurement and its modelling in ultrafiltration 59 (1991) 81

Competition between the electrotransports of acetate and chloride ions through a polymeric anion exchange membrane 59 (1991) 265

Concentration polarisation in a constant flux ultrafiltration rig: prediction of bulk protein concentrations using a lumped parameter model 59 (1991) 277

Current–voltage curves for ion-exchange membranes. Contributions to the total potential drop 61 (1991) 177

Dielectric theory of concentration polarization. Relaxation of capacitance and conductance for electrolyte solutions with locally varying conductivity 64 (1991) 153

Dielectric analysis of concentration polarization phenomena at cation-exchange membrane/solution interfaces by frequency variation and d.c. bias application 64 (1991) 163

Effect of boundry layer mass transfer resistance in the pervaporation of dilute organics 65 (1992) 147

Water transport in cation exchange membranes 66 (1992) 179

Dextran transport through asymmetric ultrafiltration membranes: Comparison with hydrodynamic models 68 (1992) 21

Predicting permeate flux in ultrafiltration on the basis of surface renewal concept 68 (1992) 107

Effect of transmembrane pressure pulsing on concentration polarization 68 (1992) 149

Concentration effects on membrane sieving: development of a stagnant film model incorporating the effects of solute–solute interactions 68 (1992) 183

Refractometric measurement of polarized layer structure: studies of hyaluronic acid ultrafiltration 68 (1992) 249

Transport and separation of proteins by ultrafiltration through sorptive snd non-sorptive membranes 69 (1992) 189

Electrotransport of alanine through ion-exchange membranes 69 (1992) 273

Ion transfer across electrodialysis membranes in the over-limiting current range: stationary voltage current characteristics and current noise power spectra under different conditions of free convection 71 (1992) 105

Prediction of limiting flux in ultrafiltration of kraft black liquor 72 (1992) 137

Reverse osmosis treatment of multicomponent electrolyte solutions 72 (1992) 211

Kinetics of concentration-polarization formation in cross-flow filtration of plasma from blood: experimental results 72 (1992) 267

The transversal flow microfiltration module. Theory, design, realization and experiments 73 (1992) 153

Unsteady-state flux behaviour in relation to the presence of a gel layer 73 (1992) 231

Calculation of the entrance length of the concentration boundary layer in ultrafiltration and its influence on scale-up 74 (1992) 37

Determination of osmotic pressure and fouling resistances and their effects on performance of ultrafiltration membranes 74 (1992) 141

General treatment of liquid-phase boundary layer resis-

tance in the pervaporation of dilute aqueous organics through tubular membranes 75 (1992) 29

An investigation on the configuration of inserts in tubular ultrafiltration module to control concentration polarization 75 (1992) 197

Conditioning
The effects of carbon dioxide conditioning on the permeation behavior of hollow fiber asymmetric membranes 54 (1990) 103

Pervaporation process: membrane conditioning and experimental mass transfer analysis 74 (1992) 105

Conducting polymers
Switchable gate membranes. Conducting polymer films for the selective transport of neutral solution species 70 (1992) 9

Properties of ion exchange membranes anisotropically combined with conducting polymers. III. Formation of lithium cell composed of lithium and anion exchange membranes with polypyrrole layer 72 (1992) 43

Conformational structure
Conformer isomerization kinetics in glassy amorphous poly(ethylene terephthalate) and their effect on penetrant sorption 72 (1992) 103

The effects of glassy microstructure on small molecule transport in amorphous poly(ethylene terephthalate) 72 (1992) 119

Constant flux ultrafiltration
Concentration polarisation in a constant flux ultrafiltration rig: prediction of bulk protein concentrations using a lumped parameter model 59 (1991) 277

Contact angle
Contact angles of ultrafiltration membranes and their possible correlation to membrane performance 72 (1992) 293

Characterization of plasma-treated poly(hydroxybutyrate) membrane surfaces by ESCA and contact angle measurements 73 (1992) 163

Contact lenses
Unequivocal definition and determination of "dissolved gas" permeability and resistances of the liquid layers in contact lens applications 69 (1992) 43

Continuous culture
Ultrafiltration membrane cell recycle for continuous culture of *Propionibacterium* 61 (1991) 303

Continuous porous membrane permeator
Continuous vapor–gas separation with a porous membrane permeation system 59 (1991) 53

Continuum regime
Surface diffusion of hydrogen sulfide and sulfur dioxide in alumina membranes in the continuum regime 74 (1992) 263

Controlled release
Release kinetics of pendant substituted bioactive molecules from swellable hydrogels: role of chemical reaction and diffusive transport 51 (1990) 83

Zero order release from glassy hydrogels. II. Matrix effects 54 (1990) 205

Zero order release from swollen hydrogels 54 (1990) 221

Encapsulation by interfacial polycondensation. I. The capsule production and a model for wall growth 65 (1992) 59

Encapsulation by interfacial polycondensation. II. The membrane wall structure and the rate of the wall growth 65 (1992) 69

Sorption and transport of ethanol and water in poly(ethylene-co-vinyl acetate) membranes 69 (1992) 223

Effect of crosslinking agent on the release of an aqueous marker from liposomes sequestered in collagen and chitosan gels 71 (1992) 161

Convective-diffusion equation
An analytical solution of the steady state convective-diffusion equation with space dependent diffusion coefficient 71 (1992) 51

Convective flow rate
Concentration polarization in ion exchange membrane electrodialysis 57 (1991) 217

Copolymer membranes
Effect of nonsolvents on the mechanism of wet-casting membrane formation from EVAL copolymers 59 (1991) 15

Copper extraction
Effect of anionic surfactant on copper extraction with N-8-quinolyl-*p*-dodecylbenzenesulfonamide in a hollow fiber membrane extractor 53 (1990) 287

Copper transport
Membrane material effect on copper coupled transport through liquid membranes 64 (1991) 129

Specific membrane transport of copper(II) ion by a coop-

erative carrier composed of 1,7-diaza-15-crown-5 and palmitic acid 75 (1992) 61

Corn roots, ion fluxes in
Ion fluxes in corn roots measured by microelectrodes with ion-specific liquid membranes 53 (1990) 59

Countercurrent column operation
Numerical simulation for liquid membrane permeation of metal ions in a continuous countercurrent column 66 (1992) 27

Counter-current recycle cascades
Counter-current recycle membrane cascades for the separation of the boron isotopes in BF_3 54 (1990) 307

Coupled, facilitated transport
Recovery of citric acid from fermentation beer using supported-liquid membranes 56 (1991) 127

Selective transport of lithium ions by an acyclic carboxylic ionophore with a quinaldate moiety through a bulk liquid membrane 57 (1991) 297

Extraction of amino acids by emulsion liquid membranes containing di(2-ethylhexyl)phosphoric acid as a carrier 58 (1991) 11

Transport of nuclear acid bases through cation exchange membranes from poly(styrenesulfonic acid) and poly(vinyl alcohol) 61 (1991) 227

Membrane material effect on copper coupled transport through liquid membranes 64 (1991) 129

Nitrate removal using supported liquid membranes: transport mechanism 67 (1992) 107

Supported liquid membranes: instability effects 67 (1992) 121

Mechanism of supported liquid membrane degradation: emulsion formation 67 (1992) 133

Supported liquid membranes: stabilization by gelation 67 (1992) 149

New applications of crown ethers. 11. Structural effect of the counter anion on crown-ether mediated cation extraction and transport. A direct examination of the crown ether–cation complex in the organic phase of extraction and transport 69 (1992) 61

New applications of crown ethers. 12. "Double-cycle" transport mechanism for crown ether/2,6-di(*t*-butyl)-4-nitrophenol/alkylammonium salt system. Effect of reversed-micelle like aggregate of alkylammonium salts on cation transport through a liquid membrane 69 (1992) 75

A physicochemical study of reverse transport system based on nonequilibrium thermodynamics 70 (1992) 277

Coupled transport of amino acids through a supported liquid membrane. I. Experimental optimization 73 (1992) 203

Coupled transport
Competitive, proton-coupled, alkali metal cation transport across polymer-supported liquid membranes containing sym-(decyl)-dibenzo-16-crown-5-oxyacetic acid: Variation of the alkyl 2-nitrophenyl ether membrane solvent 56 (1991) 195

Pervaporation of aromatic C_8-isomers 57 (1991) 257

Facilitated extraction and facilitated transport of non-ionic permeants through ion-exchange membranes: influence of the stability of the permeant/carrier complexes 61 (1991) 191

Interaction of composite membranes based on polyelectrolyte complexes with copper ions 62 (1991) 155

Critical pressure
Critical displacement pressure of a supported liquid membrane 75 (1992) 69

Crossflow
Hydrodynamic aspects of crossflow microfiltration. Analysis of particle deposition at the membrane surface 71 (1992) 29

Crossflow filtration
Prediction of steady state crossflow filtration using a force balance model 68 (1992) 205

Crossflow microfiltration
Experimental verification of the shear-induced hydrodynamic diffusion model of crossflow microfiltration 62 (1991) 249

Application of crossflow microfiltration to emulsion separation in extraction processes 72 (1992) 245

Crosslink density
Variable permeability membranes: Network structure of poly(methacrylic acid) and its relation to diffusive transport 58 (1991) 153

Crosslinking
Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. II. Effect of crosslinked state and annealing 75 (1992) 15

Crown ether ionophores
Facilitated ion transport through thin bilayers 54 (1990) 259

Crown ethers
Competitive, proton-coupled, alkali metal cation transport across polymer-supported liquid membranes containing sym-(decyl)-dibenzo-16-crown-5-oxyacetic acid: Varia-

tion of the alkyl 2-nitrophenyl ether membrane solvent 56 (1991) 195

New applications of crown ethers. 11. Structural effect of the counter anion on crown-ether mediated cation extraction and transport. A direct examination of the crown ether–cation complex in the organic phase of extraction and transport 69 (1992) 61

New applications of crown ethers. 12. "Double-cycle" transport mechanism for crown ether/2,6-di(*t*-butyl)-4-nitrophenol/alkylammonium salt system. Effect of reversed-micelle like aggregate of alkylammonium salts on cation transport through a liquid membrane 69 (1992) 75

Specific membrane transport of copper(II) ion by a cooperative carrier composed of 1,7-diaza-15-crown-5 and palmitic acid 75 (1992) 61

Crystallinity
Vapor and gas permeability of polyurethane membranes. Part II. Effect of functional group 56 (1991) 279

Crystallization kinetics
Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Microporous membrane formation via thermally-induced phase separation. VI. Effect of diluent morphology and relative crystallization kinetics on polypropylene membrane structure 64 (1991) 55

Crystallosolvate
Poly(methyl methacrylate)/(DMF/metal salt) complex membrane for gas separation 74 (1992) 71

Cuprophan
Water state of Cuprophan (hemodialysis membrane) 74 (1992) 19

Cuprophan membrane
Analysis of some cases of pseudo-azeotropes in pervaporation 55 (1991) 1

Curing agent
Water and oxygen transport as performance parameters of paint films 52 (1990) 393

Current discharge
Cation-exchange reaction with accompanying current discharge 70 (1992) 267

Current–noise power spectra
Ion transfer across electrodialysis membranes in the overlimiting current range: stationary voltage current characteristics and current noise power spectra under different conditions of free convection 71 (1992) 105

Curriculum
Teaching the engineering aspects of membrane process technology 62 (1991) 239

D

Daramic
Modification of Daramic, microporous separator, for redox flow battery applications 75 (1992) 81

Decomposition, chemical
Porogen derived membranes. 1. Concept description and analysis 54 (1990) 271

Dehydration
Methods to improve flux during alcohol/water azeotrope separation by vapor permeation 68 (1992) 229

Dehydrogenation
Basic experimental study on palladium membrane reactors 66 (1992) 149

Demulsification
Concentration of amino acids by a liquid emulsion membrane with a cationic extractant 70 (1992) 225

Deposited layer formation
The kinetics of the formation of a deposited layer during the reverse osmosis of skim milk 54 (1990) 13

Effects of salt ions and deposit formation on the permeation of organic molecules in complex media in reverse osmosis 54 (1990) 339

Desalination
Ion exchange membranes with preferential permselectivity for monovalent ions 54 (1990) 233

Dextran
Dextran transport through asymmetric ultrafiltration membranes: Comparison with hydrodynamic models 68 (1992) 21

Di(2-ethylhexyl)dithiophosphoric acid carrier
Membrane extraction of silver by di(2-ethylhexyl)dithiophosphoric acid 70 (1992) 31

Transport of metals through gelled supported liquid membranes containing carrier 71 (1992) 41

Di(2-ethylhexyl)phosphoric acid carrier
Extraction of amino acids by emulsion liquid membranes

containing di(2-ethylhexyl)phosphoric acid as a carrier 58 (1991) 11

Diafiltration
Using multistage techniques to improve diafiltration fractionation efficiency 72 (1992) 1

Dialysis
Estimation of equilibrium compositions in dialysis of aqueous solutions of metal sulfates, $MeSO_4$, on cation-exchange membranes 60 (1991) 157

Characterization of hollow fiber hemodialysis membranes: pore size distribution and performance 73 (1992) 143

Dialysis, including donnan
Permselectivity of ionic solutes across charged dialysis membranes: *In vitro* and *in vivo* diffusive mass transfer 52 (1990) 191

A diffusion model of Donnan dialysis under flow conditions 53 (1990) 45

The determination of diffusion coefficients of counter-ions in the ion-exchange membrane by means of batchwise Donnan dialytic experiments 53 (1990) 215

Salt and base separation with interpolymer type carboxylic ion-exchange membrane 65 (1992) 141

Dialysis (Pozniak, Donnan)
Competitive diffusion of hydrochloric acid and sodium chloride through an acid dialysis membrane 55 (1991) 79

Dielectric constant
Competitive, proton-coupled, alkali metal cation transport across polymer-supported liquid membranes containing sym-(decyl)-dibenzo-16-crown-5-oxyacetic acid: Variation of the alkyl 2-nitrophenyl ether membrane solvent 56 (1991) 195

Dielectric exclusion
The energy of an ion in a cylindrical pore of a low dielectric membrane 52 (1990) 89

Dielectric relaxation
Dielectric theory of concentration polarization. Relaxation of capacitance and conductance for electrolyte solutions with locally varying conductivity 64 (1991) 153

Dielectric analysis of concentration polarization phenomena at cation-exchange membrane/solution interfaces by frequency variation and d.c. bias application 64 (1991) 163

Diethylamino groups
Water/acetone permeability of porous hollow-fiber membrane containing diethylamino groups on the grafted polymer branches 71 (1992) 1

Differential refractometry
Refractometric measurement of polarized layer structure: studies of hyaluronic acid ultrafiltration 68 (1992) 249

Differential scanning calorimetry
Polyethersulfone and polyphenylsulfone hollow fiber trilayer membranes spun from Lewis acid:base complexes – Structure determination by SEM, DSC, and oxygen plasma ablation 54 (1990) 29

Behavior of water in perfluorinated ionomer membranes containing various monovalent cations 68 (1992) 1

Diffusion
Transport characterization of a polypyrrolone for gas separations 55 (1991) 99

Transport of amino acids and their phosphonic acid analogues through supported liquid membranes containing macrocyclic carriers. Experimental parameters 56 (1991) 167

The permselectivity of polyorganosiloxanes containing ester functionalities 56 (1991) 217

Analysis of ion transport with fixed site carrier membranes 56 (1991) 229

Extraction of amino acids by emulsion liquid membranes containing di(2-ethylhexyl)phosphoric acid as a carrier 58 (1991) 11

Mass transfer in Nafion membrane systems: Effects of ionic size and charge on selectivity 58 (1991) 175

Dynamics of washing-out dialyzers with hollow-fiber membranes 58 (1991) 201

A diffusion-controlled model for wet-casting membrane formation 59 (1991) 169

The effects of aryl-halogenation on the gas permeabilities of poly(phenolphthalein terephthalate) and poly(bisphenol A phthalate) 59 (1991) 293

The relative contribution of adsorption to the overall sorption and transport of small molecules in amber 60 (1991) 147

Methanol–hydrogen separation by capillary condensation in inorganic membranes 60 (1991) 185

Facilitated transport mechanism in fixed site carrier membranes 60 (1991) 297

Current–voltage curves for ion-exchange membranes. Contributions to the total potential drop 61 (1991) 177

Experimental verification of the shear-induced hydrodynamic diffusion model of crossflow microfiltration 62 (1991) 249

Mass transfer dynamics of the evaporation step in mem-

brane formation by phase inversion 64 (1991) 81

Carrier-mediated transport of uranyl ions across tributyl phosphate–dodecane liquid membranes 64 (1991) 93

Membrane material effect on copper coupled transport through liquid membranes 64 (1991) 129

Molecular separation by thermosensitive hydrogel membranes 64 (1991) 283

Relationship between permselectivity and permeability in pervaporation of water/alcohol mixture 65 (1992) 51

Encapsulation by interfacial polycondensation. I. The capsule production and a model for wall growth 65 (1992) 59

Encapsulation by interfacial polycondensation. II. The membrane wall structure and the rate of the wall growth 65 (1992) 69

Effect of geometry on solvent front penetration in glassy polymers 65 (1992) 77

Salt and base separation with interpolymer type carboxylic ion-exchange membrane 65 (1992) 141

Diffusion of aniline through perfluorosulfonate ion exchange membrane 65 (1992) 205

Formation of asymmetric polysulfone membranes by immersion precipitation. Part I. Modelling mass transport during gelation 65 (1992) 213

Formation of asymmetric polysulfone membranes by immersion precipitation. Part II. The effects of casting solution and gelation bath compositions on membrane structure and skin formation 65 (1992) 231

Experimental and modeling studies of a parasitic binding mechanism in facilitated membrane transport 66 (1992) 55

A general expression for the total release of diffusant through heterogeneous membranes 66 (1992) 241

Gas transport and separation with ceramic membranes. Part I. Multilayer diffusion and capillary condensation 66 (1992) 259

Gas transport and separation with ceramic membranes. Part II. Synthesis and separation properties of microporous membranes 66 (1992) 271

Dependence of permeability through polyimide membranes on state of gas, vapor, liquid and supercritical fluid at high temperature 67 (1992) 29

Gas separation properties of spirobiindane polycarbonate 67 (1992) 75

Sorption and transport of CO_2 and CH_4 in chemically modified poly(phenylene oxide) 67 (1992) 191

Biased diffusion across ion-exchange membranes. Percolation theory approach 67 (1992) 273

Dextran transport through asymmetric ultrafiltration membranes: Comparison with hydrodynamic models 68 (1992) 21

Modelling macromolecular diffusion through a porous medium 68 (1992) 93

Determination of some transport coefficients for the skin and porous layer of a composite membrane 69 (1992) 29

Scintillation proximity assay for measuring benzene absorption in a polyethylene membrane 69 (1992) 179

Sorption and transport of ethanol and water in poly(ethylene-co-vinyl acetate) membranes 69 (1992) 223

Separation of hydrogen from silane via membranes: A step in the production of ultra-high-purity silicon 70 (1992) 143

A re-appraisal of modelling in a liquid surfactant membrane waste water cleanup process 70 (1992) 283

Improved analytical prediction of facilitation factors in facilitated transport 70 (1992) 289

Transport studies with porous alumina membranes 71 (1992) 247

Permeation rates of aqueous alcohol solutions in pervaporation through Nafion membranes 72 (1992) 31

The effects of glassy microstructure on small molecule transport in amorphous poly(ethylene terephthalate) 72 (1992) 119

Gas separation processes in membrane absorber 73 (1992) 73

Diffusional phenomena in membrane separation processes 73 (1992) 103

Modelling of the diffusion of carbon dioxide in polyimide matrices by computer simulation 73 (1992) 247

Neutralization dialysis for desalination 73 (1992) 305

How on eaerth, can I get chemical engineers to do their multi-component mass transfer sums properly? 73 (1992) 323

Penetrant-plasticized permeation in polymethylmethacrylate 74 (1992) 27

Electrokinetic transport of amino acids through a cation exchange membrane 75 (1992) 107

A new class of oxygen selective chemically driven nonpo-

rous ceramic membranes. Part I. A-site doped perovskites 75 (1992) 151

Diffusion coefficients
A new method for determining the diffusion coefficients of penetrants through polymeric membranes from steady state pervaporation experiments 68 (1992) 11

Diffusion coefficients, determination of
The determination of diffusion coefficients of counter-ions in the ion-exchange membrane by means of batchwise Donnan dialytic experiments 53 (1990) 215

Diffusion dialysis
Salt and base separation with interpolymer type carboxylic ion-exchange membrane 65 (1992) 141

Diffusion mechanism
The diffusion mechanism in silicone rubber 73 (1992) 55

Diffusive mass transfer
Permselectivity of ionic solutes across charged dialysis membranes: *In vitro* and *in vivo* diffusive mass transfer 52 (1990) 191

Diltiazem recovery
Pharmaceutical product recovery using a hollow fiber contained liquid membrane: A case study 75 (1992) 131

Dimethyl sulfoxide solution, aqueous
Concentration of aqueous dimethyl sulfoxide solutions through a chitosan membrane by permeation with a temperature difference 74 (1992) 183

Di-N-boc-diaminohexane
Porogen derived membranes. 1. Concept description and analysis 54 (1990) 271

Direct contact membranes
Selectivity and characteristics of direct contact membrane distillation type experiment. I. Permeability and selectivity through dried hydrophobic fine porous membranes 72 (1992) 53

Selectivity and characteristics of direct contact membrane distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

Displacement
Critical displacement pressure of a supported liquid membrane 75 (1992) 69

Dissociation
Osmotic pressure measurements of dissociating bovine hemoglobin 69 (1992) 213

Dissolved oxygen permeability
Unequivocal definition and determination of "dissolved gas" permeability and resistances of the liquid layers in contact lens applications 69 (1992) 43

Distillation
Selectivity and characteristics of direct contact membrane distillation type experiment. I. Permeability and selectivity through dried hydrophobic fine porous membranes 72 (1992) 53

Selectivity and characteristics of direct contact membrane distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

Distributed parameter model
Theoretical and experimental analysis of a hybrid bioartificial membrane pancreas: A distributed parameter model taking into account Starling fluxes 52 (1990) 351

Domain fixing
Charge mosaic composite membranes constructed by phase growth 54 (1990) 75

Donnan breakdown
Electrodialytic production of gas-free sodium hydroxide based on Donnan breakdown 57 (1991) 321

Donnan dialysis
The determination of diffusion coefficients of counter-ions in the ion-exchange membrane by means of batchwise Donnan dialytic experiments 53 (1990) 215

Downstream pressure
Pervaporation of aromatic C_8-isomers 57 (1991) 257

Drinking water
On the nitrate and monovalent cation selectivity of ion exchange membranes used in drinking water purification 75 (1992) 265

Drop size prediction
Drop size prediction in liquid membrane systems 60 (1991) 261

Drug delivery
Sorption and transport of ethanol and water in poly(ethylene-co-vinyl acetate) membranes 69 (1992) 223

Drug permeability
A kinetic model for ion transport across skin 71 (1992) 257

Dual-mode models
Approximate solutions for permeabilities of a binary gas mixture via conventional and modified dual-mode models 52 (1990) 221

Dual mode sorption model
Some fundamental approaches to membrane gas permeability and permselectivity 53 (1990) 229

Gas and vapor permeation and sorption in poly(trimethylsilylpropyne) 60 (1991) 13

Dual sorption model

Competitive diffusion of hydrochloric acid and sodium chloride through an acid dialysis membrane 55 (1991) 79

Solubility and permeability of quenched poly(2-,6-dimethyl phenyleneoxide) with various microvoids 60 (1991) 103

The sorption of water vapor by an amorphous polyamide 65 (1992) 187

Sorption and transport of CO_2 and CH_4 in chemically modified poly(phenylene oxide) 67 (1992) 191

Transport of a zwitter ion across a composite ion-exchange membrane involving the dual sorption mechanism 69 (1992) 51

Conformer isomerization kinetics in glassy amorphous poly(ethylene terephthalate) and their effect on penetrant sorption 72 (1992) 103

A quantitative representation of halothane solubility and mobility in brain tissue 72 (1992) 205

Penetrant-plasticized permeation in polymethylmethacrylate 74 (1992) 27

Generalized microscopic mechanism of facilitated transport in fixed site carrier membranes 75 (1992) 121

Dusty-gas model
A generalized model for the transport of gases in porous, non-porous, and leaky membranes. I. Application to single gases 75 (1992) 245

Dye removal
Development of new rod-type membranes for effluent decolorization: performance tests on model dye solutions 68 (1992) 307

Dynamically formed membranes
Formation of dynamic UF membrane with fine Zr particles 64 (1991) 273

Dynamic microfilter
Dynamic microfiltration of dilute slurries with a rotating ceramic membrane 62 (1991) 187

Dynamics
Measurement and analysis of bath-side interfacial concentration gradients during phase inversion 74 (1992) 83

E

Economics
An integrated electrodialysis–evaporation process for the treatment of aqueous process streams containing electrolytes 52 (1990) 43

Applicability conditions of idealized flow models for gas separation by asymmetric membrane 55 (1991) 333

Industrial application of vapour permeation 61 (1991) 113

A new evaluation of membrane processes for the oxygen-enrichment of air. I. Identification of optimum operating conditions and process configuration 62 (1991) 13

A new evaluation of membrane processes for the oxygen-enrichment of air. II. Effects of economic parameters and membrane properties 62 (1991) 37

Optimal channel spacer design for ultrafiltration 62 (1991) 275

Better hollow fiber contactors 62 (1991) 371

Edge effect
Unequivocal definition and determination of "dissolved gas" permeability and resistances of the liquid layers in contact lens applications 69 (1992) 43

EDTA
Separation of yttrium in a hollow fiber membrane 74 (1992) 215

Education
Teaching the engineering aspects of membrane process technology 62 (1991) 239

Effective diffusivity
Effective diffusivity in W/O emulsion 68 (1992) 169

Effective skin thickness
Surface fluorination of polysulfone asymmetric membranes and films 56 (1991) 77

Efficiency study
Comparative mechanical efficiency of several plant configurations using a pressure-retarded osmosis energy converter 51 (1990) 323

Electrical conductivity
Electrical conductivity of cationic poly(vinyl alcohol) membranes having quaternary ammonium groups 64 (1991) 247

Electrical parameters
Characterisation of ultrafiltration membranes by impedance spectroscopy. I. Determination of the separate electrical parameters and porosity of the skin and sublayers 66 (1992) 19

Electrocatalysis
Advances in the use of perfluorinated cation exchange

membranes in integrated water electrolysis and hydrogen/oxygen fuel cell systems 73 (1992) 87

Electrochemical properties
Electrochemical properties of asymmetric cellulose acetate membranes 52 (1990) 57

Electrochemical transport
Transport of water dissolved oxygen in polymers via electrochemical technique 70 (1992) 207

Electrochemistry
Transport properties of anion exchange membranes in contact with hydrochloric acid solutions. Membranes for acid recovery by electrodialysis 57 (1991) 57

Electrode responses to phenolic species through cellulosic membranes 57 (1991) 83

Scanning electrochemical microscopy of a porous membrane 58 (1991) 71

Electrodialysis water splitting technology 58 (1991) 117

Competition between the electrotransports of acetate and chloride ions through a polymeric anion exchange membrane 59 (1991) 265

Metal and metal oxides based membrane composites for solid polymer electrolyte water electrolysers 61 (1991) 157

Electrical impedance of composite membranes based on polyelectrolyte complexes 62 (1991) 145

Solvent transport across anion-exchange membranes under a temperature difference and an osmotic pressure difference 67 (1992) 83

Switchable gate membranes. Conducting polymer films for the selective transport of neutral solution species 70 (1992) 9

Solvent transport across cation-exchange membranes under a temperature difference and under an osmotic pressure difference 71 (1992) 151

Membrane potential of separation membranes as affected by ion adsorption 71 (1992) 189

A kinetic model for ion transport across skin 71 (1992) 257

Electroconvection
Ion transfer across electrodialysis membranes in the overlimiting current range: stationary voltage current characteristics and current noise power spectra under different conditions of free convection 71 (1992) 105

Electrodialysis
An integrated electrodialysis–evaporation process for the treatment of aqueous process streams containing electrolytes 52 (1990) 43

Electrotransport of carbonate and hydrogen carbonate ions in anion exchange membranes 54 (1990) 63

Transport properties of anion exchange membranes in contact with hydrochloric acid solutions. Membranes for acid recovery by electrodialysis 57 (1991) 57

Concentration polarization in ion exchange membrane electrodialysis 57 (1991) 217

Electrodialytic production of gas-free sodium hydroxide based on Donnan breakdown 57 (1991) 321

Characterization of ion exchange membrane surfaces by means of X-ray photoelectron spectroscopy and SEM 58 (1991) 49

Electrodialysis water splitting technology 58 (1991) 117

Current–voltage curves for ion-exchange membranes. Contributions to the total potential drop 61 (1991) 177

Bipolar membranes for purification of acids and bases 61 (1991) 239

Dielectric theory of concentration polarization. Relaxation of capacitance and conductance for electrolyte solutions with locally varying conductivity 64 (1991) 153

Dielectric analysis of concentration polarization phenomena at cation-exchange membrane/solution interfaces by frequency variation and d.c. bias application 64 (1991) 163

Transport number of an ion across an amphoteric ion-exchange membrane in $CaCl_2$–NaCl system 66 (1992) 235

Recovery by electrodialysis of cyanide electroplating rinse waters 68 (1992) 283

Electrotransport of alanine through ion-exchange membranes 69 (1992) 273

Transport competition between proton and cupric ion through a cation-exchange membrane. I. Equilibrium properties of the system: membrane–$CuSO_4 + H_2SO_4$ solution 71 (1992) 181

Ion transfer across electrodialysis membranes in the overlimiting current range: chronopotentiometric studies 72 (1992) 171

On the nitrate and monovalent cation selectivity of ion exchange membranes used in drinking water purification 75 (1992) 265

Electrodiffusion
Investigation of ultrafiltration kinetics 58 (1991) 147

A kinetic model for ion transport across skin 71 (1992) 257

Electrodynamic theory

The energy of an ion in a cylindrical pore of a low dielectric membrane 52 (1990) 89

Electrohydrodynamic convection
Control of gas permeation via electrohydrodynamic convection in a liquid crystal membrane 74 (1992) 223

Electrokinetic transport
Electrokinetic transport of amino acids through a cation exchange membrane 75 (1992) 107

Electrolyte absorption
Ionic equilibria in ion-exchange membranes: a comparison of pore model predictions with experimental results 67 (1992) 211

Electrolyte transport
Interpretation of transport coefficients in Nafion using a parallel pore model 67 (1992) 227

Electrolyzer
Advances in the use of perfluorinated cation exchange membranes in integrated water electrolysis and hydrogen/oxygen fuel cell systems 73 (1992) 87

Electron microscopy
The fine-structure of ultrafiltration membranes. I. Clean membranes 62 (1991) 75

The fine-structure of ultrafiltration membranes. II. Protein fouled membranes 62 (1991) 87

Fouling mechanisms of membranes during protein ultrafiltration 68 (1992) 79

Characterization of microfiltration membranes by image analysis of electron micrographs. Part I. Method development 71 (1992) 221

Characterization of microfiltration membranes by image analysis of electron micrographs. Part II. Functional and morphological parameters 71 (1992) 233

Electron transfer
Photo-stimulated coupled transport of electrons and protons across quinone-doped liquid polymer-supported biomimetic membrane 59 (1991) 1

Electroosmosis
Relaxation of polymer chains dissolved in the liquid phase of membranes. I. Electroosmosis with oxidized collodion and collodion–poly(acrylic acid) membranes 58 (1991) 59

Permeation studies on supported lecithin liquid membranes 59 (1991) 27

Electro-kinetic transport coefficients of aqueous binary mixtures through titanium oxide porous plug 70 (1992) 1

Electrophoresis
Electrophoretic elution and adsorption: Investigations using microporous membrane immunoadsorbents 56 (1991) 247

Scanning electrochemical microscopy of a porous membrane 58 (1991) 71

Electrophoretic elution
Electrophoretic elution and adsorption: Investigations using microporous membrane immunoadsorbents 56 (1991) 247

Electroplating
Recovery by electrodialysis of cyanide electroplating rinse waters 68 (1992) 283

Electrostatic potential
Novel membrane separation method using liquid and porous polymeric membranes 69 (1992) 131

Electrotransport
Electrotransport of alanine through ion-exchange membranes 69 (1992) 273

Emf
Preparation of redox cell properties of cation exchange membrane combined anisotropically with polypyrrole 66 (1992) 289

Emf measurements
Membrane transference numbers from a new emf method 74 (1992) 1

Emulsion
Effect of new surfactants on zinc extraction with liquid surfactant membranes 57 (1991) 161

Emulsion breakup
Selective separation of organic solutes by aqueous liquid surfactant membranes 59 (1991) 189

Emulsion liquid membranes
Multisolute extraction of organic acids by liquid membranes. I. Batch experiments and models 53 (1990) 71

Multisolute extraction of organic acids by emulsion liquid membranes. II. Continuous flow experiments and models 53 (1990) 105

Facilitated emulsion liquid membrane separation of complex hydrocarbon mixtures 56 (1991) 239

Extraction of amino acids by emulsion liquid membranes containing di(2-ethylhexyl)phosphoric acid as a carrier 58 (1991) 11

Study of the swelling phenomena of liquid surfactant membranes 59 (1991) 183

Selective separation of organic solutes by aqueous liquid surfactant membranes 59 (1991) 189

Numerical simulation for liquid membrane permeation of metal ions in a continuous countercurrent column 66 (1992) 27

Effective diffusivity in W/O emulsion 68 (1992) 169

Concentration of amino acids by a liquid emulsion membrane with a cationic extractant 70 (1992) 225

Emulsion membrane filtration
Application of crossflow microfiltration to emulsion separation in extraction processes 72 (1992) 245

Emulsion stability
Kinetic study of the emulsion breakage during metals extraction by liquid surfactant membranes (LSM) from simulated and industrial effluents 70 (1992) 65

Sorbitan monooleate (Span 80) decomposition during membrane ageing. A kinetic study 74 (1992) 9

Entrance length
Calculation of the entrance length of the concentration boundary layer in ultrafiltration and its influence on scale-up 74 (1992) 37

Environment sensitive membranes
Transport of monocharged ions through environment-sensitive composite membranes based on polyelectrolyte complexes 62 (1991) 117

Environment-sensitive properties of polymethacrylic acid-grafted polyethylene membranes 66 (1992) 69

Enzymatic hydrolysis
Hydrolysis of triolein by lipase in a hollow fiber reactor 74 (1992) 207

Enzymatic synthesis
Aqueous–organic membrane bioreactors. Part I. A guide to membrane selection 71 (1992) 139

Enzyme electrode
Effect of enzyme concentration on the dynamic behavior of a membrane-bound enzyme system 70 (1992) 237

Enzyme membranes
Diffusion-reaction of urea through multimembrane containing urease – Effects of microenvironments around urease and asymmetry of the membrane 54 (1990) 145

Error bounds
Coupling-constant description of coupled flow and diffusion 74 (1992) 253

Erythrocyte model
Unsteady facilitated transport of oxygen in hemoglobin-containing membranes and red cells 56 (1991) 341

ESCA
Surface studies on the ultrathin membrane prepared by spreading the polymer solution on a water surface 69 (1992) 121

Characterization of plasma-treated poly(hydroxybutyrate) membrane surfaces by ESCA and contact angle measurements 73 (1992) 163

Surface characterization of ethylene–vinyl alcohol copolymer membranes prepared under various conditions 75 (1992) 163

Ester hydrolsysis
Functional capsule membranes. Part 32. Lipase-immobilized capsule membranes as a reactor in ester syntheses and hydrolyses in organic solvents 59 (1991) 101

Ester synthesis
Functional capsule membranes. Part 32. Lipase-immobilized capsule membranes as a reactor in ester syntheses and hydrolyses in organic solvents 59 (1991) 101

Ethanol
Ethanol removal from fermentation broth by gas membrane extraction 70 (1992) 119

Ethanol fermentation
Continuous membrane fermentor separator for ethanol fermentation 57 (1991) 21

Ethanol sorption
Sorption and transport of ethanol and water in poly(ethylene-co-vinyl acetate) membranes 69 (1992) 223

Ethylene propylene rubber
Removal of trace organics from aqueous solutions. Effect of membrane thickness 61 (1991) 99

Ethylene–vinyl alcohol copolymer
Surface characterization of ethylene–vinyl alcohol copolymer membranes prepared under various conditions 75 (1992) 163

Ethylene–vinyl alcohol copolymer membranes
Effect of nonsolvents on the mechanism of wet-casting membrane formation from EVAL copolymers 59 (1991) 15

Ethylene vinyl alcohol membranes
A two step mechanism of diffusion-controlled ethylene vinyl alcohol membrane formation 57 (1991) 69

Evapomeation
Concentration of aqueous dimethyl sulfoxide solutions through a chitosan membrane by permeation with a temperature difference 74 (1992) 183

Plasma deposition of vinyl acetate onto Nylon-4 membrane for pervaporation and evapomeation separation of aqueous alcohol mixtures 75 (1992) 171

Evaporation

An integrated electrodialysis–evaporation process for the treatment of aqueous process streams containing electrolytes 52 (1990) 43

Extraction
Facilitated emulsion liquid membrane separation of complex hydrocarbon mixtures 56 (1991) 239

Ethanol removal from fermentation broth by gas membrane extraction 70 (1992) 119

Application of crossflow microfiltration to emulsion separation in extraction processes 72 (1992) 245

Extraction, multisolute
Multisolute extraction of organic acids by liquid membranes. I. Batch experiments and models 53 (1990) 71

Multisolute extraction of organic acids by emulsion liquid membranes. II. Continuous flow experiments and models 53 (1990) 105

Extraction of organic acids
Multisolute extraction of organic acids by liquid membranes. I. Batch experiments and models 53 (1990) 71

Multisolute extraction of organic acids by emulsion liquid membranes. II. Continuous flow experiments and models 53 (1990) 105

F

Facilitated ion transport
Facilitated ion transport through thin bilayers 54 (1990) 259

Facilitated transport
Application of supported liquid membranes for removal of nitrate, technetium (VII) and chromium (VI) from groundwater 55 (1991) 39

Stability of supported liquid membranes containing long-chain aliphatic amines as carriers 55 (1991) 65

Synthesis and properties of noncyclic polyether compounds. XVIII. A noncyclic polyether carrier exhibiting magnesium ion-selective transport 56 (1991) 153

Transport of amino acids and their phosphonic acid analogues through supported liquid membranes containing macrocyclic carriers. Experimental parameters 56 (1991) 167

Competitive, proton-coupled, alkali metal cation transport across polymer-supported liquid membranes containing sym-(decyl)-dibenzo-16-crown-5-oxyacetic acid: Variation of the alkyl 2-nitrophenyl ether membrane solvent 56 (1991) 195

Analysis of ion transport with fixed site carrier membranes 56 (1991) 229

Facilitated emulsion liquid membrane separation of complex hydrocarbon mixtures 56 (1991) 239

Unsteady facilitated transport of oxygen in hemoglobin-containing membranes and red cells 56 (1991) 341

Effect of new surfactants on zinc extraction with liquid surfactant membranes 57 (1991) 161

Molecular sieving effect of the zeolite-filled silicone rubber membranes in gas permeation 57 (1991) 289

Scanning electrochemical microscopy of a porous membrane 58 (1991) 71

Selective separation of organic solutes by aqueous liquid surfactant membranes 59 (1991) 189

Facilitated transport mechanism in fixed site carrier membranes 60 (1991) 297

Carrier-mediated transport of uranyl ions across tributyl phosphate–dodecane liquid membranes 64 (1991) 93

Membrane material effect on copper coupled transport through liquid membranes 64 (1991) 129

Molten salt facilitated transport membranes. Part 1. Separation of oxygen from air at high temperatures 65 (1992) 21

Molten salt facilitated transport membranes. Part 2. Separation of ammonia from nitrogen and hydrogen at high temperatures 65 (1992) 31

An analytical solution for competitive facilitated membrane transport 65 (1992) 39

Experimental and modeling studies of a parasitic binding mechanism in facilitated membrane transport 66 (1992) 55

Nitrate removal using supported liquid membranes: transport mechanism 67 (1992) 107

Effective diffusivity in W/O emulsion 68 (1992) 169

A computational and experimental study of unsteady facilitated transport 69 (1992) 99

A re-appraisal of modelling in a liquid surfactant mem-

brane waste water cleanup process 70 (1992) 283

Improved analytical prediction of facilitation factors in facilitated transport 70 (1992) 289

Gas separation processes in membrane absorber 73 (1992) 73

Control of gas permeation via electrohydrodynamic convection in a liquid crystal membrane 74 (1992) 223

Generalized microscopic mechanism of facilitated transport in fixed site carrier membranes 75 (1992) 121

Effects of protonation on the transport of hydrophobic nitrogen heterocycles through perfluorosulfonate ionomer membranes 75 (1992) 293

Facilitation
Mechanisms of facilitation and blocking in gramicidin channels by impermeant ions 66 (1992) 157

Feed-complexing agent
The separation of *meta*- and *para*-xylene by pervaporation in the presence of CBr_4, a selective feed-complexing agent 67 (1992) 67

Feed temperature
Pervaporation of aromatic C_8-isomers 57 (1991) 257

Fermentation
Ethanol removal from fermentation broth by gas membrane extraction 70 (1992) 119

Fiber membranes
Preparation of a sol–gel derived thin membrane on a porous ceramic hollow fiber by the filtration technique 59 (1991) 73

Preparation of hollow fiber membranes from polyetherimide for gas separation 65 (1992) 295

Behavioral analysis of air perstripping 67 (1992) 1

Use of sealed end hollow fibers for bubbleless membrane aeration: experimental studies 69 (1992) 1

The use of independently sealed microporous hollow fiber membranes for oxygenation of water: model development 69 (1992) 11

Preparation of asymmetric gas separation membranes with high selectivity by a dual-bath coagulation method 70 (1992) 17

Simulation of the structure of polymer membranes: pore properties and preliminary results for particulate blinding 70 (1992) 85

Separation of hydrogen from silane via membranes: A step in the production of ultra-high-purity silicon 70 (1992) 143

Hollow fiber air drying 72 (1992) 231

Separation of propylene and propane by polyimide hollow-fiber membrane module 73 (1992) 37

Hydrolysis of triolein by lipase in a hollow fiber reactor 74 (1992) 207

Separation of yttrium in a hollow fiber membrane 74 (1992) 215

Removal of *p*-nitrophenol from aqueous solution by membrane-supported solvent extraction 75 (1992) 277

Fibre–matrix hypothesis
Ultrafiltration properties of hydrogel analogues of basement membrane: A comparison of the pore theory and the fibre–matrix hypothesis 51 (1990) 141

Ultrafiltration through hydrogels: Effects of hydration and crosslinking 52 (1990) 1

Field emission scanning electron microscopy
Quantitative microscopic study of surface characteristics of ultrafiltration membranes 54 (1990) 89

Filler content
Preparation conditions affecting the permeability of polyethylene microfiltration membranes 52 (1990) 109

Film theory
Mass transfer in ultrafiltration 61 (1991) 49

Filtration
Incorporation of the cake pressure profiles in the calculation of the effect of particle charge on the permeability of filter cakes obtained in the filtration of colloids and particulates 72 (1992) 197

Filtration technique
Preparation of a sol–gel derived thin membrane on a porous ceramic hollow fiber by the filtration technique 59 (1991) 73

Fine porous membranes
Selectivity and characteristics of direct contact membrane distillation type experiment. I. Permeability and selectivity through dried hydrophobic fine porous membranes 72 (1992) 53

Selectivity and characteristics of direct contact membrane distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

Fine Zr particles
Formation of dynamic UF membrane with fine Zr particles 64 (1991) 273

Fixed charge density
Electrochemical properties of asymmetric cellulose acetate membranes 52 (1990) 57

Theory study of the effect of ion adsorption on membrane potential and its application to collodion membranes 53 (1990) 19

Fixed-site carrier membranes
Analysis of ion transport with fixed site carrier membranes 56 (1991) 229

Facilitated transport mechanism in fixed site carrier membranes 60 (1991) 297

Generalized microscopic mechanism of facilitated transport in fixed site carrier membranes 75 (1992) 121

Flakes
Membranes containing selective flakes 52 (1990) 275

Flat-leaf cell
Reverse osmosis treatment of multicomponent electrolyte solutions 72 (1992) 211

Flexible-chain macromolecules, ultrafiltration of
Globular proteins and flexible-chain macromolecules. Ultrafiltration behaviour 62 (1991) 1

Flocculation
Improvement of crossflow microfiltration performances with flocculation 68 (1992) 241

Flue gas desulfurization
Liquid membranes for flue gas desulfurization 51 (1990) 105

Fluorination
Surface fluorination of composite membranes. Part 1. Transport properties 55 (1991) 131

Surface fluorination of composite membranes. Part II. Characterization of the fluorinated layer 55 (1991) 149

Surface fluorination of polysulfone asymmetric membranes and films 56 (1991) 77

Fluorocarbon films
Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

Flux decline
Experimental verification of the shear-induced hydrodynamic diffusion model of crossflow microfiltration 62 (1991) 249

Flux ratio
A diffusion-controlled model for wet-casting membrane formation 59 (1991) 169

Formation of asymmetric polysulfone membranes by immersion precipitation. Part II. The effects of casting solution and gelation bath compositions on membrane structure and skin formation 65 (1992) 231

Flux resistance
Protein fouling of UF membranes: Causes and consequences 52 (1990) 121

Food industry
Effects of salt ions and deposit formation on the permeation of organic molecules in complex media in reverse osmosis 54 (1990) 339

Evaluation of process models for fouling control of reverse osmosis of cheese whey 58 (1991) 89

Food technology
Collagen film as a new pervaporation membrane 61 (1991) 269

Force balance model
Prediction of steady state crossflow filtration using a force balance model 68 (1992) 205

Formaldehyde production
Formaldehyde production from methanol using a porous Vycor glass membrane reactor 57 (1991) 95

Fouling
Fouling of inorganic membranes during whey ultrafiltration: Analytical methodology 51 (1990) 293

Protein fouling of UF membranes: Causes and consequences 52 (1990) 121

Fouling in tangential-flow ultrafiltration: The effect of colloid size and coagulation pretreatment 52 (1990) 173

Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

A contribution to the translation of retention curves into pore size distribution for sieving membranes 54 (1990) 321

Protein adsorption and fouling in ceramic ultrafiltration membranes 55 (1991) 21

Effects of protein fouling on the apparent pore size distribution of sieving membranes 56 (1991) 13

Evaluation of process models for fouling control of reverse osmosis of cheese whey 58 (1991) 89

Concentration polarisation build-up in hollow fibers: a method of measurement and its modelling in ultrafiltration 59 (1991) 81

Modification of polysulfone ultrafiltration membranes with UV irradiation and hydrophilicity increasing agents 60 (1991) 275

The fine-structure of ultrafiltration membranes. II. Protein fouled membranes 62 (1991) 87

A comprehensive model for cross-flow filtration incorpo-

rating polydispersity of the influent 65 (1992) 173

Dynamic optimization of a one-stage reverse-osmosis installation with respect to membrane fouling 65 (1992) 277

Non-linear flow through compressible membranes and its relation to osmotic pressure 66 (1992) 37

Laboratory-scale investigations into the use of extremely thermophilic proteinases for cleaning ultrafiltration membranes fouled during whey processing 67 (1992) 93

Deviations in the fouling resistance of UF membranes due to clean membrane permeability variations 67 (1992) 177

The use of anionic surfactants for reducing fouling of ultrafiltration membranes: their effects and optimization 67 (1992) 249

Fouling mechanisms of membranes during protein ultrafiltration 68 (1992) 79

Improvement of crossflow microfiltration performances with flocculation 68 (1992) 241

Effects of pH and solvent density on dead-end upward ultrafiltration 69 (1992) 87

Transport and separation of proteins by ultrafiltration through sorptive snd non-sorptive membranes 69 (1992) 189

Membrane reactor with double mass transfer: membrane requirements, fouling analysis and flux prediction during ultrafiltration of cell culture medium 69 (1992) 259

Prediction of limiting flux in ultrafiltration of kraft black liquor 72 (1992) 137

Application of crossflow microfiltration to emulsion separation in extraction processes 72 (1992) 245

Contact angles of ultrafiltration membranes and their possible correlation to membrane performance 72 (1992) 293

Criteria for fouling layer disengagement during filtration of feeds containing a wide range of solutes 73 (1992) 181

Ultrafiltration of bentonite suspensions with hollow fiber membranes 74 (1992) 51

Determination of osmotic pressure and fouling resistances and their effects on performance of ultrafiltration membranes 74 (1992) 141

Fouling layer disengagement
Criteria for fouling layer disengagement during filtration of feeds containing a wide range of solutes 73 (1992) 181

Fouling layer permeability
Incorporation of the cake pressure profiles in the calculation of the effect of particle charge on the permeability of filter cakes obtained in the filtration of colloids and particulates 72 (1992) 197

Free volume
Studies in gas permeability and membrane gas separation in the Soviet Union 64 (1991) 191

A new method for determining the diffusion coefficients of penetrants through polymeric membranes from steady state pervaporation experiments 68 (1992) 11

Permeation of oxygen, argon and nitrogen through polymer membranes 71 (1992) 13

Structure and gas permeability of silylated polyphenylene oxide 71 (1992) 97

Permeation rates of aqueous alcohol solutions in pervaporation through Nafion membranes 72 (1992) 31

Free volume treatment
Some fundamental approaches to membrane gas permeability and permselectivity 53 (1990) 229

Fuel cells
Advances in the use of perfluorinated cation exchange membranes in integrated water electrolysis and hydrogen/oxygen fuel cell systems 73 (1992) 87

Functional groups
Vapor and gas permeability of polyurethane membranes. Part II. Effect of functional group 56 (1991) 279

Functionalization
Synthesis of reactive composite membranes from Celgard 2400 and methacrylate monomers 67 (1992) 289

Fusaric acid
Transport of a zwitter ion across a composite ion-exchange membrane involving the dual sorption mechanism 69 (1992) 51

Fusion fuel
Counter-current recycle membrane cascades for the separation of the boron isotopes in BF_3 54 (1990) 307

G

Gas and vapor permeation

Gas and vapour transport through microporous membranes. I. Knudsen–Poiseuille transition 53 (1990) 159

Gas and vapour transport through microporous membranes. II. Membrane distillation 53 (1990) 173

Permeation of chloromethanes in copolymers of chloroprene with methyl methacrylate and methacrylic acid 55 (1991) 239

The permselectivity of polyorganosiloxanes containing ester functionalities 56 (1991) 217

Vapor and gas permeability of polyurethane membranes. Part II. Effect of functional group 56 (1991) 279

The resistance towards gas transport of the sublayer of asymmetric PPO hollow fiber membranes determined by plasma-etching 57 (1991) 307

A new transport model for pervaporation 59 (1991) 133

A study on the pervaporation of ethanol/water mixtures on the basis of pore flow model 59 (1991) 151

The effects of aryl-halogenation on the gas permeabilities of poly(phenolphthalein terephthalate) and poly(bisphenol A phthalate) 59 (1991) 293

Gas and vapor permeation and sorption in poly(trimethylsilylpropyne) 60 (1991) 13

Solubility and permeability of quenched poly(2-,6-dimethyl phenyleneoxide) with various microvoids 60 (1991) 103

The relative contribution of adsorption to the overall sorption and transport of small molecules in amber 60 (1991) 147

Methanol–hydrogen separation by capillary condensation in inorganic membranes 60 (1991) 185

Facilitated transport mechanism in fixed site carrier membranes 60 (1991) 297

The formation of asymmetric hollow fibre membranes for gas separation, using PPE of different intrinsic viscosities 64 (1991) 121

Interactions of polyether–polyurethanes with water vapour and water–methane separation selectivity 64 (1991) 229

Electrochemical synthesis of ultrathin film composite membranes 65 (1992) 113

A statistical mechanics approach to the separation of methane and nitrogen using capillary condensation in a microporous membrane 65 (1992) 163

The sorption of water vapor by an amorphous polyamide 65 (1992) 187

A nonideal model for analysis of gas separation permeators 65 (1992) 247

Gas separation by silicon based inorganic membrane at high temperature 66 (1992) 119

Gas separation properties of a new polymer/inorganic composite membrane 66 (1992) 129

Gas transport and separation with ceramic membranes. Part I. Multilayer diffusion and capillary condensation 66 (1992) 259

Gas transport and separation with ceramic membranes. Part II. Synthesis and separation properties of microporous membranes 66 (1992) 271

Dependence of permeability through polyimide membranes on state of gas, vapor, liquid and supercritical fluid at high temperature 67 (1992) 29

Gas separation properties of spirobiindane polycarbonate 67 (1992) 75

Sorption and transport of CO_2 and CH_4 in chemically modified poly(phenylene oxide) 67 (1992) 191

Vapor permeation and pervaporation separation of water–ethanol mixtures through polyimide membranes 68 (1992) 53

Direct heating of composite membranes in pervaporation and gas separation processes 68 (1992) 293

Sorption isotherms of alcohols in zeolite-filled silicone rubber and in PVA-composite membranes 70 (1992) 75

Permeation and plasticization behavior of glassy polymers: a WAXD interpretation 71 (1992) 117

Modelling of the diffusion of carbon dioxide in polyimide matrices by computer simulation 73 (1992) 247

Gas transport and sub-T_g relaxations in umodified and nitrated polyarylethersulfones 74 (1992) 193

Control of gas permeation via electrohydrodynamic convection in a liquid crystal membrane 74 (1992) 223

Preparation of composite membranes by a spin coating process 74 (1992) 233

Pervaporation of ethanol/water mixtures using novel hydrophobic membranes containing polydimethylsiloxane 75 (1992) 93

Gas chromatography, inverse

Gas and vapor permeation and sorption in poly(trimethylsilylpropyne) 60 (1991) 13

Gas diffusivity
Correlation of separation factor versus permeability for polymeric membranes 62 (1991) 165

Gas membranes
Ethanol removal from fermentation broth by gas membrane extraction 70 (1992) 119

Gas permeability
Aryl-nitration of poly(phenylene oxide) and polysulfone. Structural characterization and gas permeability 72 (1992) 91

Gas permeation
Determination of surface dense layer structure parameters of the asymmetric membrane by gas permeation method 52 (1990) 97

Development of rubbery materials with excellent barrier properties to H_2, D_2 and T_2 52 (1990) 263

Gas permeation behavior of phenolphthalein based heat-resistant polymers PEK-C and PES-C 53 (1990) 203

The permeation of gases through a poly(ethylene terephthalate) membrane deposited with SiO_2 59 (1991) 353

The effects of transition metal complexes on the permeation of small gas molecules through cellulose acetate membranes 60 (1991) 207

Relation between gas permselectivity and permeability in a bilayer composite membrane 71 (1992) 169

Characterization of membrane skin defects by gas permeation method 73 (1992) 47

A generalized model for the transport of gases in porous, non-porous, and leaky membranes. I. Application to single gases 75 (1992) 245

Gas permeators
Models and analyses of membrane gas permeators 73 (1992) 1

Gas permselectivity
Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. II. Effect of crosslinked state and annealing 75 (1992) 15

Gas separation membranes
On the effect of organo-silicon block copolymer–solvent–precipitant system composition on asymmetric membrane surface layer thickness 65 (1992) 1

Poly(methyl methacrylate)/(DMF/metal salt) complex membrane for gas separation 74 (1992) 71

Gas separations
Mathematical modelling of multicomponent membrane permeators 52 (1990) 205

Novel poly(silicon olefins) for gas separations 52 (1990) 289

Gas permeation behavior of phenolphthalein based heat-resistant polymers PEK-C and PES-C 53 (1990) 203

Some fundamental approaches to membrane gas permeability and permselectivity 53 (1990) 229

Transport characterization of a polypyrrolone for gas separations 55 (1991) 99

Surface fluorination of composite membranes. Part 1. Transport properties 55 (1991) 131

Surface fluorination of composite membranes. Part II. Characterization of the fluorinated layer 55 (1991) 149

Preparation and characterization of modified tubular ceramic membranes for use as catalyst supports 55 (1991) 199

Permeation of chloromethanes in copolymers of chloroprene with methyl methacrylate and methacrylic acid 55 (1991) 239

Gas separation membranes containing carbon immobilized by photochemical grafting onto polymers 55 (1991) 273

Separation of gas mixtures in unsteady-state conditions 55 (1991) 283

Investigation of efficiency of gas separation on nuclear track membranes with ultra-small pores 55 (1991) 311

Membranes for gas separation based on silylated polyphenylate oxide 55 (1991) 325

Applicability conditions of idealized flow models for gas separation by asymmetric membrane 55 (1991) 333

Membrane technology of mixed-gas separation: thermodynamic analysis for feasibility study 55 (1991) 349

Surface fluorination of polysulfone asymmetric membranes and films 56 (1991) 77

The permselectivity of polyorganosiloxanes containing ester functionalities 56 (1991) 217

Vapor and gas permeability of polyurethane membranes. Part II. Effect of functional group 56 (1991) 279

Separation of hydrogen through palladium thin film supported on a porous glass tube 56 (1991) 303

Hydrogen permeable palladium–silver alloy membrane supported on porous ceramics 56 (1991) 315

Improvement of oxygen permselectivity through polydimethylsiloxane and poly(1-trimethylsilylpropyne) films by the addition of a small amount of poly(trifluoromethyl substituted arylacetylene) 57 (1991) 207

A method for the determination of the pore size distribu-

tion of molecular sieve materials and its application to the characterization of partially pyrolyzed polysilastyrene/porous glass composite membranes 57 (1991) 237

Molecular sieving effect of the zeolite-filled silicone rubber membranes in gas permeation 57 (1991) 289

The resistance towards gas transport of the sublayer of asymmetric PPO hollow fiber membranes determined by plasma-etching 57 (1991) 307

Specifics of highly selective ammonia transport through gas-separating membranes based on perfluorinated copolymer in the form of hollow fibers 59 (1991) 117

Surface diffusion of organic vapor mixtures through porous glass 59 (1991) 233

The effects of aryl-halogenation on the gas permeabilities of poly(phenolphthalein terephthalate) and poly(bisphenol A phthalate) 59 (1991) 293

Preparation and characterization of silicon based inorganic membrane for gas separation 59 (1991) 331

Methanol–hydrogen separation by capillary condensation in inorganic membranes 60 (1991) 185

The effects of transition metal complexes on the permeation of small gas molecules through cellulose acetate membranes 60 (1991) 207

Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. I. Effect of synthesis temperature and molecular structure variation 60 (1991) 233

Facilitated transport mechanism in fixed site carrier membranes 60 (1991) 297

Analysis of gas permeation through composite membranes 61 (1991) 1

A new evaluation of membrane processes for the oxygen-enrichment of air. I. Identification of optimum operating conditions and process configuration 62 (1991) 13

A new evaluation of membrane processes for the oxygen-enrichment of air. II. Effects of economic parameters and membrane properties 62 (1991) 37

Correlation of separation factor versus permeability for polymeric membranes 62 (1991) 165

Teaching the engineering aspects of membrane process technology 62 (1991) 239

A larger-scale study of gas separation by hollow-fiber-contained liquid membrane permeator 62 (1991) 293

The formation of asymmetric hollow fibre membranes for gas separation, using PPE of different intrinsic viscosities 64 (1991) 121

Wheatstone bridge model for the laminated polydimethylsiloxane/polyethersulfone membrane for gas separation 64 (1991) 263

Electrochemical synthesis of ultrathin film composite membranes 65 (1992) 113

A statistical mechanics approach to the separation of methane and nitrogen using capillary condensation in a microporous membrane 65 (1992) 163

A nonideal model for analysis of gas separation permeators 65 (1992) 247

Preparation of hollow fiber membranes from polyetherimide for gas separation 65 (1992) 295

Experimental and modeling studies of a parasitic binding mechanism in facilitated membrane transport 66 (1992) 55

Approximate solutions for gas permeators separating binary mixtures 66 (1992) 103

Gas separation by silicon based inorganic membrane at high temperature 66 (1992) 119

Gas separation properties of a new polymer/inorganic composite membrane 66 (1992) 129

Basic experimental study on palladium membrane reactors 66 (1992) 149

Gas transport and separation with ceramic membranes. Part I. Multilayer diffusion and capillary condensation 66 (1992) 259

Gas transport and separation with ceramic membranes. Part II. Synthesis and separation properties of microporous membranes 66 (1992) 271

The use of recycle permeator systems for gas mixture separation 67 (1992) 15

Gas separation properties of spirobiindane polycarbonate 67 (1992) 75

Sorption and transport of CO_2 and CH_4 in chemically modified poly(phenylene oxide) 67 (1992) 191

Ammonia permeabilities of perfluorosulfonic membranes in various ionic forms 68 (1992) 43

Preparation of asymmetric gas separation membranes with high selectivity by a dual-bath coagulation method 70 (1992) 17

Separation of hydrogen from silane via membranes: A step in the production of ultra-high-purity silicon 70 (1992) 143

Structure and gas permeability of silylated polyphenylene oxide 71 (1992) 97

Permeation and plasticization behavior of glassy polymers: a WAXD interpretation 71 (1992) 117

Relation between gas permselectivity and permeability in a bilayer composite membrane 71 (1992) 169

Hollow fiber air drying 72 (1992) 231

Separation of propylene and propane by polyimide hollow-fiber membrane module 73 (1992) 37

Gas separation processes in membrane absorber 73 (1992) 73

Selective removal of H_2S from sour gas with microporous membranes. Part I. Application in a gas–liquid system 73 (1992) 293

Penetrant-plasticized permeation in polymethylmethacrylate 74 (1992) 27

Preparation of composite membranes by a spin coating process 74 (1992) 233

Plasticization effects on the gas permeability and permselectivity of polymer membranes 75 (1992) 47

Generalized microscopic mechanism of facilitated transport in fixed site carrier membranes 75 (1992) 121

A new class of oxygen selective chemically driven nonporous ceramic membranes. Part I. A-site doped perovskites 75 (1992) 151

Adsorption, permeation, and diffusion of gases in microporous membranes. II. Permeation of gases in microporous glass membranes 75 (1992) 233

Gas sorption
Transport characterization of a polypyrrolone for gas separations 55 (1991) 99

Thermodynamic study of sorption of n-alkanes onto 5A zeolites immobilized in photosynthetic membranes 55 (1991) 263

Gas separation properties of spirobiindane polycarbonate 67 (1992) 75

Gel layer
Flux decline behaviour with low molecular weight solutes during ultrafiltration in an unstirred batch cell 72 (1992) 149

Unsteady-state flux behaviour in relation to the presence of a gel layer 73 (1992) 231

Gels
Transport of metals through gelled supported liquid membranes containing carrier 71 (1992) 41

Geometry effect
Effect of geometry on solvent front penetration in glassy polymers 65 (1992) 77

Glass membranes
Formaldehyde production from methanol using a porous Vycor glass membrane reactor 57 (1991) 95

Surface diffusion of organic vapor mixtures through porous glass 59 (1991) 233

Solubility and permeability of quenched poly(2-,6-dimethyl phenyleneoxide) with various microvoids 60 (1991) 103

Gas separation by silicon based inorganic membrane at high temperature 66 (1992) 119

Conformer isomerization kinetics in glassy amorphous poly(ethylene terephthalate) and their effect on penetrant sorption 72 (1992) 103

The effects of glassy microstructure on small molecule transport in amorphous poly(ethylene terephthalate) 72 (1992) 119

Glass transition temperatures
Water and oxygen transport as performance parameters of paint films 52 (1990) 393

Vapor and gas permeability of polyurethane membranes. Part II. Effect of functional group 56 (1991) 279

Glassy hydrogels
Zero order release from glassy hydrogels. II. Matrix effects 54 (1990) 205

Glassy polymer films
Micromolecular transport in oriented glassy polymer films studied by a variety of techniques 52 (1990) 325

Glassy polymers
Non-equilibrium microstructural and transport characteristics of glassy poly(ethylene terephthalate) 60 (1991) 41

Gas separation properties of spirobiindane polycarbonate 67 (1992) 75

Permeation and plasticization behavior of glassy polymers: a WAXD interpretation 71 (1992) 117

Glucose oxidase

Porous membrane of *Bombyx mori* silk fibroin: structure characterization, physical properties and application to glucose oxidase immobilization 59 (1991) 39

Glucose transport
Charge mosaic composite membranes constructed by phase growth 54 (1990) 75

Glyceryl methacrylate (co)polymers
Ultrafiltration through hydrogels: Effects of hydration and crosslinking 52 (1990) 1

Glycol
Electro-kinetic transport coefficients of aqueous binary mixtures through titanium oxide porous plug 70 (1992) 1

Goethite
Synthesis and characterization of unsupported ferric oxide ceramic membranes 70 (1992) 41

Gold sol method
Characterization of anisotropic UF-membranes: top layer thickness and pore structure 61 (1991) 73

Grafted membranes
Mass transfer in radiation-grafted pervaporation membranes 54 (1990) 131

Grafting, modification by
Modified polyethersulfone membranes 62 (1991) 201

Grafting, radiation induced
Metal collection using chelating hollow fiber membrane 58 (1991) 221

Graft polymerization radiation-induced
Water/acetone permeability of porous hollow-fiber membrane containing diethylamino groups on the grafted polymer branches 71 (1992) 1

Gramicidin A channels
Mechanisms of facilitation and blocking in gramicidin channels by impermeant ions 66 (1992) 157

Groundwater
Application of supported liquid membranes for removal of nitrate, technetium (VII) and chromium (VI) from groundwater 55 (1991) 39

Stability of supported liquid membranes containing long-chain aliphatic amines as carriers 55 (1991) 65

H

Halothane
A quantitative representation of halothane solubility and mobility in brain tissue 72 (1992) 205

Heat treatment
Selectivity and characteristics of direct contact membrane distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

Hemocompatibility
Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

Hemodialysis
Permselectivity of ionic solutes across charged dialysis membranes: *In vitro* and *in vivo* diffusive mass transfer 52 (1990) 191

Hemoglobin
Osmotic pressure measurements of dissociating bovine hemoglobin 69 (1992) 213

Hemoglobin containing membranes
Unsteady facilitated transport of oxygen in hemoglobin-containing membranes and red cells 56 (1991) 341

Heparin, immobilization of
Partially cationized cellulose for non-thrombogenic membrane in the presence of heparin and endothelial-cell-surface-heparansulfate (ES–HS) 61 (1991) 253

Heterogeneous membranes
A general expression for the total release of diffusant through heterogeneous membranes 66 (1992) 241

History
From pig bladders and cracked jars to polysulfones: an historical perspective on membrane transport 60 (1991) 125

Hollow-fiber-contained liquid membranes
A larger-scale study of gas separation by hollow-fiber-contained liquid membrane permeator 62 (1991) 293

Hollow fiber membranes
Ammonia removal from water using microporous hollow fibers 51 (1990) 127

Polyethersulfone and polyphenylsulfone hollow fiber trilayer membranes spun from Lewis acid:base complexes – Structure determination by SEM, DSC, and oxygen plasma ablation 54 (1990) 29

The effects of carbon dioxide conditioning on the permeation behavior of hollow fiber asymmetric membranes 54 (1990) 103

Separation of ternary salt/acid aqueous solutions using hollow fiber reverse osmosis 54 (1990) 175

Continuous membrane fermentor separator for ethanol fermentation 57 (1991) 21

The resistance towards gas transport of the sublayer of asymmetric PPO hollow fiber membranes determined by plasma-etching 57 (1991) 307

Dynamics of washing-out dialyzers with hollow-fiber membranes 58 (1991) 201

Metal collection using chelating hollow fiber membrane 58 (1991) 221

Concentration polarisation build-up in hollow fibers: a method of measurement and its modelling in ultrafiltration 59 (1991) 81

Specifics of highly selective ammonia transport through gas-separating membranes based on perfluorinated copolymer in the form of hollow fibers 59 (1991) 117

Enzymatic synthesis of n-butyl oleate in a hollow fiber membrane reactor 61 (1991) 315

Better hollow fiber contactors 62 (1991) 371

The formation of asymmetric hollow fibre membranes for gas separation, using PPE of different intrinsic viscosities 64 (1991) 121

Solvent-induced morphological change of microporous hollow fiber membranes 70 (1992) 217

Water/acetone permeability of porous hollow-fiber membrane containing diethylamino groups on the grafted polymer branches 71 (1992) 1

Development of asymmetric hollow fibers from polyimides for air separation 75 (1992) 181

Adsorption, permeation, and diffusion of gases in microporous membranes. I. Adsorption of gases on microporous glass membranes 75 (1992) 221

Adsorption, permeation, and diffusion of gases in microporous membranes. II. Permeation of gases in microporous glass membranes 75 (1992) 233

Hollow fiber modules
Effect of permeate to feed ratio on protein recovery in membrane plasma fractionation 60 (1991) 87

Hollow fiber air drying 72 (1992) 231

Hollow fibers

Studies in gas permeability and membrane gas separation in the Soviet Union 64 (1991) 191

Selectivity and characteristics of direct contact membrane distillation type experiment. I. Permeability and selectivity through dried hydrophobic fine porous membranes 72 (1992) 53

Pharmaceutical product recovery using a hollow fiber contained liquid membrane: A case study 75 (1992) 131

Homogeneity dependence
Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. II. Effect of crosslinked state and annealing 75 (1992) 15

Homogeneous membranes
The detection of asymmetry in homogeneous membranes: Demonstration on a carbon molecular sieve membrane 75 (1992) 213

Homografting
Preparation and properties of vinyl acetate-grafted Nylon 6 membrane by using homografting method 66 (1992) 169

Homogeneity dependence
Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. II. Effect of crosslinked state and annealing 75 (1992) 15

Hyaluronic acid
Refractometric measurement of polarized layer structure: studies of hyaluronic acid ultrafiltration 68 (1992) 249

Hybrid separation systems
Synergistic, membrane-based hybrid separation systems 62 (1991) 347

Hydraulic resistance
Fouling of inorganic membranes during whey ultrafiltration: Analytical methodology 51 (1990) 293

Hydrazide
Microporous poly(caprolactam) hollow fibers for therapeutic affinity adsorption 74 (1992) 115

Hydrocarbons
Novel polymeric membranes for separation of hydrocarbons 66 (1992) 1

Hydrodynamic flow
Flow through porous media. Part XIII. Hydrodynamic flow studies of aqueous solutions of methanol, sucrose, sodium bicarbonate and their mixtures through antimony oxide membranes 62 (1991) 211

Hydrodynamics
Hydrodynamic aspects of crossflow microfiltration. Analysis of particle deposition at the membrane surface 71 (1992) 29

Hydrodynamic stability
A stability model for the striping phenomenon in ultrafiltration 57 (1991) 43

Hydrodynamic theory
Dextran transport through asymmetric ultrafiltration membranes: Comparison with hydrodynamic models 68 (1992) 21

Effect of membrane structure and protein concentration on the osmotic reflection coefficient 72 (1992) 277

Hydrogels
Release kinetics of pendant substituted bioactive molecules from swellable hydrogels: role of chemical reaction and diffusive transport 51 (1990) 83

Ultrafiltration through hydrogels: Effects of hydration and crosslinking 52 (1990) 1

Zero order release from glassy hydrogels. II. Matrix effects 54 (1990) 205

Zero order release from swollen hydrogels 54 (1990) 221

Electrical impedance of composite membranes based on polyelectrolyte complexes 62 (1991) 145

Swelling properties of partially hydrolyzed polyacrylamide gels and gelatin gels in aqueous media 64 (1991) 113

Molecular separation by thermosensitive hydrogel membranes 64 (1991) 283

Effect of geometry on solvent front penetration in glassy polymers 65 (1992) 77

Water states in PE-poly(MA-co-DVB) interpolymer type carboxylic ion-exchange membranes 66 (1992) 89

Hydrogen bonding
Water sorption and ionic diffusion in short side chain perfluorosulfonate ionomer membranes 69 (1992) 155

Hydrogen permeability
Hydrogen permeable palladium–silver alloy membrane supported on porous ceramics 56 (1991) 315

Hydrolytic polymer
Synthesis and characterization of unsupported ferric oxide ceramic membranes 70 (1992) 41

Hydrolyzed coating
Plasma deposition of vinyl acetate onto Nylon-4 membrane for pervaporation and evapomeation separation of aqueous alcohol mixtures 75 (1992) 171

Hydrometallurgy
A new liquid membrane technology – Electrostatic pseudo liquid membrane 52 (1990) 77

Hydrophilic/hydrofobic polymer membranes
Mass transfer through polymer membranes due to a temperature gradient 54 (1990) 191

Hydrophilic membranes
Pervaporation process: membrane conditioning and experimental mass transfer analysis 74 (1992) 105

Hydrophobic membranes
Ethanol removal from fermentation broth by gas membrane extraction 70 (1992) 119

2-Hydroxy-3-(trimethylammoniumchloride)propyl-cellulose, partially substituted
Partially cationized cellulose for non-thrombogenic membrane in the presence of heparin and endothelial-cell-surface-heparansulfate (ES–HS) 61 (1991) 253

H_2S/CO_2 selectivity
Selective removal of H_2S from sour gas with microporous membranes. Part I. Application in a gas–liquid system 73 (1992) 293

I

Image analysis
Quantitative microscopic study of surface characteristics of ultrafiltration membranes 54 (1990) 89

Characterization of microfiltration membranes by image analysis of electron micrographs. Part I. Method development 71 (1992) 221

Characterization of microfiltration membranes by image analysis of electron micrographs. Part II. Functional and morphological parameters 71 (1992) 233

Immersion precipitation method
Asymmetric membrane formation via immersion precipitation method. I. Kinetic effect 60 (1991) 219

Immobilization
Structural and enzymatic characterizations of papain immobilized onto vinyl alcohol/vinyl butyral copolymer membrane 66 (1992) 247

Immobilized enzymes
Polymeric membranes and coupled enzymes in the design of biosensors 68 (1992) 217

Immobilized glucose oxidase

Effect of enzyme concentration on the dynamic behavior of a membrane-bound enzyme system 70 (1992) 237

Immobilized molten salt membranes
Molten salt facilitated transport membranes. Part 1. Separation of oxygen from air at high temperatures 65 (1992) 21

Molten salt facilitated transport membranes. Part 2. Separation of ammonia from nitrogen and hydrogen at high temperatures 65 (1992) 31

Immunoadsorption
Electrophoretic elution and adsorption: Investigations using microporous membrane immunoadsorbents 56 (1991) 247

Impedance spectroscopy
Characterisation of ultrafiltration membranes by impedance spectroscopy. I. Determination of the separate electrical parameters and porosity of the skin and sublayers 66 (1992) 19

Inorganic membranes
Fouling of inorganic membranes during whey ultrafiltration: Analytical methodology 51 (1990) 293

Protein adsorption and fouling in ceramic ultrafiltration membranes 55 (1991) 21

Separation of hydrogen through palladium thin film supported on a porous glass tube 56 (1991) 303

Preparation of a sol–gel derived thin membrane on a porous ceramic hollow fiber by the filtration technique 59 (1991) 73

Preparation and characterization of silicon based inorganic membrane for gas separation 59 (1991) 331

Methanol–hydrogen separation by capillary condensation in inorganic membranes 60 (1991) 185

Inorganic ultrafiltration membranes prepared by a combination of anodic film and sol–gel technologies 61 (1991) 215

Dynamic microfiltration of dilute slurries with a rotating ceramic membrane 62 (1991) 187

Gas separation properties of a new polymer/inorganic composite membrane 66 (1992) 129

Transport of water through an inorganic composite membrane 66 (1992) 227

Synthesis and characterization of unsupported ferric oxide ceramic membranes 70 (1992) 41

Transport studies with porous alumina membranes 71 (1992) 247

Adsorption, permeation, and diffusion of gases in microporous membranes. I. Adsorption of gases on microporous glass membranes 75 (1992) 221

Inserts
An investigation on the configuration of inserts in tubular ultrafiltration module to control concentration polarization 75 (1992) 197

Insulin delivery
Theoretical and experimental analysis of a hybrid bioartificial membrane pancreas: A distributed parameter model taking into account Starling fluxes 52 (1990) 351

Integrally-skinned asymmetric membranes
Influence of quench medium on the structures and gas permeation properties of polysulfone membranes made by wet and dry/wet phase inversion 71 (1992) 81

Interdiffusion coefficients
Binary and ternary interdiffusion of counter ions across cation exchange membrane 52 (1990) 143

Interfacial concentration
Determination of osmotic pressure and fouling resistances and their effects on performance of ultrafiltration membranes 74 (1992) 141

Interferometry
Investigation of ultrafiltration kinetics 58 (1991) 147

Interpenetrating polymer network
Cationic/anionic interpenetrating polymer network membranes for the pervaporation of ethanol–water mixture 52 (1990) 157

Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. I. Effect of synthesis temperature and molecular structure variation 60 (1991) 233

Synthesis of reactive composite membranes from Celgard 2400 and methacrylate monomers 67 (1992) 289

Computer simulation for the pervaporation process of water/ethanol mixture through interpenetrating polymer network (IPN) membranes 70 (1992) 193

Interpolymers
Salt and base separation with interpolymer type carboxylic ion-exchange membrane 65 (1992) 141

Water states in PE-poly(MA-co-DVB) interpolymer type carboxylic ion-exchange membranes 66 (1992) 89

Invertase
Transport and reaction behavior of invertase ultrafiltration membranes made from substituted polysulfone 64 (1991) 173

Ion adsorption
Membrane potential of separation membranes as affected by ion adsorption 71 (1992) 189

Ion channels
Facilitated ion transport through thin bilayers 54 (1990) 259

Ion exchange
Separation of yttrium in a hollow fiber membrane 74 (1992) 215

Ion-exchange membranes
The determination of diffusion coefficients of counter-ions in the ion-exchange membrane by means of batchwise Donnan dialytic experiments 53 (1990) 215

Modification of ion-exchange membrane surface by plasma process. Part 2. Monovalent cation permselective membrane from perfluorosulfonate cation exchange membrane 54 (1990) 163

Ion exchange membranes with preferential permselectivity for monovalent ions 54 (1990) 233

Competitive diffusion of hydrochloric acid and sodium chloride through an acid dialysis membrane 55 (1991) 79

Transport of electrolytes across charged membranes. Part IV. Frictional interactions of the neutral and alkaline permeants and the permeability/reflection phenomena 56 (1991) 99

Preparation of oxidatively stable cation-exchange membranes by the elimination of tertiary hydrogens 56 (1991) 143

Transport properties of anion exchange membranes in contact with hydrochloric acid solutions. Membranes for acid recovery by electrodialysis 57 (1991) 57

Concentration polarization in ion exchange membrane electrodialysis 57 (1991) 217

Electrodialytic production of gas-free sodium hydroxide based on Donnan breakdown 57 (1991) 321

Characterization of ion exchange membrane surfaces by means of X-ray photoelectron spectroscopy and SEM 58 (1991) 49

Relaxation of polymer chains dissolved in the liquid phase of membranes. I. Electroosmosis with oxidized collodion and collodion–poly(acrylic acid) membranes 58 (1991) 59

Electrodialysis water splitting technology 58 (1991) 117

Metal collection using chelating hollow fiber membrane 58 (1991) 221

Competition between the electrotransports of acetate and chloride ions through a polymeric anion exchange membrane 59 (1991) 265

Current–voltage curves for ion-exchange membranes. Contributions to the total potential drop 61 (1991) 177

Facilitated extraction and facilitated transport of non-ionic permeants through ion-exchange membranes: influence of the stability of the permeant/carrier complexes 61 (1991) 191

Electrical impedance of composite membranes based on polyelectrolyte complexes 62 (1991) 145

Interaction of composite membranes based on polyelectrolyte complexes with copper ions 62 (1991) 155

Swelling properties of partially hydrolyzed polyacrylamide gels and gelatin gels in aqueous media 64 (1991) 113

Dielectric theory of concentration polarization. Relaxation of capacitance and conductance for electrolyte solutions with locally varying conductivity 64 (1991) 153

Dielectric analysis of concentration polarization phenomena at cation-exchange membrane/solution interfaces by frequency variation and d.c. bias application 64 (1991) 163

Salt and base separation with interpolymer type carboxylic ion-exchange membrane 65 (1992) 141

Diffusion of aniline through perfluorosulfonate ion exchange membrane 65 (1992) 205

Water states in PE–poly(MA-co-DVB) interpolymer type carboxylic ion-exchange membranes 66 (1992) 89

Water transport in cation exchange membranes 66 (1992) 179

Determination of the streaming potential in ion-exchange membranes 67 (1992) 57

Solvent transport across anion-exchange membranes under a temperature difference and an osmotic pressure difference 67 (1992) 83

Ionic equilibria in ion-exchange membranes: a comparison of pore model predictions with experimental results 67 (1992) 211

Preparation of perfluorinated ion exchange membranes and their application in acid recovery 67 (1992) 263

Biased diffusion across ion-exchange membranes. Percolation theory approach 67 (1992) 273

Ammonia permeabilities of perfluorosulfonic membranes in various ionic forms 68 (1992) 43

Radiation synthesis of ion-exchange carboxylic fluorine containing membranes 68 (1992) 133

Transport of a zwitter ion across a composite ion-exchange membrane involving the dual sorption mechanism 69 (1992) 51

Electrotransport of alanine through ion-exchange membranes 69 (1992) 273

Methanol and water uptake, densities, equivalent volumes and thicknesses of several uni- and divalent ionic perfluorosulphonate exchange membranes (Nafion-117) and their methanol–water fractionation behaviour at 298 K 71 (1992) 69

Charge-mosaic membrane from gamma-irradiated poly(styrene–butadiene–4-vinylpyridine)triblock copolymer. II. Preliminary dialysis test 71 (1992) 129

Solvent transport across cation-exchange membranes under a temperature difference and under an osmotic pressure difference 71 (1992) 151

Advances in the use of perfluorinated cation exchange membranes in integrated water electrolysis and hydrogen/oxygen fuel cell systems 73 (1992) 87

Effects of temperature and ion transport on water splitting in bipolar membranes 73 (1992) 191

Neutralization dialysis for desalination 73 (1992) 305

Membrane transference numbers from a new emf method 74 (1992) 1

Electrokinetic transport of amino acids through a cation exchange membrane 75 (1992) 107

Effects of protonation on the transport of hydrophobic nitrogen heterocycles through perfluorosulfonate ionomer membranes 75 (1992) 293

Ion-exchange reaction
Cation-exchange reaction with accompanying current discharge 70 (1992) 267

Ionic charge
Mass transfer in Nafion membrane systems: Effects of ionic size and charge on selectivity 58 (1991) 175

Ionic diffusion
Water sorption and ionic diffusion in short side chain perfluorosulfonate ionomer membranes 69 (1992) 155

Ionic size
Mass transfer in Nafion membrane systems: Effects of ionic size and charge on selectivity 58 (1991) 175

Ionomer membranes
Behavior of water in perfluorinated ionomer membranes containing various monovalent cations 68 (1992) 1

Ion pathways
Scanning electrochemical microscopy of a porous membrane 58 (1991) 71

Ion permeation
An experimental study of ion permeation in multicomponent ion systems as a function of membrane charge density 64 (1991) 255

Ion selectivity
Bipolar reverse osmosis membrane for separating mono- and divalent ions 70 (1992) 153

Iontophoresis
A kinetic model for ion transport across skin 71 (1992) 257

Ion transfer
Mass transfer in Nafion membrane systems: Effects of ionic size and charge on selectivity 58 (1991) 175

Ion transport
Analysis of ion transport with fixed site carrier membranes 56 (1991) 229

IPN related membrane
Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. II. Effect of crosslinked state and annealing 75 (1992) 15

Iron oxide
Synthesis and characterization of unsupported ferric oxide ceramic membranes 70 (1992) 41

Irradiation, modification by
Modified polyethersulfone membranes 62 (1991) 201

Islets of Langerhans
Theoretical and experimental analysis of a hybrid bioartificial membrane pancreas: A distributed parameter model taking into account Starling fluxes 52 (1990) 351

Isomerization kinetics
Conformer isomerization kinetics in glassy amorphous poly(ethylene terephthalate) and their effect on penetrant sorption 72 (1992) 103

Isomer separations
Pervaporation of aromatic C_8-isomers 57 (1991) 257

Isotactic polypropylene membranes
Microporous membrane formation via thermally-induced phase separation. III. Effect of thermodynamic interactions on the structure of isotactic polypropylene membranes 64 (1991) 13

Isotope separation
$^{16}O/^{18}O$ and H/D separation factors for liquid/vapor permeation of water through an hydrophobic membrane 60 (1991) 319

K

Kerosene fractionation
Facilitated emulsion liquid membrane separation of complex hydrocarbon mixtures 56 (1991) 239

Kinetic modelling
Sorbitan monooleate (Span 80) decomposition during membrane ageing. A kinetic study 74 (1992) 9

Kinetics
Investigation of ultrafiltration kinetics 58 (1991) 147

Knudsen diffusion
A generalized model for the transport of gases in porous, non-porous, and leaky membranes. I. Application to single gases 75 (1992) 245

L

Lactose permeation
Effects of salt ions and deposit formation on the permeation of organic molecules in complex media in reverse osmosis 54 (1990) 339

Lag time
A general expression for the total release of diffusant through heterogeneous membranes 66 (1992) 241

Lamellar structures
Stabilization of the lamellar structure of phosphatidylcholine by complex formation with trehalose 73 (1992) 173

Laminar boundary layers
A diffusion model of Donnan dialysis under flow conditions 53 (1990) 45

Lanthanide extraction
Design of a liquid membrane system for extracting rare earths 51 (1990) 249

Lecithin
Transport through liquid membranes generated by lecithin, cholesterol and lecithin–cholesterol mixtures in the presence of prostaglandins 58 (1991) 211

Life support system
Mathematical modelling of multicomponent membrane permeators 52 (1990) 205

Limiting flux
Limiting flux phenomena in ultrafiltration of kraft black liquor 57 (1991) 187

Lipase
Hydrolysis of triolein by lipase in a hollow fiber reactor 74 (1992) 207

Hydrolysis of triolein by lipase in a hollow fiber reactor 74 (1992) 207

Lipid membranes
pH-responsive permeability of polyamide capsule membrane coated with lipid molecules and amphiphilic polypeptides 58 (1991) 1

Transport through liquid membranes generated by lecithin, cholesterol and lecithin–cholesterol mixtures in the presence of prostaglandins 58 (1991) 211

Permeation studies on supported lecithin liquid membranes 59 (1991) 27

Phospholipid polymerization and reconstitution of bacteriorhodopsin in photopolymerizable lipid vesicles 72 (1992) 21

Stabilization of the lamellar structure of phosphatidylcholine by complex formation with trehalose 73 (1992) 173

Lipid polymerization
Phospholipid polymerization and reconstitution of bacteriorhodopsin in photopolymerizable lipid vesicles 72 (1992) 21

Liposomes
Modelling and kinetics of light induced proton pumping of bacteriorhodopsin reconstituted liposomes 61 (1991) 325

Effect of crosslinking agent on the release of an aqueous marker from liposomes sequestered in collagen and chitosan gels 71 (1992) 161

Liquid/vapor permeation
$^{16}O/^{18}O$ and H/D separation factors for liquid/vapor permeation of water through an hydrophobic membrane 60 (1991) 319

Liquid bridge
Solvent-induced morphological change of microporous hollow fiber membranes 70 (1992) 217

Liquid chromatography
The effects of molecular width on permeation of organic solute through cellulose acetate reverse osmosis membranes 74 (1992) 95

Liquid crystals
Control of gas permeation via electrohydrodynamic convection in a liquid crystal membrane 74 (1992) 223

Liquid emulsion membranes
Water transport mechanisms in liquid emulsion membrane process for the separation of amino acids 51 (1990) 309

Liquid membranes
Liquid membranes for flue gas desulfurization 51 (1990) 105

Design of a liquid membrane system for extracting rare earths 51 (1990) 249

Degree of coupling for composite membranes: studies on cholesterol liquid membranes 51 (1990) 337

A new liquid membrane technology - Electrostatic pseudo liquid membrane 52 (1990) 77

Ion fluxes in corn roots measured by microelectrodes with ion-specific liquid membranes 53 (1990) 59

Mass transfer studies in liquid membrane hydrocarbon separations 54 (1990) 119

Silver nitrate refining using supported liquid membranes 54 (1990) 299

Application of supported liquid membranes for removal of nitrate, technetium (VII) and chromium (VI) from groundwater 55 (1991) 39

Stability of supported liquid membranes containing long-chain aliphatic amines as carriers 55 (1991) 65

Recovery of citric acid from fermentation beer using supported-liquid membranes 56 (1991) 127

Synthesis and properties of noncyclic polyether compounds. XVIII. A noncyclic polyether carrier exhibiting magnesium ion-selective transport 56 (1991) 153

Transport of amino acids and their phosphonic acid analogues through supported liquid membranes containing macrocyclic carriers. Experimental parameters 56 (1991) 167

Competitive, proton-coupled, alkali metal cation transport across polymer-supported liquid membranes containing sym-(decyl)-dibenzo-16-crown-5-oxyacetic acid: Variation of the alkyl 2-nitrophenyl ether membrane solvent 56 (1991) 195

Facilitated emulsion liquid membrane separation of complex hydrocarbon mixtures 56 (1991) 239

Effect of new surfactants on zinc extraction with liquid surfactant membranes 57 (1991) 161

Selective transport of lithium ions by an acyclic carboxylic ionophore with a quinaldate moiety through a bulk liquid membrane 57 (1991) 297

Transport through liquid membranes generated by lecithin, cholesterol and lecithin–cholesterol mixtures in the presence of prostaglandins 58 (1991) 211

Photo-stimulated coupled transport of electrons and protons across quinone-doped liquid polymer-supported biomimetic membrane 59 (1991) 1

Permeation studies on supported lecithin liquid membranes 59 (1991) 27

Selective separation of organic solutes by aqueous liquid surfactant membranes 59 (1991) 189

Drop size prediction in liquid membrane systems 60 (1991) 261

A larger-scale study of gas separation by hollow-fiber-contained liquid membrane permeator 62 (1991) 293

Selective transport of calcium ion from a mixed cation solution through an HDEHP/n-dodecane supported liquid membrane 64 (1991) 69

Carrier-mediated transport of uranyl ions across tributyl phosphate–dodecane liquid membranes 64 (1991) 93

Membrane material effect on copper coupled transport through liquid membranes 64 (1991) 129

Molten salt facilitated transport membranes. Part 1. Separation of oxygen from air at high temperatures 65 (1992) 21

Molten salt facilitated transport membranes. Part 2. Separation of ammonia from nitrogen and hydrogen at high temperatures 65 (1992) 31

An analytical solution for competitive facilitated membrane transport 65 (1992) 39

Transport of amino acids through organic liquid membranes. II. Aspects of the mechanisms 65 (1992) 47

Numerical simulation for liquid membrane permeation of metal ions in a continuous countercurrent column 66 (1992) 27

Experimental and modeling studies of a parasitic binding mechanism in facilitated membrane transport 66 (1992) 55

Nitrate removal using supported liquid membranes: transport mechanism 67 (1992) 107

Supported liquid membranes: instability effects 67 (1992) 121

Mechanism of supported liquid membrane degradation: emulsion formation 67 (1992) 133

Supported liquid membranes: stabilization by gelation 67 (1992) 149

New applications of crown ethers. 11. Structural effect of the counter anion on crown-ether mediated cation extraction and transport. A direct examination of the crown ether–cation complex in the organic phase of extraction and transport 69 (1992) 61

New applications of crown ethers. 12. "Double-cycle" transport mechanism for crown ether/2,6-di(*t*-butyl)-4-nitrophenol/alkylammonium salt system. Effect of reversed-micelle like aggregate of alkylammonium salts on cation transport through a liquid membrane 69 (1992) 75

A computational and experimental study of unsteady facilitated transport 69 (1992) 99

Novel membrane separation method using liquid and porous polymeric membranes 69 (1992) 131

A novel tetradentate hydroxamate as ion carrier in liquid membranes 69 (1992) 143

A physicochemical study of reverse transport system based on nonequilibrium thermodynamics 70 (1992) 277

A re-appraisal of modelling in a liquid surfactant membrane waste water cleanup process 70 (1992) 283

Improved analytical prediction of facilitation factors in facilitated transport 70 (1992) 289

Metal-ion uptake and release by reversed micelles: comparison of liquid membranes with direct liquid–liquid contact and with interfacial semipermeable membranes 72 (1992) 181

Gas separation processes in membrane absorber 73 (1992) 73

Coupled transport of amino acids through a supported liquid membrane. I. Experimental optimization 73 (1992) 203

Control of gas permeation via electrohydrodynamic convection in a liquid crystal membrane 74 (1992) 223

Specific membrane transport of copper(II) ion by a cooperative carrier composed of 1,7-diaza-15-crown-5 and palmitic acid 75 (1992) 61

Critical displacement pressure of a supported liquid membrane 75 (1992) 69

Pharmaceutical product recovery using a hollow fiber contained liquid membrane: A case study 75 (1992) 131

Effects of protonation on the transport of hydrophobic nitrogen heterocycles through perfluorosulfonate ionomer membranes 75 (1992) 293

Liquid membrane stability

Nitrate removal using supported liquid membranes: transport mechanism 67 (1992) 107

Supported liquid membranes: instability effects 67 (1992) 121

Mechanism of supported liquid membrane degradation: emulsion formation 67 (1992) 133

Supported liquid membranes: stabilization by gelation 67 (1992) 149

Liquid permeability

Permeation studies on supported lecithin liquid membranes 59 (1991) 27

Liquid permeability and separations

Regenerated cellulose membrane from cuoxam/zincoxene blend 56 (1991) 207

Facilitated emulsion liquid membrane separation of complex hydrocarbon mixtures 56 (1991) 239

Study of the swelling phenomena of liquid surfactant membranes 59 (1991) 183

Non-linear flow through compressible membranes and its relation to osmotic pressure 66 (1992) 37

Enhancement of membrane performance with employment of cellulose acetate blend 66 (1992) 79

Dependence of permeability through polyimide membranes on state of gas, vapor, liquid and supercritical fluid at high temperature 67 (1992) 29

Pervaporation through structurally unstable polymeric membranes 67 (1992) 167

Refractometric measurement of polarized layer structure: studies of hyaluronic acid ultrafiltration 68 (1992) 249

Development of new rod-type membranes for effluent decolorization: performance tests on model dye solutions 68 (1992) 307

Pervaporation membranes for ethanol–water mixture prepared by plasma polymerization of fluorocarbons. II. Perfluoropropane membranes 69 (1992) 109

Non-isothermal solute transport through PTFE membranes 69 (1992) 169

A re-appraisal of modelling in a liquid surfactant membrane waste water cleanup process 70 (1992) 283

Permeation rates of aqueous alcohol solutions in pervaporation through Nafion membranes 72 (1992) 31

Separation by coupling ultrafiltration and complexation of metallic species with industrial water soluble polymers. Application for removal or concentration of metallic cations 73 (1992) 313

Separation of isopropanol from water by pervaporation using silicone-based membranes 74 (1992) 171

Hydrolysis of triolein by lipase in a hollow fiber reactor 74 (1992) 207

Separation of yttrium in a hollow fiber membrane 74 (1992) 215

General treatment of liquid-phase boundary layer resistance in the pervaporation of dilute aqueous organics through tubular membranes 75 (1992) 29

Pervaporation of ethanol/water mixtures using novel hydrophobic membranes containing polydimethylsiloxane 75 (1992) 93

Liquid surfactant membranes
Study of the swelling phenomena of liquid surfactant membranes 59 (1991) 183

Kinetic study of the emulsion breakage during metals extraction by liquid surfactant membranes (LSM) from simulated and industrial effluents 70 (1992) 65

Lithium
Cation-exchange reaction with accompanying current discharge 70 (1992) 267

Properties of ion exchange membranes anisotropically combined with conducting polymers. III. Formation of lithium cell composed of lithium and anion exchange membranes with polypyrrole layer 72 (1992) 43

Lithium dodecylsulfate
Using micelles to determine the pore size of UF membranes 74 (1992) 279

Lithium transport
Selective transport of lithium ions by an acyclic carboxylic ionophore with a quinaldate moiety through a bulk liquid membrane 57 (1991) 297

Luminescence
Polymeric membranes and coupled enzymes in the design of biosensors 68 (1992) 217

M

Macrovoids
Microstructures in phase-inversion membranes. Part 1. Formation of macrovoids 73 (1992) 259

Microstructures in phase inversion memmbranes. Part 2. The role of a polymeric additive 73 (1992) 277

Magnesium ionophore
Synthesis and properties of noncyclic polyether compounds. XVIII. A noncyclic polyether carrier exhibiting magnesium ion-selective transport 56 (1991) 153

Mass transfer
Mass transfer in radiation-grafted pervaporation membranes 54 (1990) 131

Three layer membrane model for characterizing ultrafiltration membranes 60 (1991) 195

Mass transfer in ultrafiltration 61 (1991) 49

Optimal channel spacer design for ultrafiltration 62 (1991) 275

Predicting permeate flux in ultrafiltration on the basis of surface renewal concept 68 (1992) 107

Mass transfer in various hollow fiber geometries 69 (1992) 235

Pervaporation process: membrane conditioning and experimental mass transfer analysis 74 (1992) 105

Mass transfer coefficients
Mass transfer studies in liquid membrane hydrocarbon separations 54 (1990) 119

Reverse osmosis of whey. Determination of mass transfer coefficients 68 (1992) 301

Determination of osmotic pressure and fouling resistances and their effects on performance of ultrafiltration membranes 74 (1992) 141

Mass-transfer equation
On the calculation of membrane working surface using mass-transfer concepts 58 (1991) 139

Mass-transfer study
Investigation of ultrafiltration kinetics 58 (1991) 147

Mechano–chemical potential
A thermodynamic description of membrane equilibria, dissipation and transport 60 (1991) 169

Membralox
Protein adsorption and fouling in ceramic ultrafiltration membranes 55 (1991) 21

Membrane bioreactor
Aqueous–organic membrane bioreactors. Part I. A guide to membrane selection 71 (1992) 139

Membrane-bound enzymes
Modelling and kinetics of light induced proton pumping of bacteriorhodopsin reconstituted liposomes 61 (1991) 325

Swelling properties of partially hydrolyzed polyacrylamide gels and gelatin gels in aqueous media 64 (1991) 113

Transport and reaction behavior of invertase ultrafiltration membranes made from substituted polysulfone 64 (1991) 173

Membrane carrier
Transport of amino acids and their phosphonic acid analogues through supported liquid membranes containing macrocyclic carriers. Experimental parameters 56 (1991) 167

Membrane carrier: primene JM-T, amberlite LA-2, trilaurylamine
Application of supported liquid membranes for removal of nitrate, technetium (VII) and chromium (VI) from groundwater 55 (1991) 39

Stability of supported liquid membranes containing long-chain aliphatic amines as carriers 55 (1991) 65

Membrane cascades
Counter-current recycle membrane cascades for the separation of the boron isotopes in BF_3 54 (1990) 307

On the calculation of membrane working surface using mass-transfer concepts 58 (1991) 139

Membrane characterization
Surface fluorination of polysulfone asymmetric membranes and films 56 (1991) 77

Membrane pore characterization – comparison between single and multicomponent solute probe techniques 57 (1991) 271

Porous membrane of *Bombyx mori* silk fibroin: structure characterization, physical properties and application to glucose oxidase immobilization 59 (1991) 39

Critical points in the analysis of membrane pore structures by thermoporometry 66 (1992) 45

Characterization of hollow fiber hemodialysis membranes: pore size distribution and performance 73 (1992) 143

Membrane cleaning
Laboratory-scale investigations into the use of extremely thermophilic proteinases for cleaning ultrafiltration membranes fouled during whey processing 67 (1992) 93

Membrane compaction
Reverse osmosis treatment of multicomponent electrolyte solutions 72 (1992) 211

Membrane deformation
Controllable changes in the porous structure of polymeric nuclear track membranes 55 (1991) 299

Membrane distillation
Gas and vapour transport through microporous membranes. I. Knudsen–Poiseuille transition 53 (1990) 159

Gas and vapour transport through microporous membranes. II. Membrane distillation 53 (1990) 173

Non-isothermal water transport through membranes 56 (1991) 181

Non-isothermal solute transport through PTFE membranes 69 (1992) 169

Surface-modified hydrophilic membranes in membrane distillation 72 (1992) 189

Separation efficiency in vacuum membrane distillation 73 (1992) 217

Membrane extraction
Transport of phenol from aqueous solution to organic solvent through a microporous membrane made of cross-linked poly(4-vinylpyridine) 62 (1991) 219

Membrane extraction of silver by di(2-ethylhexyl)dithiophosphoric acid 70 (1992) 31

Facilitated diffusion in immobilized liquid membranes: Experimental verification of the "jumping" mechanism and percolation threshold in membrane transport 75 (1992) 1

Membrane filtration
Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

Membrane flux
Fouling in tangential-flow ultrafiltration: The effect of colloid size and coagulation pretreatment 52 (1990) 173

Membrane formation mechanism
Effect of nonsolvents on the mechanism of wet-casting membrane formation from EVAL copolymers 59 (1991) 15

Membrane fractionation
Increase in the efficiency of membrane fractionation 68 (1992) 263

Membrane lysis
Fluctuations of biomimetic membranes potential and membrane lysis, induced by surface-active glycine esters 66 (1992) 143

Membrane modification
The use of anionic surfactants for reducing fouling of ultrafiltration membranes: their effects and optimization 67 (1992) 249

Membrane modules

The pressure drop in membrane module with spacers 64 (1991) 103

Mass transfer in various hollow fiber geometries 69 (1992) 235

Membrane operation, oscillatory mode
Oscillatory mode of the operation of an asymmetric poly(vinyltrimethylsilane)membrane 60 (1991) 1

Membrane permeators
Mathematical modelling of multicomponent membrane permeators 52 (1990) 205

Membrane polyurethane
Vapor and gas permeability of polyurethane membranes. Part II. Effect of functional group 56 (1991) 279

Membrane potential, effect of ion adsorption on
Theory study of the effect of ion adsorption on membrane potential and its application to collodion membranes 53 (1990) 19

Membrane potentials
Energetics of active transport in inverted membrane vesicles of *Escherichia coli* 56 (1991) 327

An experimental study of ion permeation in multicomponent ion systems as a function of membrane charge density 64 (1991) 255

Water transport in cation exchange membranes 66 (1992) 179

Determination of some transport coefficients for the skin and porous layer of a composite membrane 69 (1992) 29

A physicochemical study of reverse transport system based on nonequilibrium thermodynamics 70 (1992) 277

Membrane potential of separation membranes as affected by ion adsorption 71 (1992) 189

Membrane potential theory
Electrochemical properties of asymmetric cellulose acetate membranes 52 (1990) 57

Membrane preparation
Cationic/anionic interpenetrating polymer network membranes for the pervaporation of ethanol–water mixture 52 (1990) 157

Porogen derived membranes. 1. Concept description and analysis 54 (1990) 271

Phase separation in polysulfone/solvent/water and polyethersulfone/solvent/water systems 59 (1991) 219

Composite membranes based on polyelectrolyte complexes 62 (1991) 131

Preparation of perfluorinated ion exchange membranes and their application in acid recovery 67 (1992) 263

Measurement and analysis of bath-side interfacial concentration gradients during phase inversion 74 (1992) 83

Membrane preparation and characterization
Preparation and properties of polyimide ultrafiltration membranes 60 (1991) 63

Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. I. Effect of synthesis temperature and molecular structure variation 60 (1991) 233

Modified polyethersulfone membranes 62 (1991) 201

Membrane preparation and structure
Preparation conditions affecting the permeability of polyethylene microfiltration membranes 52 (1990) 109

Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

Polyaramide hollow fibers for hydrogen/methane separation – Spinning and properties 53 (1990) 259

Polyethersulfone and polyphenylsulfone hollow fiber trilayer membranes spun from Lewis acid:base complexes – Structure determination by SEM, DSC, and oxygen plasma ablation 54 (1990) 29

Thin and composite high-flux membranes of perfluorosulfonated ion-exchange polymer 54 (1990) 51

Preparation of temperature-sensitive membranes by graft polymerization onto a porous membrane 55 (1991) 119

Surface fluorination of composite membranes. Part 1. Transport properties 55 (1991) 131

Surface fluorination of composite membranes. Part II. Characterization of the fluorinated layer 55 (1991) 149

Preparation and characterization of modified tubular ceramic membranes for use as catalyst supports 55 (1991) 199

Controllable changes in the porous structure of polymeric nuclear track membranes 55 (1991) 299

Preparation of oxidatively stable cation-exchange membranes by the elimination of tertiary hydrogens 56 (1991) 143

Regenerated cellulose membrane from cuoxam/zincoxene blend 56 (1991) 207

The permselectivity of polyorganosiloxanes containing ester functionalities 56 (1991) 217

Water flux and protein adsorption of a hollow fiber modified with hydroxyl groups 56 (1991) 289

Separation of hydrogen through palladium thin film supported on a porous glass tube 56 (1991) 303

Hydrogen permeable palladium–silver alloy membrane supported on porous ceramics 56 (1991) 315

The formation of microporous polyvinylidene difluoride membranes by phase separation 57 (1991) 1

A two step mechanism of diffusion-controlled ethylene vinyl alcohol membrane formation 57 (1991) 69

A method for the determination of the pore size distribution of molecular sieve materials and its application to the characterization of partially pyrolyzed polysilastyrene/porous glass composite membranes 57 (1991) 237

The resistance towards gas transport of the sublayer of asymmetric PPO hollow fiber membranes determined by plasma-etching 57 (1991) 307

Characterization of ion exchange membrane surfaces by means of X-ray photoelectron spectroscopy and SEM 58 (1991) 49

Effect of nonsolvents on the mechanism of wet-casting membrane formation from EVAL copolymers 59 (1991) 15

A diffusion-controlled model for wet-casting membrane formation 59 (1991) 169

Skin formation in heterogeneous polymerization reactions 59 (1991) 205

Preparation and characterization of silicon based inorganic membrane for gas separation 59 (1991) 331

Porous polycarbonate phase-inversion membranes 60 (1991) 25

Solubility and permeability of quenched poly(2-,6-dimethyl phenyleneoxide) with various microvoids 60 (1991) 103

Methanol–hydrogen separation by capillary condensation in inorganic membranes 60 (1991) 185

Asymmetric membrane formation via immersion precipitation method. I. Kinetic effect 60 (1991) 219

Preparation of water and alkali durable porous glass membrane coated on porous alumina tubing by sol–gel method 60 (1991) 307

Analysis of gas permeation through composite membranes 61 (1991) 1

Influence of composite membrane structure on pervaporation 61 (1991) 19

The influence of molecular mass of poly(vinyl chloride) on the structure and transport characteristics of ultrafiltration membranes 61 (1991) 131

Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

Characterization of reverse osmosis cellulose acetate membranes by gas adsorption method: effect of casting variables and chlorine damage 62 (1991) 325

Microporous membrane formation via thermally-induced phase separation. II. Liquid–liquid phase separation 64 (1991) 1

Microporous membrane formation via thermally-induced phase separation. III. Effect of thermodynamic interactions on the structure of isotactic polypropylene membranes 64 (1991) 13

Microporous membrane formation via thermally-induced phase separation. IV. Effect of isotactic polypropylene crystallization kinetics on membrane structure 64 (1991) 31

Microporous membrane formation via thermally-induced phase separation. V. Effect of diluent mobility and crystallization on the structure of isotactic polypropylene membranes 64 (1991) 41

Microporous membrane formation via thermally-induced phase separation. VI. Effect of diluent morphology and relative crystallization kinetics on polypropylene membrane structure 64 (1991) 55

Mass transfer dynamics of the evaporation step in membrane formation by phase inversion 64 (1991) 81

The formation of asymmetric hollow fibre membranes for gas separation, using PPE of different intrinsic viscosities 64 (1991) 121

Preparation of polyacrylonitrile ultrafiltration membranes from polymer solutions containing glycerol 64 (1991) 183

Formation of dynamic UF membrane with fine Zr particles 64 (1991) 273

Encapsulation by interfacial polycondensation. I. The capsule production and a model for wall growth 65 (1992) 59

Encapsulation by interfacial polycondensation. II. The membrane wall structure and the rate of the wall growth 65 (1992) 69

Surface pore structures of micro- and ultrafiltration membranes imaged with the atomic force microscope 65 (1992) 101

Electrochemical synthesis of ultrathin film composite membranes 65 (1992) 113

Formation of asymmetric polysulfone membranes by immersion precipitation. Part I. Modelling mass transport during gelation 65 (1992) 213

Formation of asymmetric polysulfone membranes by immersion precipitation. Part II. The effects of casting solution and gelation bath compositions on membrane structure and skin formation 65 (1992) 231

Preparation of hollow fiber membranes from polyetherimide for gas separation 65 (1992) 295

Critical points in the analysis of membrane pore structures by thermoporometry 66 (1992) 45

Environment-sensitive properties of polymethacrylic acid-grafted polyethylene membranes 66 (1992) 69

Enhancement of membrane performance with employment of cellulose acetate blend 66 (1992) 79

Gas separation properties of a new polymer/inorganic composite membrane 66 (1992) 129

Vapor permeation and pervaporation separation of water–ethanol mixtures through polyimide membranes 68 (1992) 53

The surface structure and morphology of polyvinylidene fluoride microfiltration membranes by atomic force microscopy 68 (1992) 65

Radiation synthesis of ion-exchange carboxylic fluorine containing membranes 68 (1992) 133

Thermoporometry. Modelling and simulation of a mesoporous solid 68 (1992) 271

A study of pore size distribution and mean pore size on unsupported gamma-alumina membranes prepared by modifications introduced in the alkoxide hydrolysis step 69 (1992) 21

New applications of crown ethers. 11. Structural effect of the counter anion on crown-ether mediated cation extraction and transport. A direct examination of the crown ether–cation complex in the organic phase of extraction and transport 69 (1992) 61

New applications of crown ethers. 12. "Double-cycle" transport mechanism for crown ether/2,6-di(*t*-butyl)-4-nitrophenol/alkylammonium salt system. Effect of reversed-micelle like aggregate of alkylammonium salts on cation transport through a liquid membrane 69 (1992) 75

Pervaporation membranes for ethanol–water mixture prepared by plasma polymerization of fluorocarbons. II. Perfluoropropane membranes 69 (1992) 109

Surface studies on the ultrathin membrane prepared by spreading the polymer solution on a water surface 69 (1992) 121

A novel tetradentate hydroxamate as ion carrier in liquid membranes 69 (1992) 143

Scintillation proximity assay for measuring benzene absorption in a polyethylene membrane 69 (1992) 179

Preparation of asymmetric gas separation membranes with high selectivity by a dual-bath coagulation method 70 (1992) 17

Surface analysis of poly(vinylidene difluoride) membranes 70 (1992) 53

Simulation of the structure of polymer membranes: pore properties and preliminary results for particulate blinding 70 (1992) 85

Charge-mosaic membrane from gamma-irradiated poly(styrene–butadiene–4-vinylpyridine)triblock copolymer. II. Preliminary dialysis test 71 (1992) 129

Characterization of microfiltration membranes by image analysis of electron micrographs. Part I. Method development 71 (1992) 221

Characterization of microfiltration membranes by image analysis of electron micrographs. Part II. Functional and morphological parameters 71 (1992) 233

Transport studies with porous alumina membranes 71 (1992) 247

Ultrafiltation membranes from PVDF/PMMA blends 73 (1992) 25

Characterization of hollow fiber hemodialysis membranes: pore size distribution and performance 73 (1992) 143

Microstructures in phase-inversion membranes. Part 1. Formation of macrovoids 73 (1992) 259

Microstructures in phase inversion membranes. Part 2. The role of a polymeric additive 73 (1992) 277

Preparation of composite membranes by a spin coating process 74 (1992) 233

Barriers to flow in semicrystalline ionomers. A procedure for preparing melt-processed perfluorosulfonate ionomer films and membranes 75 (1992) 7

Surface characterization of ethylene–vinyl alcohol copolymer membranes prepared under various conditions 75 (1992) 163

Membrane reactors

Membrane reactors for the investigation of product inhibition of enzyme activity 52 (1990) 339

Continuous membrane fermentor separator for ethanol fermentation 57 (1991) 21

Formaldehyde production from methanol using a porous Vycor glass membrane reactor 57 (1991) 95

Functional capsule membranes. Part 32. Lipase-immobilized capsule membranes as a reactor in ester syntheses and hydrolyses in organic solvents 59 (1991) 101

Enzymatic synthesis of n-butyl oleate in a hollow fiber membrane reactor 61 (1991) 315

Evaluation of palladium-impregnation on the performance of a Vycor glass catalytic membrane reactor 65 (1992) 259

Basic experimental study on palladium membrane reactors 66 (1992) 149

Membrane reactor with double mass transfer: membrane requirements, fouling analysis and flux prediction during ultrafiltration of cell culture medium 69 (1992) 259

Use of a membrane reactor to improve selectivity to intermediate products in consecutive catalytic reactions 70 (1992) 129

Pervaporation membranes endowed with catalytic properties, based on polymer blends 73 (1992) 129

Hydrolysis of triolein by lipase in a hollow fiber reactor 74 (1992) 207

Surface diffusion of hydrogen sulfide and sulfur dioxide in alumina membranes in the continuum regime 74 (1992) 263

Membranes containing selective flakes
Membranes containing selective flakes 52 (1990) 275

Membrane selectivity
Increase in the efficiency of membrane fractionation 68 (1992) 263

Membrane sensors
Surface-enhanced Raman scattering (SERS) using polymer (cellulose acetate and Nafion) membranes impregnated with fine silver particles 55 (1991) 227

Modelling of the behaviour of microporous membrane sensors used in the detection of volatile organic solutes in aqueous media 59 (1991) 249

Membrane separation
Predictability of transport equations for pervaporation on the basis of pore-flow mechanism 70 (1992) 163

Membrane-separation systems
Synergistic, membrane-based hybrid separation systems 62 (1991) 347

Membrane solvent extraction
Removal of *p*-nitrophenol from aqueous solution by membrane-supported solvent extraction 75 (1992) 277

Membrane stability
Stability of supported liquid membranes containing long-chain aliphatic amines as carriers 55 (1991) 65

Preparation of oxidatively stable cation-exchange membranes by the elimination of tertiary hydrogens 56 (1991) 143

Concentration of amino acids by a liquid emulsion membrane with a cationic extractant 70 (1992) 225

Membrane structure
Determination of surface dense layer structure parameters of the asymmetric membrane by gas permeation method 52 (1990) 97

Membrane transport properties in relation to microscopic and macroscopic structural inhomogeneity 52 (1990) 305

Quantitative microscopic study of surface characteristics of ultrafiltration membranes 54 (1990) 89

Non-equilibrium microstructural and transport characteristics of glassy poly(ethylene terephthalate) 60 (1991) 41

First investigations on the use of scanning tunnelling microscopy (STM) for the characterisation of porous membranes 67 (1992) 295

Influence of quench medium on the structures and gas permeation properties of polysulfone membranes made by wet and dry/wet phase inversion 71 (1992) 81

Structure and gas permeability of silylated polyphenylene oxide 71 (1992) 97

Coupling-constant description of coupled flow and diffusion 74 (1992) 253

Membrane surface
Characterization of ion exchange membrane surfaces by means of X-ray photoelectron spectroscopy and SEM 58 (1991) 49

Membrane-surfactant interaction
The influence of nonionic and ionic surfactants on hydrophobic and hydrophilic ultrafiltration membranes 56 (1991) 49

Membrane-system design
Synergistic, membrane-based hybrid separation systems 62 (1991) 347

Membrane transport
Statistical-mechanical theory of membrane transport 51 (1990) 1

Pervaporation through dense membrane: Calculation method 54 (1990) 285

Preliminary investigation of thin film composite reverse osmosis membranes developed from SAN as support membranes 71 (1992) 201

A generalized model for the transport of gases in porous, non-porous, and leaky membranes. I. Application to single gases 75 (1992) 245

Membrane vesicles
Energetics of active transport in inverted membrane vesicles of *Escherichia coli* 56 (1991) 327

Membrane working surface
On the calculation of membrane working surface using mass-transfer concepts 58 (1991) 139

Metal extraction
A new liquid membrane technology - Electrostatic pseudo liquid membrane 52 (1990) 77

Kinetic study of the emulsion breakage during metals extraction by liquid surfactant membranes (LSM) from simulated and industrial effluents 70 (1992) 65

Metal ion permeation
Numerical simulation for liquid membrane permeation of metal ions in a continuous countercurrent column 66 (1992) 27

Metal-ion uptake
Metal-ion uptake and release by reversed micelles: comparison of liquid membranes with direct liquid–liquid contact and with interfacial semipermeable membranes 72 (1992) 181

Metal membranes
Separation of hydrogen through palladium thin film supported on a porous glass tube 56 (1991) 303

Basic experimental study on palladium membrane reactors 66 (1992) 149

Metal oxide
Ultrafiltration of protein solutions on ZrO_2 membranes. The influence of surface chemistry and solution chemistry on adsorption 74 (1992) 289

Metal recovery
Silver nitrate refining using supported liquid membranes 54 (1990) 299

Metal sulfate dialysis
Estimation of equilibrium compositions in dialysis of aqueous solutions of metal sulfates, $MeSO_4$, on cation-exchange membranes 60 (1991) 157

Metal transport
Transport of metals through gelled supported liquid membranes containing carrier 71 (1992) 41

Methyl methacrylate polymerization
Skin formation in heterogeneous polymerization reactions 59 (1991) 205

Metrology
Thermoporometry. Modelling and simulation of a mesoporous solid 68 (1992) 271

Mica
Gas barrier improvement using vermiculite and mica in polymer films 55 (1991) 173

Micelles
Selective separation of organic solutes by aqueous liquid surfactant membranes 59 (1991) 189

Using micelles to determine the pore size of UF membranes 74 (1992) 279

Michaelis equation
Kinetics of membrane-bound enzymes: Validity of quasi-steady-state approximation for a Michaelis–Menten-type reaction 74 (1992) 159

Michaelis–Menten-type reactions
Kinetics of membrane-bound enzymes: Validity of quasi-steady-state approximation for a Michaelis–Menten-type reaction 74 (1992) 159

Microcapsules
Encapsulation by interfacial polycondensation. I. The capsule production and a model for wall growth 65 (1992) 59

Encapsulation by interfacial polycondensation. II. The membrane wall structure and the rate of the wall growth 65 (1992) 69

Microdomains
Charge mosaic composite membranes constructed by phase growth 54 (1990) 75

Microelectrodes, ion-specific
Ion fluxes in corn roots measured by microelectrodes with ion-specific liquid membranes 53 (1990) 59

Microelectronics
Polymeric membranes and coupled enzymes in the design of biosensors 68 (1992) 217

Microencapsulation
Size distribution and zeta-potential of polyamide microcapsules 72 (1992) 163

Microenvironments
Diffusion-reaction of urea through multimembrane containing urease - Effects of microenvironments around urease and asymmetry of the membrane 54 (1990) 145

Microfibrils
Solvent-induced morphological change of microporous hollow fiber membranes 70 (1992) 217

Microfiltration
Water flux and protein adsorption of a hollow fiber modified with hydroxyl groups 56 (1991) 289

Dynamic microfiltration of dilute slurries with a rotating ceramic membrane 62 (1991) 187

Surface pore structures of micro- and ultrafiltration membranes imaged with the atomic force microscope 65 (1992) 101

A comprehensive model for cross-flow filtration incorporating polydispersity of the influent 65 (1992) 173

Environment-sensitive properties of polymethacrylic acid-grafted polyethylene membranes 66 (1992) 69

Transport of water through an inorganic composite membrane 66 (1992) 227

The surface structure and morphology of polyvinylidene fluoride microfiltration membranes by atomic force microscopy 68 (1992) 65

Fouling mechanisms of membranes during protein ultrafiltration 68 (1992) 79

Improvement of crossflow microfiltration performances with flocculation 68 (1992) 241

Simulation of the structure of polymer membranes: pore properties and preliminary results for particulate blinding 70 (1992) 85

Permeate flux enhancement by pressure and flow pulsations in microfiltration with mineral membranes 70 (1992) 257

Water/acetone permeability of porous hollow-fiber membrane containing diethylamino groups on the grafted polymer branches 71 (1992) 1

Hydrodynamic aspects of crossflow microfiltration. Analysis of particle deposition at the membrane surface 71 (1992) 29

Characterization of microfiltration membranes by image analysis of electron micrographs. Part I. Method development 71 (1992) 221

Characterization of microfiltration membranes by image analysis of electron micrographs. Part II. Functional and morphological parameters 71 (1992) 233

The transversal flow microfiltration module. Theory, design, realization and experiments 73 (1992) 153

Microfiltration graft polymerization
Preparation of temperature-sensitive membranes by graft polymerization onto a porous membrane 55 (1991) 119

Microfiltration membranes
Properties of microfiltration membranes. Part II. Adsorption of bovine serum albumin at aluminium oxide membranes 51 (1990) 189

Preparation conditions affecting the permeability of polyethylene microfiltration membranes 52 (1990) 109

Micromolecular transport
Micromolecular transport in oriented glassy polymer films studied by a variety of techniques 52 (1990) 325

Micropore filling
Adsorption, permeation, and diffusion of gases in microporous membranes. I. Adsorption of gases on microporous glass membranes 75 (1992) 221

Micropores, appearance and collapse of
Oscillatory mode of the operation of an asymmetric poly(vinyltrimethylsilane)membrane 60 (1991) 1

Microporous and porous membranes
Controllable changes in the porous structure of polymeric nuclear track membranes 55 (1991) 299

Investigation of efficiency of gas separation on nuclear track membranes with ultra-small pores 55 (1991) 311

Effects of protein fouling on the apparent pore size distribution of sieving membranes 56 (1991) 13

Regenerated cellulose membrane from cuoxam/zincoxene blend 56 (1991) 207

Water flux and protein adsorption of a hollow fiber modified with hydroxyl groups 56 (1991) 289

Scanning electrochemical microscopy of a porous membrane 58 (1991) 71

The study of the swelling of an ultrafiltration membrane under the influence of solvents by thermoporometry and measurement of permeability 58 (1991) 191

Metal collection using chelating hollow fiber membrane 58 (1991) 221

Permeation studies on supported lecithin liquid membranes 59 (1991) 27

A new transport model for pervaporation 59 (1991) 133

A study on the pervaporation of ethanol/water mixtures on the basis of pore flow model 59 (1991) 151

Surface diffusion of organic vapor mixtures through porous glass 59 (1991) 233

Modelling of the behaviour of microporous membrane sen-

sors used in the detection of volatile organic solutes in aqueous media 59 (1991) 249

Porous polycarbonate phase-inversion membranes 60 (1991) 25

Solubility and permeability of quenched poly(2-,6-dimethyl phenyleneoxide) with various microvoids 60 (1991) 103

Surface pore structures of micro- and ultrafiltration membranes imaged with the atomic force microscope 65 (1992) 101

A statistical mechanics approach to the separation of methane and nitrogen using capillary condensation in a microporous membrane 65 (1992) 163

Formation of asymmetric polysulfone membranes by immersion precipitation. Part I. Modelling mass transport during gelation 65 (1992) 213

Formation of asymmetric polysulfone membranes by immersion precipitation. Part II. The effects of casting solution and gelation bath compositions on membrane structure and skin formation 65 (1992) 231

Preparation of hollow fiber membranes from polyetherimide for gas separation 65 (1992) 295

Critical points in the analysis of membrane pore structures by thermoporometry 66 (1992) 45

Environment-sensitive properties of polymethacrylic acid-grafted polyethylene membranes 66 (1992) 69

Enhancement of membrane performance with employment of cellulose acetate blend 66 (1992) 79

Gas separation properties of a new polymer/inorganic composite membrane 66 (1992) 129

Gas transport and separation with ceramic membranes. Part II. Synthesis and separation properties of microporous membranes 66 (1992) 271

Pervaporation through structurally unstable polymeric membranes 67 (1992) 167

The surface structure and morphology of polyvinylidene fluoride microfiltration membranes by atomic force microscopy 68 (1992) 65

Modelling macromolecular diffusion through a porous medium 68 (1992) 93

Thermoporometry. Modelling and simulation of a mesoporous solid 68 (1992) 271

Development of new rod-type membranes for effluent decolorization: performance tests on model dye solutions 68 (1992) 307

Use of sealed end hollow fibers for bubbleless membrane aeration: experimental studies 69 (1992) 1

The use of independently sealed microporous hollow fiber membranes for oxygenation of water: model development 69 (1992) 11

A study of pore size distribution and mean pore size on unsupported gamma-alumina membranes prepared by modifications introduced in the alkoxide hydrolysis step 69 (1992) 21

Novel membrane separation method using liquid and porous polymeric membranes 69 (1992) 131

Non-isothermal solute transport through PTFE membranes 69 (1992) 169

Surface analysis of poly(vinylidene difluoride) membranes 70 (1992) 53

Characterization of microfiltration membranes by image analysis of electron micrographs. Part I. Method development 71 (1992) 221

Characterization of microfiltration membranes by image analysis of electron micrographs. Part II. Functional and morphological parameters 71 (1992) 233

Transport studies with porous alumina membranes 71 (1992) 247

Ultrafiltation membranes from PVDF/PMMA blends 73 (1992) 25

Separation efficiency in vacuum membrane distillation 73 (1992) 217

Selective removal of H_2S from sour gas with microporous membranes. Part I. Application in a gas–liquid system 73 (1992) 293

Removal of *p*-nitrophenol from aqueous solution by membrane-supported solvent extraction 75 (1992) 277

Microporous membranes

Ammonia removal from water using microporous hollow fibers 51 (1990) 127

On the introduction of the pore wall charge in the space-charge model for microporous membranes 51 (1990) 161

Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Gas and vapour transport through microporous membranes. I. Knudsen–Poiseuille transition 53 (1990) 159

Gas and vapour transport through microporous mem-

branes. II. Membrane distillation 53 (1990) 173

Pervaporation through dense membrane: Calculation method 54 (1990) 285

The formation of microporous polyvinylidene difluoride membranes by phase separation 57 (1991) 1

Bubble point measurements on large areas of microporous membranes 60 (1991) 253

Transport of phenol from aqueous solution to organic solvent through a microporous membrane made of cross-linked poly(4-vinylpyridine) 62 (1991) 219

Better hollow fiber contactors 62 (1991) 371

Microporous membrane formation via thermally-induced phase separation. II. Liquid–liquid phase separation 64 (1991) 1

Microporous membrane formation via thermally-induced phase separation. III. Effect of thermodynamic interactions on the structure of isotactic polypropylene membranes 64 (1991) 13

Microporous membrane formation via thermally-induced phase separation. IV. Effect of isotactic polypropylene crystallization kinetics on membrane structure 64 (1991) 31

Microporous membrane formation via thermally-induced phase separation. V. Effect of diluent mobility and crystallization on the structure of isotactic polypropylene membranes 64 (1991) 41

Microporous membrane formation via thermally-induced phase separation. VI. Effect of diluent morphology and relative crystallization kinetics on polypropylene membrane structure 64 (1991) 55

Protein type effects on steady-state crossflow membrane ultrafiltration fluxes and protein transmission 70 (1992) 177

Solvent-induced morphological change of microporous hollow fiber membranes 70 (1992) 217

Prediction of limiting flux in ultrafiltration of kraft black liquor 72 (1992) 137

Critical displacement pressure of a supported liquid membrane 75 (1992) 69

Adsorption, permeation, and diffusion of gases in microporous membranes. I. Adsorption of gases on microporous glass membranes 75 (1992) 221

Adsorption, permeation, and diffusion of gases in microporous membranes. II. Permeation of gases in microporous glass membranes 75 (1992) 233

Microporous polypropylene membranes
A larger-scale study of gas separation by hollow-fiber-contained liquid membrane permeator 62 (1991) 293

Microporous separator
Modification of Daramic, microporous separator, for redox flow battery applications 75 (1992) 81

Microvoids
Solubility and permeability of quenched poly(2-,6-dimethyl phenyleneoxide) with various microvoids 60 (1991) 103

Mineral membranes
Membrane reactor with double mass transfer: membrane requirements, fouling analysis and flux prediction during ultrafiltration of cell culture medium 69 (1992) 259

Permeate flux enhancement by pressure and flow pulsations in microfiltration with mineral membranes 70 (1992) 257

Mixed conductor
A new class of oxygen selective chemically driven nonporous ceramic membranes. Part I. A-site doped perovskites 75 (1992) 151

Mixed solutes
Criteria for fouling layer disengagement during filtration of feeds containing a wide range of solutes 73 (1992) 181

Mixer–settler
Multisolute extraction of organic acids by emulsion liquid membranes. II. Continuous flow experiments and models 53 (1990) 105

Modeling
Formation of asymmetric polysulfone membranes by immersion precipitation. Part I. Modelling mass transport during gelation 65 (1992) 213

A nonideal model for analysis of gas separation permeators 65 (1992) 247

Kinetic study of the emulsion breakage during metals extraction by liquid surfactant membranes (LSM) from simulated and industrial effluents 70 (1992) 65

Use of a membrane reactor to improve selectivity to intermediate products in consecutive catalytic reactions 70 (1992) 129

Models
Models and analyses of membrane gas permeators 73 (1992) 1

Model studies
Dynamics of washing-out dialyzers with hollow-fiber membranes 58 (1991) 201

Concentration polarisation in a constant flux ultrafiltration rig: prediction of bulk protein concentrations using a lumped parameter model 59 (1991) 277

Drop size prediction in liquid membrane systems 60 (1991) 261

Experimental verification of the shear-induced hydrodynamic diffusion model of crossflow microfiltration 62 (1991) 249

Model system
Degree of coupling for composite membranes: studies on cholesterol liquid membranes 51 (1990) 337

Transport through liquid membranes generated by lecithin, cholesterol and lecithin–cholesterol mixtures in the presence of prostaglandins 58 (1991) 211

Module design
The transversal flow microfiltration module. Theory, design, realization and experiments 73 (1992) 153

Calculation of the entrance length of the concentration boundary layer in ultrafiltration and its influence on scale-up 74 (1992) 37

Modules
Better hollow fiber contactors 62 (1991) 371

Approximate solutions for gas permeators separating binary mixtures 66 (1992) 103

Use of sealed end hollow fibers for bubbleless membrane aeration: experimental studies 69 (1992) 1

The use of independently sealed microporous hollow fiber membranes for oxygenation of water: model development 69 (1992) 11

Separation of propylene and propane by polyimide hollow-fiber membrane module 73 (1992) 37

Gas separation processes in membrane absorber 73 (1992) 73

Neutralization dialysis for desalination 73 (1992) 305

An investigation on the configuration of inserts in tubular ultrafiltration module to control concentration polarization 75 (1992) 197

Molecular sieve
A method for the determination of the pore size distribution of molecular sieve materials and its application to the characterization of partially pyrolyzed polysilastyrene/porous glass composite membranes 57 (1991) 237

Molecular sieve membrane
The detection of asymmetry in homogeneous membranes: Demonstration on a carbon molecular sieve membrane 75 (1992) 213

Molecular volume ratio
Relationship between permselectivity and permeability in pervaporation of water/alcohol mixture 65 (1992) 51

Molecular weights
Flux decline behaviour with low molecular weight solutes during ultrafiltration in an unstirred batch cell 72 (1992) 149

Molecular width
The effects of molecular width on permeation of organic solute through cellulose acetate reverse osmosis membranes 74 (1992) 95

Molten salt membranes
Molten salt facilitated transport membranes. Part 1. Separation of oxygen from air at high temperatures 65 (1992) 21

Molten salt facilitated transport membranes. Part 2. Separation of ammonia from nitrogen and hydrogen at high temperatures 65 (1992) 31

Monovalent cation permselectivity
Modification of ion-exchange membrane surface by plasma process. Part 2. Monovalent cation permselective membrane from perfluorosulfonate cation exchange membrane 54 (1990) 163

Monovalent ions
Ion exchange membranes with preferential permselectivity for monovalent ions 54 (1990) 233

Morgane membranes
Transport properties of anion exchange membranes in contact with hydrochloric acid solutions. Membranes for acid recovery by electrodialysis 57 (1991) 57

Multicomponent electrolyte solutions
Reverse osmosis treatment of multicomponent electrolyte solutions 72 (1992) 211

Myoblast fusion
Effects of alkali metal cation on myoblast membrane electrical properties during *in vitro* myogenic fusion 65 (1992) 7

Myogenesis
Effects of alkali metal cation on myoblast membrane electrical properties during *in vitro* myogenic fusion 65 (1992) 7

N

Nafion
Interpretation of transport coefficients in Nafion using a parallel pore model 67 (1992) 227

Nafion-117
Methanol and water uptake, densities, equivalent volumes and thicknesses of several uni- and divalent ionic perfluorosulphonate exchange membranes (Nafion-117) and their methanol–water fractionation behaviour at 298 K 71 (1992) 69

Nafion membranes
Surface-enhanced Raman scattering (SERS) using polymer (cellulose acetate and Nafion) membranes impregnated with fine silver particles 55 (1991) 227

Transport of electrolytes across charged membranes. Part IV. Frictional interactions of the neutral and alkaline permeants and the permeability/reflection phenomena 56 (1991) 99

Mass transfer in Nafion membrane systems: Effects of ionic size and charge on selectivity 58 (1991) 175

N-Butyl oleate, synthesis of
Enzymatic synthesis of n-butyl oleate in a hollow fiber membrane reactor 61 (1991) 315

Near infrared spectroscopy
Water sorption and ionic diffusion in short side chain perfluorosulfonate ionomer membranes 69 (1992) 155

Neosepta AFN membrane
Competitive diffusion of hydrochloric acid and sodium chloride through an acid dialysis membrane 55 (1991) 79

Nernst–Planck equation
The determination of diffusion coefficients of counter-ions in the ion-exchange membrane by means of batchwise Donnan dialytic experiments 53 (1990) 215

Analysis of ion transport with fixed site carrier membranes 56 (1991) 229

Nernst–Einstein equations
Non-equilibrium thermodynamics as applied to membrane transport 57 (1991) 119

Neutralization dialysis
Neutralization dialysis for desalination 73 (1992) 305

Nitrate removal
On the nitrate and monovalent cation selectivity of ion exchange membranes used in drinking water purification 75 (1992) 265

Nitrogen purification
Applicability conditions of idealized flow models for gas separation by asymmetric membrane 55 (1991) 333

N-methyl pyrrolidone
Facilitated emulsion liquid membrane separation of complex hydrocarbon mixtures 56 (1991) 239

NMR, spin lattice relaxation time
Porous membrane of *Bombyx mori* silk fibroin: structure characterization, physical properties and application to glucose oxidase immobilization 59 (1991) 39

Non-electrolyte and electrolyte solution
Flow through porous media. Part XIII. Hydrodynamic flow studies of aqueous solutions of methanol, sucrose, sodium bicarbonate and their mixtures through antimony oxide membranes 62 (1991) 211

Non-isothermal transport
Non-isothermal solute transport through PTFE membranes 69 (1992) 169

Non-porous membranes
Sorption isotherms of alcohols in zeolite-filled silicone rubber and in PVA-composite membranes 70 (1992) 75

Nonsteady-state behavior
Kinetics of membrane-bound enzymes: Validity of quasi-steady-state approximation for a Michaelis–Menten-type reaction 74 (1992) 159

Nuclear acid bases
Transport of nuclear acid bases through cation exchange membranes from poly(styrenesulfonic acid) and poly(vinyl alcohol) 61 (1991) 227

Nuclear track membranes
Investigation of efficiency of gas separation on nuclear track membranes with ultra-small pores 55 (1991) 311

The deformation mechanisms of the porous structure of a poly(ethylene terephthalate) nuclear track membrane 64 (1991) 237

Nylon-4
Plasma deposition of vinyl acetate onto Nylon-4 membrane for pervaporation and evapomeation separation of aqueous alcohol mixtures 75 (1992) 171

Nylon-6
Preparation and properties of vinyl acetate-grafted Nylon 6 membrane by using homografting method 66 (1992) 169

Nylon-6/PAA blended membranes
Prediction of pervaporation separation characteristics for the methanol–pentane–nylon-6–poly(acrylic acid) blended membrane system 71 (1992) 211

O

Onsager reciprocal relations
Non-equilibrium thermodynamics as applied to membrane transport 57 (1991) 119

Optimal control
Dynamic optimization of a one-stage reverse-osmosis installation with respect to membrane fouling 65 (1992) 277

Optimization
Dynamic optimization of a one-stage reverse-osmosis installation with respect to membrane fouling 65 (1992) 277

The use of recycle permeator systems for gas mixture separation 67 (1992) 15

Organic coatings, epoxy based
Water and oxygen transport as performance parameters of paint films 52 (1990) 393

Organic separations
Permeation of chloromethanes in copolymers of chloroprene with methyl methacrylate and methacrylic acid 55 (1991) 239

Recovery of citric acid from fermentation beer using supported-liquid membranes 56 (1991) 127

Transport of amino acids and their phosphonic acid analogues through supported liquid membranes containing macrocyclic carriers. Experimental parameters 56 (1991) 167

Pervaporation of aromatic C_8-isomers 57 (1991) 257

Preparation and properties of polyimide ultrafiltration membranes 60 (1991) 63

Effect of boundry layer mass transfer resistance in the pervaporation of dilute organics 65 (1992) 147

Pervaporation through structurally unstable polymeric membranes 67 (1992) 167

Switchable gate membranes. Conducting polymer films for the selective transport of neutral solution species 70 (1992) 9

Permeation rates of aqueous alcohol solutions in pervaporation through Nafion membranes 72 (1992) 31

The effects of molecular width on permeation of organic solute through cellulose acetate reverse osmosis membranes 74 (1992) 95

Pervaporation of ethanol/water mixtures using novel hydrophobic membranes containing polydimethylsiloxane 75 (1992) 93

Effects of protonation on the transport of hydrophobic nitrogen heterocycles through perfluorosulfonate ionomer membranes 75 (1992) 293

Organo-silicon block copolymer
On the effect of organo-silicon block copolymer–solvent–precipitant system composition on asymmetric membrane surface layer thickness 65 (1992) 1

Osmosis
Non-linear flow through compressible membranes and its relation to osmotic pressure 66 (1992) 37

Solvent transport across anion-exchange membranes under a temperature difference and an osmotic pressure difference 67 (1992) 83

Osmotic pressure measurements of dissociating bovine hemoglobin 69 (1992) 213

Solvent transport across cation-exchange membranes under a temperature difference and under an osmotic pressure difference 71 (1992) 151

Effect of membrane structure and protein concentration on the osmotic reflection coefficient 72 (1992) 277

Osmosis, pressure retarded
Comparative mechanical efficiency of several plant configurations using a pressure-retarded osmosis energy converter 51 (1990) 323

Osmotic pressure
Flux decline behaviour with low molecular weight solutes during ultrafiltration in an unstirred batch cell 72 (1992) 149

Ovalbumin
Ultrafiltration of protein solutions on ZrO_2 membranes. The influence of surface chemistry and solution chemistry on adsorption 74 (1992) 289

Overlimiting current
Ion transfer across electrodialysis membranes in the overlimiting current range: stationary voltage current characteristics and current noise power spectra under different conditions of free convection 71 (1992) 105

Ion transfer across electrodialysis membranes in the overlimiting current range: chronopotentiometric studies 72 (1992) 171

Oxidized IgG
Microporous poly(caprolactam) hollow fibers for therapeutic affinity adsorption 74 (1992) 115

Oxygen enrichment
Studies in gas permeability and membrane gas separation in the Soviet Union 64 (1991) 191

Oxygen-enrichment of air
A new evaluation of membrane processes for the oxygen-enrichment of air. I. Identification of optimum operating conditions and process configuration 62 (1991) 13

A new evaluation of membrane processes for the oxygen-enrichment of air. II. Effects of economic parameters and membrane properties 62 (1991) 37

Oxygen permeability
Polarographic method for the determination of the permeability coefficient of polymers towards oxygen dissolved in water 65 (1992) 93

Oxygen permeation
Oxygen semipermeable solid oxide membrane composites prepared by electrochemical vapor deposition 66 (1992) 211

Oxygen permselectivity
Improvement of oxygen permselectivity through polydimethylsiloxane and poly(1-trimethylsilylpropyne) films by the addition of a small amount of poly(trifluoromethyl substituted arylacetylene) 57 (1991) 207

Oxygen plasma ablation
Polyethersulfone and polyphenylsulfone hollow fiber trilayer membranes spun from Lewis acid:base complexes – Structure determination by SEM, DSC, and oxygen plasma ablation 54 (1990) 29

Oxygen transfer
Use of sealed end hollow fibers for bubbleless membrane aeration: experimental studies 69 (1992) 1

The use of independently sealed microporous hollow fiber membranes for oxygenation of water: model development 69 (1992) 11

Oxygen transport
Transport of water dissolved oxygen in polymers via electrochemical technique 70 (1992) 207

P

Paint films
Water and oxygen transport as performance parameters of paint films 52 (1990) 393

Palladium
Basic experimental study on palladium membrane reactors 66 (1992) 149

Palladium impregnation
Evaluation of palladium-impregnation on the performance of a Vycor glass catalytic membrane reactor 65 (1992) 259

Palladium–silver alloy
Hydrogen permeable palladium–silver alloy membrane supported on porous ceramics 56 (1991) 315

Palmitic acid
Specific membrane transport of copper(II) ion by a cooperative carrier composed of 1,7-diaza-15-crown-5 and palmitic acid 75 (1992) 61

Specific membrane transport of copper(II) ion by a cooperative carrier composed of 1,7-diaza-15-crown-5 and palmitic acid 75 (1992) 61

Papain
Structural and enzymatic characterizations of papain immobilized onto vinyl alcohol/vinyl butyral copolymer membrane 66 (1992) 247

Particle charge
Incorporation of the cake pressure profiles in the calculation of the effect of particle charge on the permeability of filter cakes obtained in the filtration of colloids and particulates 72 (1992) 197

Particle trajectory
Hydrodynamic aspects of crossflow microfiltration. Analysis of particle deposition at the membrane surface 71 (1992) 29

Percolation theory
Biased diffusion across ion-exchange membranes. Percolation theory approach 67 (1992) 273

Percolation threshold
Analysis of ion transport with fixed site carrier membranes 56 (1991) 229

Perfluorosulfonate cation exchange membranes
Modification of ion-exchange membrane surface by plasma process. Part 2. Monovalent cation permselective membrane from perfluorosulfonate cation exchange membrane 54 (1990) 163

Perfluorosulfonate ionomer membranes
Water sorption and ionic diffusion in short side chain perfluorosulfonate ionomer membranes 69 (1992) 155

Perfluorosulfonate membranes
Diffusion of aniline through perfluorosulfonate ion exchange membrane 65 (1992) 205

Barriers to flow in semicrystalline ionomers. A procedure for preparing melt-processed perfluorosulfonate ionomer films and membranes 75 (1992) 7

Perfluorosulfonic acid membranes
Thin and composite high-flux membranes of perfluorosulfonated ion-exchange polymer 54 (1990) 51

Perfluorosulfonic acid polymer
Specifics of highly selective ammonia transport through gas-separating membranes based on perfluorinated copolymer in the form of hollow fibers 59 (1991) 117

Permeability
Correlation of separation factor versus permeability for polymeric membranes 62 (1991) 165

Novel polymeric membranes for separation of hydrocarbons 66 (1992) 1

Adsorption, permeation, and diffusion of gases in microporous membranes. II. Permeation of gases in microporous glass membranes 75 (1992) 233

Permeant/carrier complexes
Facilitated extraction and facilitated transport of non-ionic permeants through ion-exchange membranes: influence of the stability of the permeant/carrier complexes 61 (1991) 191

Permeant–polymer interactions
The diffusion mechanism in silicone rubber 73 (1992) 55

Permeate flux enhancement
Permeate flux enhancement by pressure and flow pulsations in microfiltration with mineral membranes 70 (1992) 257

Permeate flux resistances
Protein type effects on steady-state crossflow membrane ultrafiltration fluxes and protein transmission 70 (1992) 177

Permeation
Kinetic study of the emulsion breakage during metals extraction by liquid surfactant membranes (LSM) from simulated and industrial effluents 70 (1992) 65

Permeation of oxygen, argon and nitrogen through polymer membranes 71 (1992) 13

Sorbitan monooleate (Span 80) decomposition during membrane ageing. A kinetic study 74 (1992) 9

Concentration of aqueous dimethyl sulfoxide solutions through a chitosan membrane by permeation with a temperature difference 74 (1992) 183

Permeation mechanism
The energy of an ion in a cylindrical pore of a low dielectric membrane 52 (1990) 89

Permeation model
Extraction of amino acids by emulsion liquid membranes containing di(2-ethylhexyl)phosphoric acid as a carrier 58 (1991) 11

Effective diffusivity in W/O emulsion 68 (1992) 169

Permeation separation index
Development of crosslinked poly(vinyl alcohol) (type II) and permeation of acetic acid–water mixtures 62 (1991) 59

Permeation, with temperature difference
Concentration of aqueous dimethyl sulfoxide solutions through a chitosan membrane by permeation with a temperature difference 74 (1992) 183

Permporometry
Characterization of anisotropic UF-membranes: top layer thickness and pore structure 61 (1991) 73

Permporometry. The determination of the size distribution of active pores in UF membranes 71 (1992) 57

Permselectivity
Permselectivity of ionic solutes across charged dialysis membranes: *In vitro* and *in vivo* diffusive mass transfer 52 (1990) 191

Transport competition between proton and cupric ion through a cation-exchange membrane. I. Equilibrium properties of the system: membrane-$CuSO_4 + H_2SO_4$ solution 71 (1992) 181

Pervaporation
Pervaporation of liquid mixtures through poly(vinyl alcohol) (PVA) membranes. I. Study of water containing binary systems with complete and partial miscibility 51 (1990) 169

Pervaporation of liquid mixtures through poly(vinyl alcohol) (PVA) membranes. II. The binary systems methanol/1-propanol and methanol/dioxane and the ternary system water/methanol/1-propanol 51 (1990) 181

Pervaporation of water–ethanol mixtures through crosslinked and surface-modified poly(vinyl alcohol) membrane 51 (1990) 215

Terminology in pervaporation 51 (1990) 259

Pervaporation separation of aqueous mixtures using crosslinked poly(vinyl alcohol) (PVA). II. Permeation of ethanol–water mixtures 51 (1990) 273

Cationic/anionic interpenetrating polymer network membranes for the pervaporation of ethanol–water mixture 52 (1990) 157

Pervaporation process using a thermal gradient as the driving force 53 (1990) 127

Pervaporation of low volatility aromatics from water 53 (1990) 143

Pervaporation of isomeric butanols 54 (1990) 1

Mass transfer in radiation-grafted pervaporation membranes 54 (1990) 131

Pervaporation through dense membrane: Calculation method 54 (1990) 285

Analysis of some cases of pseudo-azeotropes in pervaporation 55 (1991) 1

Investigation of the separation factor between light and heavy water in the liquid/vapor membrane permeation process 55 (1991) 257

Continuous membrane fermentor separator for ethanol fermentation 57 (1991) 21

Pervaporation of aromatic C_8-isomers 57 (1991) 257

Pervaporation separation of aqueous mixtures using crosslinked polyvinyl alcohol membranes. III. Permeation of acetic acid–water mixtures 58 (1991) 33

A new transport model for pervaporation 59 (1991) 133

A study on the pervaporation of ethanol/water mixtures on the basis of pore flow model 59 (1991) 151

Oscillatory mode of the operation of an asymmetric poly(vinyltrimethylsilane)membrane 60 (1991) 1

Influence of composite membrane structure on pervaporation 61 (1991) 19

Dehydration of organic mixtures by pervaporation. Experimental and theoretical studies on ternary- and multicomponent systems 61 (1991) 31

Polyurethane structure design for pervaporation membranes 61 (1991) 65

Removal of trace organics from aqueous solutions. Effect of membrane thickness 61 (1991) 99

Collagen film as a new pervaporation membrane 61 (1991) 269

Development of crosslinked poly(vinyl alcohol) (type II) and permeation of acetic acid–water mixtures 62 (1991) 59

Membrane separation processes for the clean production of xanthates 62 (1991) 103

Scale-up of membrane systems from lab data 62 (1991) 309

Synergistic, membrane-based hybrid separation systems 62 (1991) 347

Pervaporation separation of water–ethanol through modified chitosan membranes. IV. Phosphorylated chitosan membranes 64 (1991) 145

Relationship between permselectivity and permeability in pervaporation of water/alcohol mixture 65 (1992) 51

Effect of boundry layer mass transfer resistance in the pervaporation of dilute organics 65 (1992) 147

Extraction of organics from aqueous solutions by pervaporation. A novel method for membrane characterization and process design in ethyl acetate separation 66 (1992) 193

Composite membranes prepared by concentrated emulsion polymerization and their use for pervaporation separation of water–acetic acid mixtures 66 (1992) 205

Behavioral analysis of air perstripping 67 (1992) 1

The separation of *meta*- and *para*-xylene by pervaporation in the presence of CBr_4, a selective feed-complexing agent 67 (1992) 67

Pervaporation through structurally unstable polymeric membranes 67 (1992) 167

Behavior of water in perfluorinated ionomer membranes containing various monovalent cations 68 (1992) 1

A new method for determining the diffusion coefficients of penetrants through polymeric membranes from steady state pervaporation experiments 68 (1992) 11

Vapor permeation and pervaporation separation of water–ethanol mixtures through polyimide membranes 68 (1992) 53

Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. I. Binary alcohol–water systems 68 (1992) 119

Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. II. The binary systems ammonia–water, methylamine–water, 1-propanol–methanol and the ternary system 1-propanol–methanol–water 68 (1992) 127

The separation of water and ethanol by pervaporation with PVA–PAN composite membranes 68 (1992) 141

Methods to improve flux during alcohol/water azeotrope separation by vapor permeation 68 (1992) 229

Direct heating of composite membranes in pervaporation and gas separation processes 68 (1992) 293

Pervaporation membranes for ethanol–water mixture prepared by plasma polymerization of fluorocarbons. II. Perfluoropropane membranes 69 (1992) 109

Sorption isotherms of alcohols in zeolite-filled silicone rubber and in PVA-composite membranes 70 (1992) 75

Prediction of pervaporation separation characteristics for

the ethanol–water–nylon-4 membrane system 70 (1992) 105

Predictability of transport equations for pervaporation on the basis of pore-flow mechanism 70 (1992) 163

Computer simulation for the pervaporation process of water/ethanol mixture through interpenetrating polymer network (IPN) membranes 70 (1992) 193

A study on pervaporation of aqueous benzyl alcohol solution by polydimethylsiloxane membrane 70 (1992) 249

Prediction of pervaporation separation characteristics for the methanol–pentane–nylon-6–poly(acrylic acid) blended membrane system 71 (1992) 211

Permeation rates of aqueous alcohol solutions in pervaporation through Nafion membranes 72 (1992) 31

The characteristics of a PAA–PSf composite membrane for separation of water–ethanol mixtures through pervaporation 72 (1992) 259

Preparation and characterization of thin-film zeolite–PDMS composite membranes 73 (1992) 119

Pervaporation membranes endowed with catalytic properties, based on polymer blends 73 (1992) 129

Separation efficiency in vacuum membrane distillation 73 (1992) 217

Pervaporation process: membrane conditioning and experimental mass transfer analysis 74 (1992) 105

Separation of isopropanol from water by pervaporation using silicone-based membranes 74 (1992) 171

Concentration of aqueous dimethyl sulfoxide solutions through a chitosan membrane by permeation with a temperature difference 74 (1992) 183

General treatment of liquid-phase boundary layer resistance in the pervaporation of dilute aqueous organics through tubular membranes 75 (1992) 29

Pervaporation of ethanol/water mixtures using novel hydrophobic membranes containing polydimethylsiloxane 75 (1992) 93

Plasma deposition of vinyl acetate onto Nylon-4 membrane for pervaporation and evapomeation separation of aqueous alcohol mixtures 75 (1992) 171

Pervaporation separation
Modelling of the pervaporation separation of ethanol–water mixtures through crosslinked poly(vinyl alcohol) membrane 67 (1992) 39

Pervaporation separation index
Pervaporation separation of aqueous mixtures using crosslinked poly(vinyl alcohol) (PVA). II. Permeation of ethanol–water mixtures 51 (1990) 273

Pervaporation separation of aqueous mixtures using crosslinked polyvinyl alcohol membranes. III. Permeation of acetic acid–water mixtures 58 (1991) 33

Pervaporation, terminology in
Terminology in pervaporation 51 (1990) 259

Phase growth
Charge mosaic composite membranes constructed by phase growth 54 (1990) 75

Phase inversion
Measurement and analysis of bath-side interfacial concentration gradients during phase inversion 74 (1992) 83

Phase-inversion membranes
Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

Microstructures in phase-inversion membranes. Part 1. Formation of macrovoids 73 (1992) 259

Microstructures in phase inversion memmbranes. Part 2. The role of a polymeric additive 73 (1992) 277

Phase-inversion processes
Influence of quench medium on the structures and gas permeation properties of polysulfone membranes made by wet and dry/wet phase inversion 71 (1992) 81

The characteristics of a PAA–PSf composite membrane for separation of water–ethanol mixtures through pervaporation 72 (1992) 259

Phase separation
Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Formation of asymmetric polysulfone membranes by immersion precipitation. Part I. Modelling mass transport during gelation 65 (1992) 213

Phase separation by annealing
Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. II. Effect of crosslinked state and annealing 75 (1992) 15

Phase separation, liquid–liquid
Microporous membrane formation via thermally-induced phase separation. II. Liquid–liquid phase separation 64 (1991) 1

Phase separation, thermally induced
Microporous membrane formation via thermally-induced

phase separation. II. Liquid–liquid phase separation 64 (1991) 1

Microporous membrane formation via thermally-induced phase separation. III. Effect of thermodynamic interactions on the structure of isotactic polypropylene membranes 64 (1991) 13

Microporous membrane formation via thermally-induced phase separation. IV. Effect of isotactic polypropylene crystallization kinetics on membrane structure 64 (1991) 31

Microporous membrane formation via thermally-induced phase separation. V. Effect of diluent mobility and crystallization on the structure of isotactic polypropylene membranes 64 (1991) 41

Microporous membrane formation via thermally-induced phase separation. VI. Effect of diluent morphology and relative crystallization kinetics on polypropylene membrane structure 64 (1991) 55

Phase transition
A two step mechanism of diffusion-controlled ethylene vinyl alcohol membrane formation 57 (1991) 69

Behavior of water in perfluorinated ionomer membranes containing various monovalent cations 68 (1992) 1

Phenolphthalein based polymers
Gas permeation behavior of phenolphthalein based heat-resistant polymers PEK-C and PES-C 53 (1990) 203

Phenol, removal of
Transport of phenol from aqueous solution to organic solvent through a microporous membrane made of cross-linked poly(4-vinylpyridine) 62 (1991) 219

Phosphatidylcholine
Stabilization of the lamellar structure of phosphatidylcholine by complex formation with trehalose 73 (1992) 173

Photografted membranes
Thermodynamic study of sorption of n-alkanes onto 5A zeolites immobilized in photosynthetic membranes 55 (1991) 263

Gas separation membranes containing carbon immobilized by photochemical grafting onto polymers 55 (1991) 273

pH-sensitive membrane
Transport of monocharged ions through environment-sensitive composite membranes based on polyelectrolyte complexes 62 (1991) 117

Piezodialysis
Charge-mosaic membrane from gamma-irradiated poly(styrene–butadiene–4-vinylpyridine)triblock copolymer. II. Preliminary dialysis test 71 (1992) 129

Plant configurations
Comparative mechanical efficiency of several plant configurations using a pressure-retarded osmosis energy converter 51 (1990) 323

Plasma deposition
Plasma deposition of vinyl acetate onto Nylon-4 membrane for pervaporation and evapomeation separation of aqueous alcohol mixtures 75 (1992) 171

Plasma etching
The resistance towards gas transport of the sublayer of asymmetric PPO hollow fiber membranes determined by plasma-etching 57 (1991) 307

Plasmafiltration
Kinetics of concentration-polarization formation in cross-flow filtration of plasma from blood: experimental results 72 (1992) 267

Plasma fractionation
Effect of permeate to feed ratio on protein recovery in membrane plasma fractionation 60 (1991) 87

Plasma polymerization
Modification of ion-exchange membrane surface by plasma process. Part 2. Monovalent cation permselective membrane from perfluorosulfonate cation exchange membrane 54 (1990) 163

Surface-modified hydrophilic membranes in membrane distillation 72 (1992) 189

Plasma polymerized membranes
Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

Pervaporation membranes for ethanol–water mixture prepared by plasma polymerization of fluorocarbons. II. Perfluoropropane membranes 69 (1992) 109

Characterization of plasma-treated poly(hydroxybutyrate) membrane surfaces by ESCA and contact angle measurements 73 (1992) 163

Plasma treatment
A one-side hydrophilic polypropylene membrane prepared by plasma treatment 53 (1990) 275

Plasticization
Permeation and plasticization behavior of glassy polymers: a WAXD interpretation 71 (1992) 117

Penetrant-plasticized permeation in polymethylmethacrylate 74 (1992) 27

Plasticization effects on the gas permeability and permselectivity of polymer membranes 75 (1992) 47

Platelet adhesion
Partially cationized cellulose for non-thrombogenic membrane in the presence of heparin and endothelial-cell-surface-heparansulfate (ES-HS) 61 (1991) 253

Polarized layer
Limiting flux phenomena in ultrafiltration of kraft black liquor 57 (1991) 187

Polarography
Polarographic method for the determination of the permeability coefficient of polymers towards oxygen dissolved in water 65 (1992) 93

Unequivocal definition and determination of "dissolved gas" permeability and resistances of the liquid layers in contact lens applications 69 (1992) 43

Pollution control
Continuous vapor–gas separation with a porous membrane permeation system 59 (1991) 53

Poly(2,6-dimethyl-1,4-phenylene ether) membranes
The formation of asymmetric hollow fibre membranes for gas separation, using PPE of different intrinsic viscosities 64 (1991) 121

Poly(2,6-dimethyl-1,4-phenylene oxide)
The resistance towards gas transport of the sublayer of asymmetric PPO hollow fiber membranes determined by plasma-etching 57 (1991) 307

Poly(2,6-dimethyl-, 1,4-phenylene oxide) membranes
Characterization of anisotropic UF-membranes: top layer thickness and pore structure 61 (1991) 73

Poly(4-methyl-1-pentene)
Surface fluorination of composite membranes. Part 1. Transport properties 55 (1991) 131

Surface fluorination of composite membranes. Part II. Characterization of the fluorinated layer 55 (1991) 149

Poly(4-methyl-1-pentene) membranes
Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Poly(4-vinylpyridine) membranes
Transport of phenol from aqueous solution to organic solvent through a microporous membrane made of cross-linked poly(4-vinylpyridine) 62 (1991) 219

Polyacrylonitrile membranes
Analysis of some cases of pseudo-azeotropes in pervaporation 55 (1991) 1

Polyacrylonitrite membranes
Preparation of polyacrylonitrile ultrafiltration membranes from polymer solutions containing glycerol 64 (1991) 183

Polyamide/polyethersulfone composite membranes
Membrane separation processes for the clean production of xanthates 62 (1991) 103

Polyamide/polysulfone membranes
The kinetics of the formation of a deposited layer during the reverse osmosis of skim milk 54 (1990) 13

Effects of salt ions and deposit formation on the permeation of organic molecules in complex media in reverse osmosis 54 (1990) 339

Polyamide capsules
pH-responsive permeability of polyamide capsule membrane coated with lipid molecules and amphiphilic polypeptides 58 (1991) 1

Polyamide hollow fiber membranes
Theoretical and experimental analysis of a hybrid bioartificial membrane pancreas: A distributed parameter model taking into account Starling fluxes 52 (1990) 351

Polyamide membranes
Study of solute rejection models for thin film composite polyamide RO membranes 52 (1990) 19

Separation of ternary salt/acid aqueous solutions using hollow fiber reverse osmosis 54 (1990) 175

Polyamide microcapsules
Size distribution and zeta-potential of polyamide microcapsules 72 (1992) 163

Polyaramide hollow fibers
Polyaramide hollow fibers for hydrogen/methane separation - Spinning and properties 53 (1990) 259

Polyarylether ketone
Gas permeation behavior of phenolphthalein based heat-resistant polymers PEK-C and PES-C 53 (1990) 203

Polyarylether sulfone
Gas permeation behavior of phenolphthalein based heat-resistant polymers PEK-C and PES-C 53 (1990) 203

Poly(bisphenol A phthalate), halogenation of
The effects of aryl-halogenation on the gas permeabilities of poly(phenolphthalein terephthalate) and poly(bisphenol A phthalate) 59 (1991) 293

Poly(butadien–styrene)
Analysis of gas permeation through composite membranes 61 (1991) 1

Polycarbonate
Characterization of CO_2-induced conditioning of substi-

tuted polycarbonates using various "exchange" penetrants 51 (1990) 233

Polycarbonate, conditioning
Characterization of CO_2-induced conditioning of substituted polycarbonates using various "exchange" penetrants 51 (1990) 233

Polycarbonate membranes
Approximate solutions for permeabilities of a binary gas mixture via conventional and modified dual-mode models 52 (1990) 221

Porous polycarbonate phase-inversion membranes 60 (1991) 25

Poly(chloroprene)
Permeation of chloromethanes in copolymers of chloroprene with methyl methacrylate and methacrylic acid 55 (1991) 239

Polychlorotrifluoroethylene membranes
Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Polycondensation
Encapsulation by interfacial polycondensation. I. The capsule production and a model for wall growth 65 (1992) 59

Poly(dimethylsiloxane)
Analysis of gas permeation through composite membranes 61 (1991) 1

Vapour sorption and permeation properties of poly(dimethylsiloxane) films 61 (1991) 85

Removal of trace organics from aqueous solutions. Effect of membrane thickness 61 (1991) 99

The diffusion mechanism in silicone rubber 73 (1992) 55

Polydimethylsiloxane/polyethersulfone membranes
Wheatstone bridge model for the laminated polydimethylsiloxane/polyethersulfone membrane for gas separation 64 (1991) 263

Polydimethylsiloxane membranes
Pervaporation of isomeric butanols 54 (1990) 1

Molecular sieving effect of the zeolite-filled silicone rubber membranes in gas permeation 57 (1991) 289

A study on pervaporation of aqueous benzyl alcohol solution by polydimethylsiloxane membrane 70 (1992) 249

Polydispersity
A comprehensive model for cross-flow filtration incorporating polydispersity of the influent 65 (1992) 173

Polyether block amide membranes
Pervaporation of isomeric butanols 54 (1990) 1

Polyether-block-polyamide membranes
Pervaporation of low volatility aromatics from water 53 (1990) 143

Polyether–polyurethane membranes
Interactions of polyether–polyurethanes with water vapour and water–methane separation selectivity 64 (1991) 229

Polyethersulfone
Preparation of asymmetric gas separation membranes with high selectivity by a dual-bath coagulation method 70 (1992) 17

Polyethersulfone/polydimethylsiloxane composite membranes
Influence of composite membrane structure on pervaporation 61 (1991) 19

Polyethersulfone/polyphenylsulfone membranes
Polyethersulfone and polyphenylsulfone hollow fiber trilayer membranes spun from Lewis acid:base complexes – Structure determination by SEM, DSC, and oxygen plasma ablation 54 (1990) 29

Polyethersulfone membranes
Separation of proteins from polyelectrolyes by ultrafiltration 55 (1991) 181

Phase separation in polysulfone/solvent/water and polyethersulfone/solvent/water systems 59 (1991) 219

Analysis of gas permeation through composite membranes 61 (1991) 1

Modified polyethersulfone membranes 62 (1991) 201

Polyethylene membranes
Preparation conditions affecting the permeability of polyethylene microfiltration membranes 52 (1990) 109

Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Water flux and protein adsorption of a hollow fiber modified with hydroxyl groups 56 (1991) 289

Pervaporation of aromatic C_8-isomers 57 (1991) 257

Metal collection using chelating hollow fiber membrane 58 (1991) 221

Poly(ethylene terephthalate) membranes
Controllable changes in the porous structure of polymeric nuclear track membranes 55 (1991) 299

Investigation of efficiency of gas separation on nuclear track membranes with ultra-small pores 55 (1991) 311

Non-equilibrium microstructural and transport characteristics of glassy poly(ethylene terephthalate) 60 (1991) 41

The deformation mechanisms of the porous structure of a poly(ethylene terephthalate) nuclear track membrane 64 (1991) 237

Poly(hydroxybutyrate)
Characterization of plasma-treated poly(hydroxybutyrate) membrane surfaces by ESCA and contact angle measurements 73 (1992) 163

Polyimide
Dependence of permeability through polyimide membranes on state of gas, vapor, liquid and supercritical fluid at high temperature 67 (1992) 29

Vapor permeation and pervaporation separation of water–ethanol mixtures through polyimide membranes 68 (1992) 53

Separation of supercritical CO_2 and ethanol mixtures with an asymmetric polyimide membrane 74 (1992) 131

Polyimide membranes
Preparation and properties of polyimide ultrafiltration membranes 60 (1991) 63

Separation of propylene and propane by polyimide hollow-fiber membrane module 73 (1992) 37

Polymer blends
Ultrafiltation membranes from PVDF/PMMA blends 73 (1992) 25

Polymer–gas interactions
Some fundamental approaches to membrane gas permeability and permselectivity 53 (1990) 229

Polymeric membranes
Characterization of membrane skin defects by gas permeation method 73 (1992) 47

Polymerization–pyrolysis
Preparation and characterization of silicon based inorganic membrane for gas separation 59 (1991) 331

Polymer matrix
Modelling of the diffusion of carbon dioxide in polyimide matrices by computer simulation 73 (1992) 247

Polymer precipitation curves
Phase separation in polysulfone/solvent/water and polyethersulfone/solvent/water systems 59 (1991) 219

Polymer structure design
Polyurethane structure design for pervaporation membranes 61 (1991) 65

Poly(methacrylate) membrane intermediates
Synthesis of reactive composite membranes from Celgard 2400 and methacrylate monomers 67 (1992) 289

Poly(methacrylic acid) membranes
Variable permeability membranes: Network structure of poly(methacrylic acid) and its relation to diffusive transport 58 (1991) 153

Poly(methylacrylate) membranes
Permselectivity of ionic solutes across charged dialysis membranes: *In vitro* and *in vivo* diffusive mass transfer 52 (1990) 191

Poly(methyl methacrylate) membranes
Poly(methyl methacrylate)/(DMF/metal salt) complex membrane for gas separation 74 (1992) 71

Poly(n-isopropylacrylamide-co-butylmethacrylate 95:5mol%) membranes
Molecular separation by thermosensitive hydrogel membranes 64 (1991) 283

Polyoctenamer
Removal of trace organics from aqueous solutions. Effect of membrane thickness 61 (1991) 99

Polyorganosiloxane membranes
The permselectivity of polyorganosiloxanes containing ester functionalities 56 (1991) 217

Poly(ortho ester) films
Water permeability in poly(ortho ester)s 65 (1992) 269

Poly(phenolphthalein terephthalate), halogenation of
The effects of aryl-halogenation on the gas permeabilities of poly(phenolphthalein terephthalate) and poly(bisphenol A phthalate) 59 (1991) 293

Polyphenylene oxide
Novel polymeric membranes for separation of hydrocarbons 66 (1992) 1

Aryl-nitration of poly(phenylene oxide) and polysulfone. Structural characterization and gas permeability 72 (1992) 91

Poly(phenylene oxide) membranes
A new evaluation of membrane processes for the oxygen-enrichment of air. I. Identification of optimum operating conditions and process configuration 62 (1991) 13

A new evaluation of membrane processes for the oxygen-enrichment of air. II. Effects of economic parameters and membrane properties 62 (1991) 37

Polypropylene
Microporous membrane formation via thermally-induced phase separation. VI. Effect of diluent morphology and relative crystallization kinetics on polypropylene membrane structure 64 (1991) 55

Polypropylene membranes
Ammonia removal from water using microporous hollow fibers 51 (1990) 127

Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Polypropylene membranes, surface modified
A one-side hydrophilic polypropylene membrane prepared by plasma treatment 53 (1990) 275

Polypyrrole
Preparation of redox cell properties of cation exchange membrane combined anisotropically with polypyrrole 66 (1992) 289

Polypyrrolone
Transport characterization of a polypyrrolone for gas separations 55 (1991) 99

Polysilastyrene
A method for the determination of the pore size distribution of molecular sieve materials and its application to the characterization of partially pyrolyzed polysilastyrene/porous glass composite membranes 57 (1991) 237

Poly(silicon olefins)
Novel poly(silicon olefins) for gas separations 52 (1990) 289

Poly(sodium acrylate)-poly(divinylbenzene)
Composite membranes prepared by concentrated emulsion polymerization and their use for pervaporation separation of water–acetic acid mixtures 66 (1992) 205

Polystyrene–divinyl benzene membranes
Binary and ternary interdiffusion of counter ions across cation exchange membrane 52 (1990) 143

Poly(styrene sulfonic acid)
Transport of nuclear acid bases through cation exchange membranes from poly(styrenesulfonic acid) and poly(vinyl alcohol) 61 (1991) 227

Polysulfone
Influence of quench medium on the structures and gas permeation properties of polysulfone membranes made by wet and dry/wet phase inversion 71 (1992) 81

Selectivity and characteristics of direct contact membrane distillation type experiment. I. Permeability and selectivity through dried hydrophobic fine porous membranes 72 (1992) 53

Aryl-nitration of poly(phenylene oxide) and polysulfone. Structural characterization and gas permeability 72 (1992) 91

Polysulfone derivatives
Polysulfone-based interpolymer anion exchange membrane 53 (1990) 37

Polysulfone membranes
Determination of surface dense layer structure parameters of the asymmetric membrane by gas permeation method 52 (1990) 97

Approximate solutions for permeabilities of a binary gas mixture via conventional and modified dual-mode models 52 (1990) 221

Porogen derived membranes. 1. Concept description and analysis 54 (1990) 271

A contribution to the translation of retention curves into pore size distribution for sieving membranes 54 (1990) 321

Effects of protein fouling on the apparent pore size distribution of sieving membranes 56 (1991) 13

The influence of nonionic and ionic surfactants on hydrophobic and hydrophilic ultrafiltration membranes 56 (1991) 49

Surface fluorination of polysulfone asymmetric membranes and films 56 (1991) 77

Separation of proteins by surface modified polysulfone membranes 57 (1991) 175

Concentration polarisation build-up in hollow fibers: a method of measurement and its modelling in ultrafiltration 59 (1991) 81

Phase separation in polysulfone/solvent/water and polyethersulfone/solvent/water systems 59 (1991) 219

Activity of alkaline phosphatase bound to polysulfone membranes 60 (1991) 75

Modification of polysulfone ultrafiltration membranes with UV irradiation and hydrophilicity increasing agents 60 (1991) 275

Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

The fine-structure of ultrafiltration membranes. I. Clean membranes 62 (1991) 75

The fine-structure of ultrafiltration membranes. II. Protein fouled membranes 62 (1991) 87

Using micelles to determine the pore size of UF membranes 74 (1992) 279

Polysulfone membranes, modification of
Modification of polysulfone ultrafiltration membranes with UV irradiation and hydrophilicity increasing agents 60 (1991) 275

Polytetrafluoroethylene membranes
Effect of anionic surfactant on copper extraction with N-8-quinolyl-*p*-dodecylbenzenesulfonamide in a hollow fiber membrane extractor 53 (1990) 287

Non-isothermal water transport through membranes 56 (1991) 181

$^{16}O/^{18}O$ and H/D separation factors for liquid/vapor permeation of water through an hydrophobic membrane 60 (1991) 319

Poly(trifluoromethyl substituted arylacetylene)
Improvement of oxygen permselectivity through polydimethylsiloxane and poly(1-trimethylsilylpropyne) films by the addition of a small amount of poly(trifluoromethyl substituted arylacetylene) 57 (1991) 207

Poly(trimethylsilylpropyne) membranes
Gas and vapor permeation and sorption in poly(trimethylsilylpropyne) 60 (1991) 13

Polyurea/polyurethane surface film
Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

Polyurea–polyurethane membranes
Polyurethane structure design for pervaporation membranes 61 (1991) 65

Polyurethane membranes
Pervaporation of isomeric butanols 54 (1990) 1

Polyurethane–polystyrene membranes
Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. I. Effect of synthesis temperature and molecular structure variation 60 (1991) 233

Poly(vinyl alcohol)
Transport of nuclear acid bases through cation exchange membranes from poly(styrenesulfonic acid) and poly(vinyl alcohol) 61 (1991) 227

Preparation and properties of vinyl acetate-grafted Nylon 6 membrane by using homografting method 66 (1992) 169

Poly(vinyl alcohol)/polyacrylonitrile composite membranes
Membrane separation processes for the clean production of xanthates 62 (1991) 103

Poly(vinyl alcohol) membranes
Pervaporation of liquid mixtures through poly(vinyl alcohol) (PVA) membranes. I. Study of water containing binary systems with complete and partial miscibility 51 (1990) 169

Pervaporation of liquid mixtures through poly(vinyl alcohol) (PVA) membranes. II. The binary systems methanol/1-propanol and methanol/dioxane and the ternary system water/methanol/1-propanol 51 (1990) 181

Pervaporation of water–ethanol mixtures through crosslinked and surface-modified poly(vinyl alcohol) membrane 51 (1990) 215

Pervaporation separation of aqueous mixtures using crosslinked poly(vinyl alcohol) (PVA). II. Permeation of ethanol–water mixtures 51 (1990) 273

Analysis of some cases of pseudo-azeotropes in pervaporation 55 (1991) 1

Pervaporation separation of aqueous mixtures using crosslinked polyvinyl alcohol membranes. III. Permeation of acetic acid–water mixtures 58 (1991) 33

Electrical conductivity of cationic poly(vinyl alcohol) membranes having quaternary ammonium groups 64 (1991) 247

Modelling of the pervaporation separation of ethanol–water mixtures through crosslinked poly(vinyl alcohol) membrane 67 (1992) 39

Poly(vinyl alcohol) membranes, crosslinked
Development of crosslinked poly(vinyl alcohol) (type II) and permeation of acetic acid–water mixtures 62 (1991) 59

Poly(vinyl alcohol), surface modified
Pervaporation of water–ethanol mixtures through crosslinked and surface-modified poly(vinyl alcohol) membrane 51 (1990) 215

Poly(vinyl chloride) membranes
The influence of molecular mass of poly(vinyl chloride) on the structure and transport characteristics of ultrafiltration membranes 61 (1991) 131

Polyvinylidene fluoride
The surface structure and morphology of polyvinylidene fluoride microfiltration membranes by atomic force microscopy 68 (1992) 65

Selectivity and characteristics of direct contact membrane distillation type experiment. I. Permeability and selectivity through dried hydrophobic fine porous membranes 72 (1992) 53

Selectivity and characteristics of direct contact membrane distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

Poly(vinylidene fluoride) membranes
Preparation of temperature-sensitive membranes by graft polymerization onto a porous membrane 55 (1991) 119

The influence of nonionic and ionic surfactants on hydro-

phobic and hydrophilic ultrafiltration membranes 56 (1991) 49

Non-isothermal water transport through membranes 56 (1991) 181

The formation of microporous polyvinylidene difluoride membranes by phase separation 57 (1991) 1

Poly(vinylidene) membranes
Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Polyvinyltrimethyl silane
Applicability conditions of idealized flow models for gas separation by asymmetric membrane 55 (1991) 333

Characterization of membrane skin defects by gas permeation method 73 (1992) 47

Polyvinyltrimethylsilane membranes
Separation of gas mixtures in unsteady-state conditions 55 (1991) 283

Oscillatory mode of the operation of an asymmetric poly(vinyltrimethylsilane)membrane 60 (1991) 1

Gas and vapor permeation and sorption in poly(trimethylsilylpropyne) 60 (1991) 13

Pore diameter
Bubble point measurements on large areas of microporous membranes 60 (1991) 253

Pore flow mechanism
Predictability of transport equations for pervaporation on the basis of pore-flow mechanism 70 (1992) 163

Pore flow model
A study on the pervaporation of ethanol/water mixtures on the basis of pore flow model 59 (1991) 151

Mass transfer in ultrafiltration 61 (1991) 49

Pore level
Hydrodynamic aspects of crossflow microfiltration. Analysis of particle deposition at the membrane surface 71 (1992) 29

Pore model
Ionic equilibria in ion-exchange membranes: a comparison of pore model predictions with experimental results 67 (1992) 211

Interpretation of transport coefficients in Nafion using a parallel pore model 67 (1992) 227

Pore size
Determination of surface dense layer structure parameters of the asymmetric membrane by gas permeation method 52 (1990) 97

Characterization of anisotropic UF-membranes: top layer thickness and pore structure 61 (1991) 73

A study of pore size distribution and mean pore size on unsupported gamma-alumina membranes prepared by modifications introduced in the alkoxide hydrolysis step 69 (1992) 21

Pore size, determination of
Membrane pore characterization – comparison between single and multicomponent solute probe techniques 57 (1991) 271

Pore size distribution
A contribution to the translation of retention curves into pore size distribution for sieving membranes 54 (1990) 321

Effects of protein fouling on the apparent pore size distribution of sieving membranes 56 (1991) 13

A method for the determination of the pore size distribution of molecular sieve materials and its application to the characterization of partially pyrolyzed polysilastyrene/porous glass composite membranes 57 (1991) 237

Chitosan membrane with covalently immobilized urease. Pore size distribution 61 (1991) 279

Permporometry. The determination of the size distribution of active pores in UF membranes 71 (1992) 57

A statistic model of pore size distributions in membranes 72 (1992) 13

Pore sizing
Using micelles to determine the pore size of UF membranes 74 (1992) 279

Pore structure
Protein fouling of UF membranes: Causes and consequences 52 (1990) 121

Pore theory
Ultrafiltration properties of hydrogel analogues of basement membrane: A comparison of the pore theory and the fibre–matrix hypothesis 51 (1990) 141

Ultrafiltration through hydrogels: Effects of hydration and crosslinking 52 (1990) 1

Pore wall charge
On the introduction of the pore wall charge in the space-charge model for microporous membranes 51 (1990) 161

Porogen
Porogen derived membranes. 1. Concept description and analysis 54 (1990) 271

Porosity
Determination of surface dense layer structure parameters of the asymmetric membrane by gas permeation method 52 (1990) 97

Characterization of anisotropic UF-membranes: top layer thickness and pore structure 61 (1991) 73

Characterisation of ultrafiltration membranes by impedance spectroscopy. I. Determination of the separate electrical parameters and porosity of the skin and sublayers 66 (1992) 19

Porous glass membranes
Preparation of water and alkali durable porous glass membrane coated on porous alumina tubing by sol–gel method 60 (1991) 307

Porous membranes
Non-isothermal water transport through membranes 56 (1991) 181

Formaldehyde production from methanol using a porous Vycor glass membrane reactor 57 (1991) 95

Porous membrane of *Bombyx mori* silk fibroin: structure characterization, physical properties and application to glucose oxidase immobilization 59 (1991) 39

Continuous vapor–gas separation with a porous membrane permeation system 59 (1991) 53

First investigations on the use of scanning tunnelling microscopy (STM) for the characterisation of porous membranes 67 (1992) 295

Porous mica membranes
Scanning electrochemical microscopy of a porous membrane 58 (1991) 71

Porous support
Sorption isotherms of alcohols in zeolite-filled silicone rubber and in PVA-composite membranes 70 (1992) 75

Potassium chloride transport
Charge mosaic composite membranes constructed by phase growth 54 (1990) 75

Potassium ion
Effects of alkali metal cation on myoblast membrane electrical properties during *in vitro* myogenic fusion 65 (1992) 7

Potential fluctuations
Fluctuations of biomimetic membranes potential and membrane lysis, induced by surface-active glycine esters 66 (1992) 143

Pressure drop effects
Models and analyses of membrane gas permeators 73 (1992) 1

Pressure retarded osmosis
An analytical solution of the steady state convective-diffusion equation with space dependent diffusion coefficient 71 (1992) 51

Prigogine's theorem
Non-equilibrium thermodynamics as applied to membrane transport 57 (1991) 119

Process design
Scale-up of membrane systems from lab data 62 (1991) 309

Extraction of organics from aqueous solutions by pervaporation. A novel method for membrane characterization and process design in ethyl acetate separation 66 (1992) 193

Process optimization
A new evaluation of membrane processes for the oxygen-enrichment of air. I. Identification of optimum operating conditions and process configuration 62 (1991) 13

A new evaluation of membrane processes for the oxygen-enrichment of air. II. Effects of economic parameters and membrane properties 62 (1991) 37

Propionibacterium acid-propionici
Ultrafiltration membrane cell recycle for continuous culture of *Propionibacterium* 61 (1991) 303

Propionic acid
Ultrafiltration membrane cell recycle for continuous culture of *Propionibacterium* 61 (1991) 303

Propylene separation
Separation of propylene and propane by polyimide hollow-fiber membrane module 73 (1992) 37

Prostaglandins
Transport through liquid membranes generated by lecithin, cholesterol and lecithin–cholesterol mixtures in the presence of prostaglandins 58 (1991) 211

Protein adsorption
Permeability and protein adsorption of modified charged acrylonitrile copolymer membranes 67 (1992) 283

Proteinase, thermostable
Laboratory-scale investigations into the use of extremely thermophilic proteinases for cleaning ultrafiltration membranes fouled during whey processing 67 (1992) 93

Protein concentration
Protein type effects on steady-state crossflow membrane ultrafiltration fluxes and protein transmission 70 (1992) 177

Protein hydrolysates, separation of
Ultrafiltration concentration of enzyme hydrolysates 68 (1992) 195

Protein recovery
Properties of microfiltration membranes. Part II. Adsorption of bovine serum albumin at aluminium oxide membranes 51 (1990) 189

Protein separations
Separation of proteins from polyelectrolyes by ultrafiltration 55 (1991) 181

Separation of proteins by surface modified polysulfone membranes 57 (1991) 175

Transport and separation of proteins by ultrafiltration through sorptive snd non-sorptive membranes 69 (1992) 189

Proteins, ultrafiltration of
Concentration polarisation build-up in hollow fibers: a method of measurement and its modelling in ultrafiltration 59 (1991) 81

Modification of polysulfone ultrafiltration membranes with UV irradiation and hydrophilicity increasing agents 60 (1991) 275

Pseudo-azeotropy
Analysis of some cases of pseudo-azeotropes in pervaporation 55 (1991) 1

Pulsating flow
Permeate flux enhancement by pressure and flow pulsations in microfiltration with mineral membranes 70 (1992) 257

Pure water flux
Water/acetone permeability of porous hollow-fiber membrane containing diethylamino groups on the grafted polymer branches 71 (1992) 1

Q

Quaternary ammonium ions
Mechanisms of facilitation and blocking in gramicidin channels by impermeant ions 66 (1992) 157

Quench medium
Influence of quench medium on the structures and gas permeation properties of polysulfone membranes made by wet and dry/wet phase inversion 71 (1992) 81

Quinaldate derivative
Selective transport of lithium ions by an acyclic carboxylic ionophore with a quinaldate moiety through a bulk liquid membrane 57 (1991) 297

R

Radial diffusion
Dynamics of washing-out dialyzers with hollow-fiber membranes 58 (1991) 201

Radiation grafting polymerization
Surface-modified hydrophilic membranes in membrane distillation 72 (1992) 189

Radiation synthesis
Radiation synthesis of ion-exchange carboxylic fluorine containing membranes 68 (1992) 133

Radiochemical grafting
Preparation of perfluorinated ion exchange membranes and their application in acid recovery 67 (1992) 263

Radiopharmaceuticals
Activity of alkaline phosphatase bound to polysulfone membranes 60 (1991) 75

Radiotracer technique
Transport properties of anion exchange membranes in contact with hydrochloric acid solutions. Membranes for acid recovery by electrodialysis 57 (1991) 57

Rare earth metals
Separation of yttrium in a hollow fiber membrane 74 (1992) 215

Reaction–diffusion system
Effect of enzyme concentration on the dynamic behavior of a membrane-bound enzyme system 70 (1992) 237

Kinetics of membrane-bound enzymes: Validity of quasi-steady-state approximation for a Michaelis–Menten-type reaction 74 (1992) 159

Recycle system
The use of recycle permeator systems for gas mixture separation 67 (1992) 15

Redox cell
Preparation of redox cell properties of cation exchange membrane combined anisotropically with polypyrrole 66 (1992) 289

Redox flow battery
Electrical resistivities and permeabilities of composite membranes based on a cation exchange membrane for a redox flow battery 51 (1990) 201

Redox flow cell and battery
Modification of Daramic, microporous separator, for redox flow battery applications 75 (1992) 81

Reflection coefficient
Effect of membrane structure and protein concentration on the osmotic reflection coefficient 72 (1992) 277

Regenerated cellulose
Behavioral analysis of air perstripping 67 (1992) 1

Regenerated cellulose membranes
Regenerated cellulose membrane from cuoxam/zincoxene blend 56 (1991) 207

Rejection coefficient
The energy of an ion in a cylindrical pore of a low dielectric membrane 52 (1990) 89

Relaxation
Relaxation of polymer chains dissolved in the liquid phase of membranes. I. Electroosmosis with oxidized collodion and collodion–poly(acrylic acid) membranes 58 (1991) 59

Release kinetics from hydrogels
Release kinetics of pendant substituted bioactive molecules from swellable hydrogels: role of chemical reaction and diffusive transport 51 (1990) 83

Resistance permeation model
Determination of surface dense layer structure parameters of the asymmetric membrane by gas permeation method 52 (1990) 97

Response characteristics
Effect of enzyme concentration on the dynamic behavior of a membrane-bound enzyme system 70 (1992) 237

Reversed micelles
New applications of crown ethers. 12. "Double-cycle" transport mechanism for crown ether/2,6-di(*t*-butyl)-4-nitrophenol/alkylammonium salt system. Effect of reversed-micelle like aggregate of alkylammonium salts on cation transport through a liquid membrane 69 (1992) 75

Metal-ion uptake and release by reversed micelles: comparison of liquid membranes with direct liquid–liquid contact and with interfacial semipermeable membranes 72 (1992) 181

Reverse osmosis
Study of solute rejection models for thin film composite polyamide RO membranes 52 (1990) 19

The kinetics of the formation of a deposited layer during the reverse osmosis of skim milk 54 (1990) 13

Effects of salt ions and deposit formation on the permeation of organic molecules in complex media in reverse osmosis 54 (1990) 339

Evaluation of process models for fouling control of reverse osmosis of cheese whey 58 (1991) 89

A study on the pervaporation of ethanol/water mixtures on the basis of pore flow model 59 (1991) 151

Reverse osmosis cellulose acetate membranes. I. Rate of hydrolysis 59 (1991) 305

Reverse osmosis cellulose acetate membranes. II. Dependence of transport properties on acetyl content 59 (1991) 317

Preparation of water and alkali durable porous glass membrane coated on porous alumina tubing by sol–gel method 60 (1991) 307

Membrane separation processes for the clean production of xanthates 62 (1991) 103

Teaching the engineering aspects of membrane process technology 62 (1991) 239

Scale-up of membrane systems from lab data 62 (1991) 309

Characterization of reverse osmosis cellulose acetate membranes by gas adsorption method: effect of casting variables and chlorine damage 62 (1991) 325

Synergistic, membrane-based hybrid separation systems 62 (1991) 347

Dynamic optimization of a one-stage reverse-osmosis installation with respect to membrane fouling 65 (1992) 277

Non-linear flow through compressible membranes and its relation to osmotic pressure 66 (1992) 37

Enhancement of membrane performance with employment of cellulose acetate blend 66 (1992) 79

Reverse osmosis of whey. Determination of mass transfer coefficients 68 (1992) 301

Determination of some transport coefficients for the skin and porous layer of a composite membrane 69 (1992) 29

Bipolar reverse osmosis membrane for separating mono- and divalent ions 70 (1992) 153

Preliminary investigation of thin film composite reverse

osmosis membranes developed from SAN as support membranes 71 (1992) 201

Reverse osmosis treatment of multicomponent electrolyte solutions 72 (1992) 211

The effects of molecular width on permeation of organic solute through cellulose acetate reverse osmosis membranes 74 (1992) 95

Reverse osmosis membranes
Preparation and properties of vinyl acetate-grafted Nylon 6 membrane by using homografting method 66 (1992) 169

Reversible reaction model
Multisolute extraction of organic acids by liquid membranes. I. Batch experiments and models 53 (1990) 71

Review
Statistical–mechanical theory of membrane transport 51 (1990) 1

Models and analyses of membrane gas permeators 73 (1992) 1

Diffusional phenomena in membrane separation processes 73 (1992) 103

Rigid gas permeability
Unequivocal definition and determination of "dissolved gas" permeability and resistances of the liquid layers in contact lens applications 69 (1992) 43

Rinse waters
Recovery by electrodialysis of cyanide electroplating rinse waters 68 (1992) 283

Rotating diffusion cell
Mass transfer in Nafion membrane systems: Effects of ionic size and charge on selectivity 58 (1991) 175

Rotating membranes
Dynamic microfiltration of dilute slurries with a rotating ceramic membrane 62 (1991) 187

S

Salt rejection
Electrochemical properties of asymmetric cellulose acetate membranes 52 (1990) 57

Turbulence promoter geometry: its influence on salt rejection and pressure losses of a composite-membrane spiral wound module 75 (1992) 205

Scale formation
Ion exchange membranes with preferential permselectivity for monovalent ions 54 (1990) 233

Scanning electrochemical microscopy
Scanning electrochemical microscopy of a porous membrane 58 (1991) 71

Scanning electron microscopy
Polyethersulfone and polyphenylsulfone hollow fiber trilayer membranes spun from Lewis acid:base complexes – Structure determination by SEM, DSC, and oxygen plasma ablation 54 (1990) 29

Thin and composite high-flux membranes of perfluorosulfonated ion-exchange polymer 54 (1990) 51

Quantitative microscopic study of surface characteristics of ultrafiltration membranes 54 (1990) 89

The formation of microporous polyvinylidene difluoride membranes by phase separation 57 (1991) 1

Microporous membrane formation via thermally-induced phase separation. VI. Effect of diluent morphology and relative crystallization kinetics on polypropylene membrane structure 64 (1991) 55

Scanning tunnelling microscopy
First investigations on the use of scanning tunnelling microscopy (STM) for the characterisation of porous membranes 67 (1992) 295

Scintillation proximity assay
Scintillation proximity assay for measuring benzene absorption in a polyethylene membrane 69 (1992) 179

Sea water
Ion exchange membranes with preferential permselectivity for monovalent ions 54 (1990) 233

Selective dissolution
Relationship between permselectivity and permeability in pervaporation of water/alcohol mixture 65 (1992) 51

Selective transport
Transport of electrolytes through charge mosaic composite membranes 65 (1992) 129

Selectivity
Use of a membrane reactor to improve selectivity to intermediate products in consecutive catalytic reactions 70 (1992) 129

Selectivity and characteristics of direct contact membrane

distillation type experiment. II. Membrane treatment and selectivity increase 72 (1992) 73

On the nitrate and monovalent cation selectivity of ion exchange membranes used in drinking water purification 75 (1992) 265

Selemion membranes
Transport properties of anion exchange membranes in contact with hydrochloric acid solutions. Membranes for acid recovery by electrodialysis 57 (1991) 57

Semicrystalline membranes
Barriers to flow in semicrystalline ionomers. A procedure for preparing melt-processed perfluorosulfonate ionomer films and membranes 75 (1992) 7

Sensors
A one-side hydrophilic polypropylene membrane prepared by plasma treatment 53 (1990) 275

Modelling of the behaviour of microporous membrane sensors used in the detection of volatile organic solutes in aqueous media 59 (1991) 249

Separation characteristics
Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. I. Binary alcohol–water systems 68 (1992) 119

Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. II. The binary systems ammonia–water, methylamine–water, 1-propanol–methanol and the ternary system 1-propanol–methanol–water 68 (1992) 127

Separation factor
Correlation of separation factor versus permeability for polymeric membranes 62 (1991) 165

The separation of water and ethanol by pervaporation with PVA–PAN composite membranes 68 (1992) 141

The characteristics of a PAA–PSf composite membrane for separation of water–ethanol mixtures through pervaporation 72 (1992) 259

Separation of acetic acid/water
Development of crosslinked poly(vinyl alcohol) (type II) and permeation of acetic acid–water mixtures 62 (1991) 59

Separation of acetone/nitrogen
Continuous vapor–gas separation with a porous membrane permeation system 59 (1991) 53

Separation of alcohol/water
Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. I. Binary alcohol–water systems 68 (1992) 119

Separation of amino acids
Water transport mechanisms in liquid emulsion membrane process for the separation of amino acids 51 (1990) 309

Separation of ammonia from nitrogen and hydrogen
Molten salt facilitated transport membranes. Part 2. Separation of ammonia from nitrogen and hydrogen at high temperatures 65 (1992) 31

Separation of amyl alcohol/water
Membrane separation processes for the clean production of xanthates 62 (1991) 103

Separation of azeotropic mixtures
Methods to improve flux during alcohol/water azeotrope separation by vapor permeation 68 (1992) 229

Separation of carbon dioxide/methane
Approximate solutions for permeabilities of a binary gas mixture via conventional and modified dual-mode models 52 (1990) 221

Separation of ethanol/CO_2
Separation of supercritical CO_2 and ethanol mixtures with an asymmetric polyimide membrane 74 (1992) 131

Separation of ethanol/nitrogen
Continuous vapor–gas separation with a porous membrane permeation system 59 (1991) 53

Separation of ethanol/water
Cationic/anionic interpenetrating polymer network membranes for the pervaporation of ethanol–water mixture 52 (1990) 157

A study on the pervaporation of ethanol/water mixtures on the basis of pore flow model 59 (1991) 151

Modelling of the pervaporation separation of ethanol–water mixtures through crosslinked poly(vinyl alcohol) membrane 67 (1992) 39

The separation of water and ethanol by pervaporation with PVA–PAN composite membranes 68 (1992) 141

Prediction of pervaporation separation characteristics for the ethanol–water–nylon-4 membrane system 70 (1992) 105

Separation of ethyl acetate/water
Extraction of organics from aqueous solutions by pervaporation. A novel method for membrane characterization and process design in ethyl acetate separation 66 (1992) 193

Separation of ethyl alcohol/heptane
A new transport model for pervaporation 59 (1991) 133

Separation of ethyl alcohol/water

Polyurethane structure design for pervaporation membranes 61 (1991) 65

Separation of gas mixtures
Mathematical modelling of multicomponent membrane permeators 52 (1990) 205

Separation of hydrocarbons
Mass transfer studies in liquid membrane hydrocarbon separations 54 (1990) 119

Separation of hydrogen/methane
Polyaramide hollow fibers for hydrogen/methane separation - Spinning and properties 53 (1990) 259

Separation of hydrogen/methanol
Methanol–hydrogen separation by capillary condensation in inorganic membranes 60 (1991) 185

Separation of immunoglobulins/albumin
Effect of permeate to feed ratio on protein recovery in membrane plasma fractionation 60 (1991) 87

Separation of isopropanol/water
Separation of isopropanol from water by pervaporation using silicone-based membranes 74 (1992) 171

Separation of *m*- and *p*-xylene
The separation of *meta*- and *para*-xylene by pervaporation in the presence of CBr_4, a selective feed-complexing agent 67 (1992) 67

Separation of methanol/1-propanol
Pervaporation of liquid mixtures through poly(vinyl alcohol) (PVA) membranes. II. The binary systems methanol/1-propanol and methanol/dioxane and the ternary system water/methanol/1-propanol 51 (1990) 181

Separation of methanol/dioxane
Pervaporation of liquid mixtures through poly(vinyl alcohol) (PVA) membranes. II. The binary systems methanol/1-propanol and methanol/dioxane and the ternary system water/methanol/1-propanol 51 (1990) 181

Separation of methanol/pentane
Prediction of pervaporation separation characteristics for the methanol–pentane–nylon-6–poly(acrylic acid) blended membrane system 71 (1992) 211

Separation of methanol/water
Methanol and water uptake, densities, equivalent volumes and thicknesses of several uni- and divalent ionic perfluorosulphonate exchange membranes (Nafion-117) and their methanol–water fractionation behaviour at 298 K 71 (1992) 69

Separation of oxygen/argon
Permeation of oxygen, argon and nitrogen through polymer membranes 71 (1992) 13

Separation of oxygen/nitrogen
Gas transport in polyurethane–polystyrene interpenetrating polymer network membranes. I. Effect of synthesis temperature and molecular structure variation 60 (1991) 233

Separation of oxygen from air
Molten salt facilitated transport membranes. Part 1. Separation of oxygen from air at high temperatures 65 (1992) 21

Separation of sodium chloride/acetic acid/water
Separation of ternary salt/acid aqueous solutions using hollow fiber reverse osmosis 54 (1990) 175

Separation of tryptophan/water
Novel membrane separation method using liquid and porous polymeric membranes 69 (1992) 131

Separation of water/acetic acid mixtures
Composite membranes prepared by concentrated emulsion polymerization and their use for pervaporation separation of water–acetic acid mixtures 66 (1992) 205

Separation of water/alcohols
Pervaporation of isomeric butanols 54 (1990) 1

Separation of water/ethanol
Pervaporation of water–ethanol mixtures through crosslinked and surface-modified poly(vinyl alcohol) membrane 51 (1990) 215

Pervaporation separation of aqueous mixtures using crosslinked poly(vinyl alcohol) (PVA). II. Permeation of ethanol–water mixtures 51 (1990) 273

Pervaporation separation of water–ethanol through modified chitosan membranes. IV. Phosphorylated chitosan membranes 64 (1991) 145

Vapor permeation and pervaporation separation of water–ethanol mixtures through polyimide membranes 68 (1992) 53

Computer simulation for the pervaporation process of water/ethanol mixture through interpenetrating polymer network (IPN) membranes 70 (1992) 193

The characteristics of a PAA–PSf composite membrane for separation of water–ethanol mixtures through pervaporation 72 (1992) 259

Separation of water/ethylene glycol monoethyl ether
Mass transfer in radiation-grafted pervaporation membranes 54 (1990) 131

Separation of water/ethylene glycol monomethyl ether
Mass transfer in radiation-grafted pervaporation membranes 54 (1990) 131

Separation of water/isopropanol
Mass transfer in radiation-grafted pervaporation membranes 54 (1990) 131

Separation of water/methane
Interactions of polyether–polyurethanes with water vapour and water–methane separation selectivity 64 (1991) 229

Separation of water/methanol/1-propanol
Pervaporation of liquid mixtures through poly(vinyl alcohol) (PVA) membranes. II. The binary systems methanol/1-propanol and methanol/dioxane and the ternary system water/methanol/1-propanol 51 (1990) 181

Separation of water/organic solvents
Pervaporation of liquid mixtures through poly(vinyl alcohol) (PVA) membranes. I. Study of water containing binary systems with complete and partial miscibility 51 (1990) 169

Separation of water/sodium chloride
Study of solute rejection models for thin film composite polyamide RO membranes 52 (1990) 19

Separation–reaction device
Pharmaceutical product recovery using a hollow fiber contained liquid membrane: A case study 75 (1992) 131

Series catalytic reactions
Use of a membrane reactor to improve selectivity to intermediate products in consecutive catalytic reactions 70 (1992) 129

Sieving membranes
A contribution to the translation of retention curves into pore size distribution for sieving membranes 54 (1990) 321

Silica
Adsorption, permeation, and diffusion of gases in microporous membranes. I. Adsorption of gases on microporous glass membranes 75 (1992) 221

Adsorption, permeation, and diffusion of gases in microporous membranes. II. Permeation of gases in microporous glass membranes 75 (1992) 233

Silica sol
Influence of temperature on the ultrafiltration of silica sol in a stirred cell 66 (1992) 9

Silicium oxide, deposition of
The permeation of gases through a poly(ethylene terephthalate) membrane deposited with SiO_2 59 (1991) 353

Silicon based membranes
Preparation and characterization of silicon based inorganic membrane for gas separation 59 (1991) 331

Silicon containing polymers
Novel poly(silicon olefins) for gas separations 52 (1990) 289

Silicone
Pervaporation of ethanol/water mixtures using novel hydrophobic membranes containing polydimethylsiloxane 75 (1992) 93

Pervaporation of ethanol/water mixtures using novel hydrophobic membranes containing polydimethylsiloxane 75 (1992) 93

Silicone-based membranes
Separation of isopropanol from water by pervaporation using silicone-based membranes 74 (1992) 171

Silicone membranes
A study on the pervaporation of ethanol/water mixtures on the basis of pore flow model 59 (1991) 151

Silicone rubber
The diffusion mechanism in silicone rubber 73 (1992) 55

Silicone rubber membranes
Mathematical modelling of multicomponent membrane permeators 52 (1990) 205

Continuous membrane fermentor separator for ethanol fermentation 57 (1991) 21

A new evaluation of membrane processes for the oxygen-enrichment of air. I. Identification of optimum operating conditions and process configuration 62 (1991) 13

A new evaluation of membrane processes for the oxygen-enrichment of air. II. Effects of economic parameters and membrane properties 62 (1991) 37

Silk fibroin (membrane)
Porous membrane of *Bombyx mori* silk fibroin: structure characterization, physical properties and application to glucose oxidase immobilization 59 (1991) 39

Silver nitrate refining
Silver nitrate refining using supported liquid membranes 54 (1990) 299

Silyl-PPO
Membranes for gas separation based on silylated polyphenylate oxide 55 (1991) 325

Structure and gas permeability of silylated polyphenylene oxide 71 (1992) 97

Size distribution
Size distribution and zeta-potential of polyamide microcapsules 72 (1992) 163

Skim milk
The kinetics of the formation of a deposited layer during

the reverse osmosis of skim milk 54 (1990) 13

Skin
The skin as a barrier membrane: Relating *in vitro* measurements to *in vivo* behavior 52 (1990) 379

Mass transfer dynamics of the evaporation step in membrane formation by phase inversion 64 (1991) 81

A kinetic model for ion transport across skin 71 (1992) 257

Skin defects
Characterization of membrane skin defects by gas permeation method 73 (1992) 47

Skin formation
Skin formation in heterogeneous polymerization reactions 59 (1991) 205

Skin-layers, defect-free
Influence of quench medium on the structures and gas permeation properties of polysulfone membranes made by wet and dry/wet phase inversion 71 (1992) 81

Skin layer thickness
The formation of asymmetric hollow fibre membranes for gas separation, using PPE of different intrinsic viscosities 64 (1991) 121

Skin thickness
Characterization of anisotropic UF-membranes: top layer thickness and pore structure 61 (1991) 73

Sodium chloride permeation
pH-responsive permeability of polyamide capsule membrane coated with lipid molecules and amphiphilic polypeptides 58 (1991) 1

Sodium ion
Effects of alkali metal cation on myoblast membrane electrical properties during *in vitro* myogenic fusion 65 (1992) 7

Sol–gel derived membranes
Preparation of a sol-gel derived thin membrane on a porous ceramic hollow fiber by the filtration technique 59 (1991) 73

Sol–gel method
Preparation of water and alkali durable porous glass membrane coated on porous alumina tubing by sol-gel method 60 (1991) 307

Sol–gel technique
A study of pore size distribution and mean pore size on unsupported gamma-alumina membranes prepared by modifications introduced in the alkoxide hydrolysis step 69 (1992) 21

Solid oxide membrane composites
Oxygen semipermeable solid oxide membrane composites prepared by electrochemical vapor deposition 66 (1992) 211

Solubility and partitioning
Investigation of the separation factor between light and heavy water in the liquid/vapor membrane permeation process 55 (1991) 257

The permselectivity of polyorganosiloxanes containing ester functionalities 56 (1991) 217

The relative contribution of adsorption to the overall sorption and transport of small molecules in amber 60 (1991) 147

Characterization of reverse osmosis cellulose acetate membranes by gas adsorption method: effect of casting variables and chlorine damage 62 (1991) 325

Concentration effects on membrane sieving: development of a stagnant film model incorporating the effects of solute–solute interactions 68 (1992) 183

Scintillation proximity assay for measuring benzene absorption in a polyethylene membrane 69 (1992) 179

Sorption and transport of ethanol and water in poly(ethylene-co-vinyl acetate) membranes 69 (1992) 223

Switchable gate membranes. Conducting polymer films for the selective transport of neutral solution species 70 (1992) 9

Penetrant-plasticized permeation in polymethylmethacrylate 74 (1992) 27

Gas transport and sub-T_g relaxations in umodified and nitrated polyarylethersulfones 74 (1992) 193

Effects of protonation on the transport of hydrophobic nitrogen heterocycles through perfluorosulfonate ionomer membranes 75 (1992) 293

Solubility diffusivity
Novel polymeric membranes for separation of hydrocarbons 66 (1992) 1

Solute interactions
Concentration effects on membrane sieving: development of a stagnant film model incorporating the effects of solute–solute interactions 68 (1992) 183

Solute rejection
Coupling-constant description of coupled flow and diffusion 74 (1992) 253

Solute rejection models
Study of solute rejection models for thin film composite polyamide RO membranes 52 (1990) 19

Solute separation

Molecular separation by thermosensitive hydrogel membranes 64 (1991) 283

Solute transport
Coupling-constant description of coupled flow and diffusion 74 (1992) 253

Solution–diffusion–desorption
Mass transfer in radiation-grafted pervaporation membranes 54 (1990) 131

Solution–diffusion mechanism
Development of rubbery materials with excellent barrier properties to H_2, D_2 and T_2 52 (1990) 263

Solution–diffusion model
A generalized model for the transport of gases in porous, non-porous, and leaky membranes. I. Application to single gases 75 (1992) 245

Solvent–polymer interaction
Variable permeability membranes: Network structure of poly(methacrylic acid) and its relation to diffusive transport 58 (1991) 153

Solvent treatment
Solvent-induced morphological change of microporous hollow fiber membranes 70 (1992) 217

Sorption
Transport competition between proton and cupric ion through a cation-exchange membrane. I. Equilibrium properties of the system: membrane-$CuSO_4 + H_2SO_4$ solution 71 (1992) 181

Sorption and permeation
Vapour sorption and permeation properties of poly(dimethylsiloxane) films 61 (1991) 85

Space-charge model
On the introduction of the pore wall charge in the space-charge model for microporous membranes 51 (1990) 161

Spacer orientation
The pressure drop in membrane module with spacers 64 (1991) 103

Spacers
Optimal channel spacer design for ultrafiltration 62 (1991) 275

Spin coating
Preparation of composite membranes by a spin coating process 74 (1992) 233

Spin-labeling
Structural and enzymatic characterizations of papain immobilized onto vinyl alcohol/vinyl butyral copolymer membrane 66 (1992) 247

Spinning of polyaramide
Polyaramide hollow fibers for hydrogen/methane separation - Spinning and properties 53 (1990) 259

Spiral-wound element
Reverse osmosis treatment of multicomponent electrolyte solutions 72 (1992) 211

Spiral wound modules
Turbulence promoter geometry: its influence on salt rejection and pressure losses of a composite-membrane spiral wound module 75 (1992) 205

Stabilization
Stabilization of the lamellar structure of phosphatidylcholine by complex formation with trehalose 73 (1992) 173

Stirred cell
Influence of temperature on the ultrafiltration of silica sol in a stirred cell 66 (1992) 9

Stratum corneum
The skin as a barrier membrane: Relating *in vitro* measurements to *in vivo* behavior 52 (1990) 379

Streaming potential
Determination of the streaming potential in ion-exchange membranes 67 (1992) 57

Stripping
Behavioral analysis of air perstripping 67 (1992) 1

Structural change
Pervaporation through structurally unstable polymeric membranes 67 (1992) 167

Structural inhomogeneity, influence on transport properties
Membrane transport properties in relation to microscopic and macroscopic structural inhomogeneity 52 (1990) 305

Structure deformation
The deformation mechanisms of the porous structure of a poly(ethylene terephthalate) nuclear track membrane 64 (1991) 237

Structure–property relations
The effects of aryl-halogenation on the gas permeabilities of poly(phenolphthalein terephthalate) and poly(bisphenol A phthalate) 59 (1991) 293

Aryl-nitration of poly(phenylene oxide) and polysulfone. Structural characterization and gas permeability 72 (1992) 91

Substituted phenol
New applications of crown ethers. 11. Structural effect of the counter anion on crown-ether mediated cation extraction and transport. A direct examination of the crown ether-

cation complex in the organic phase of extraction and transport 69 (1992) 61

Substituted polysulfone
Transport and reaction behavior of invertase ultrafiltration membranes made from substituted polysulfone 64 (1991) 173

Sulfonated copolymer polystyrene/polyethylene membranes
Characterization of ion exchange membrane surfaces by means of X-ray photoelectron spectroscopy and SEM 58 (1991) 49

Sulfonated membranes
Binary and ternary interdiffusion of counter ions across cation exchange membrane 52 (1990) 143

Supercritical fluid
Dependence of permeability through polyimide membranes on state of gas, vapor, liquid and supercritical fluid at high temperature 67 (1992) 29

Separation of supercritical CO_2 and ethanol mixtures with an asymmetric polyimide membrane 74 (1992) 131

Supported liquid membranes
Silver nitrate refining using supported liquid membranes 54 (1990) 299

Transport of amino acids and their phosphonic acid analogues through supported liquid membranes containing macrocyclic carriers. Experimental parameters 56 (1991) 167

Synergistic, membrane-based hybrid separation systems 62 (1991) 347

Selective transport of calcium ion from a mixed cation solution through an HDEHP/n-dodecane supported liquid membrane 64 (1991) 69

Nitrate removal using supported liquid membranes: transport mechanism 67 (1992) 107

Supported liquid membranes: instability effects 67 (1992) 121

Mechanism of supported liquid membrane degradation: emulsion formation 67 (1992) 133

Supported liquid membranes: stabilization by gelation 67 (1992) 149

Membrane extraction of silver by di(2-ethylhexyl)dithiophosphoric acid 70 (1992) 31

Transport of metals through gelled supported liquid membranes containing carrier 71 (1992) 41

Facilitated diffusion in immobilized liquid membranes: Experimental verification of the "jumping" mechanism and percolation threshold in membrane transport 75 (1992) 1

Surface-active glycine esters
Fluctuations of biomimetic membranes potential and membrane lysis, induced by surface-active glycine esters 66 (1992) 143

Surface analysis
Surface analysis of poly(vinylidene difluoride) membranes 70 (1992) 53

Surface characteristics
Surface studies on the ultrathin membrane prepared by spreading the polymer solution on a water surface 69 (1992) 121

Surface characterization of ethylene–vinyl alcohol copolymer membranes prepared under various conditions 75 (1992) 163

Surface characterization
Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

Surface chemistry
Ultrafiltration of protein solutions on ZrO_2 membranes. The influence of surface chemistry and solution chemistry on adsorption 74 (1992) 289

Surface coating, chemical
Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

Surface diffusion
Surface diffusion of organic vapor mixtures through porous glass 59 (1991) 233

Surface diffusion of hydrogen sulfide and sulfur dioxide in alumina membranes in the continuum regime 74 (1992) 263

A generalized model for the transport of gases in porous, non-porous, and leaky membranes. I. Application to single gases 75 (1992) 245

Surface enhanced Raman scattering (SERS)
Surface-enhanced Raman scattering (SERS) using polymer (cellulose acetate and Nafion) membranes impregnated with fine silver particles 55 (1991) 227

Surface heterogeneity
Ion transfer across electrodialysis membranes in the overlimiting current range: chronopotentiometric studies 72 (1992) 171

Surface layer thickness
On the effect of organo-silicon block copolymer–solvent–precipitant system composition on asymmetric membrane surface layer thickness 65 (1992) 1

Surface modification
A one-side hydrophilic polypropylene membrane prepared by plasma treatment 53 (1990) 275

Modification of ion-exchange membrane surface by plasma process. Part 2. Monovalent cation permselective membrane from perfluorosulfonate cation exchange membrane 54 (1990) 163

Separation of proteins by surface modified polysulfone membranes 57 (1991) 175

Plasma deposition of thin fluorocarbon films for increased membrane hemocompatibility 61 (1991) 289

Surface modified membranes
Surface-modified hydrophilic membranes in membrane distillation 72 (1992) 189

Surface pore characteristics
Quantitative microscopic study of surface characteristics of ultrafiltration membranes 54 (1990) 89

Surface properties
Contact angles of ultrafiltration membranes and their possible correlation to membrane performance 72 (1992) 293

Surface renewal
Predicting permeate flux in ultrafiltration on the basis of surface renewal concept 68 (1992) 107

Surface tension
Solvent-induced morphological change of microporous hollow fiber membranes 70 (1992) 217

Effect of anionic surfactant on copper extraction with N-8-quinolyl-*p*-dodecylbenzenesulfonamide in a hollow fiber membrane extractor 53 (1990) 287

Surfactant and ageing
Sorbitan monooleate (Span 80) decomposition during membrane ageing. A kinetic study 74 (1992) 9

Surfactant–membrane interaction
Aqueous–organic membrane bioreactors. Part I. A guide to membrane selection 71 (1992) 139

Surfactants
Design of a liquid membrane system for extracting rare earths 51 (1990) 249

Enhanced nitrate ultrafiltration by cationic surfactant 56 (1991) 1

The influence of nonionic and ionic surfactants on hydrophobic and hydrophilic ultrafiltration membranes 56 (1991) 49

Effect of new surfactants on zinc extraction with liquid surfactant membranes 57 (1991) 161

The use of anionic surfactants for reducing fouling of ultrafiltration membranes: their effects and optimization 67 (1992) 249

Interaction behaviour in ultrafiltration of nonionic surfactants. Part 1. Flux behaviour 69 (1992) 251

Separation of yttrium in a hollow fiber membrane 74 (1992) 215

Surfactant vesicles
Facilitated ion transport through thin bilayers 54 (1990) 259

Swelling
Water transport mechanisms in liquid emulsion membrane process for the separation of amino acids 51 (1990) 309

The study of the swelling of an ultrafiltration membrane under the influence of solvents by thermoporometry and measurement of permeability 58 (1991) 191

Study of the swelling phenomena of liquid surfactant membranes 59 (1991) 183

Swelling properties of partially hydrolyzed polyacrylamide gels and gelatin gels in aqueous media 64 (1991) 113

Poly(methyl methacrylate)/(DMF/metal salt) complex membrane for gas separation 74 (1992) 71

Swelling front penetration
Effect of geometry on solvent front penetration in glassy polymers 65 (1992) 77

Symport
Transport of nuclear acid bases through cation exchange membranes from poly(styrenesulfonic acid) and poly(vinyl alcohol) 61 (1991) 227

Synergistic extraction
Separation of yttrium in a hollow fiber membrane 74 (1992) 215

Synthetic membranes
Principles of biological membrane structure: Alteration of the physical state of one side of the membrane by modulation of the physical state of the opposite side of the membrane 53 (1990) 3

T

Table salt
Ion exchange membranes with preferential permselectivity for monovalent ions 54 (1990) 233

Temperature sensitivity
Preparation of temperature-sensitive membranes by graft polymerization onto a porous membrane 55 (1991) 119

Terminology
Terminology in pervaporation 51 (1990) 259

Tetradentate hydroxamate
A novel tetradentate hydroxamate as ion carrier in liquid membranes 69 (1992) 143

Theophylline, release of
Zero order release from glassy hydrogels. II. Matrix effects 54 (1990) 205

Zero order release from swollen hydrogels 54 (1990) 221

Theory
Statistical-mechanical theory of membrane transport 51 (1990) 1

On the introduction of the pore wall charge in the space-charge model for microporous membranes 51 (1990) 161

The energy of an ion in a cylindrical pore of a low dielectric membrane 52 (1990) 89

Mathematical modelling of multicomponent membrane permeators 52 (1990) 205

Membranes containing selective flakes 52 (1990) 275

Membrane transport properties in relation to microscopic and macroscopic structural inhomogeneity 52 (1990) 305

Theory study of the effect of ion adsorption on membrane potential and its application to collodion membranes 53 (1990) 19

Gas and vapour transport through microporous membranes. I. Knudsen-Poiseuille transition 53 (1990) 159

Pervaporation through dense membrane: Calculation method 54 (1990) 285

Competitive diffusion of hydrochloric acid and sodium chloride through an acid dialysis membrane 55 (1991) 79

Separation of gas mixtures in unsteady-state conditions 55 (1991) 283

Investigation of efficiency of gas separation on nuclear track membranes with ultra-small pores 55 (1991) 311

Applicability conditions of idealized flow models for gas separation by asymmetric membrane 55 (1991) 333

Momentum and mass transfer during ultrafiltration of dextran with tubular mineral membranes in turbulent flow regime 56 (1991) 29

Analysis of ion transport with fixed site carrier membranes 56 (1991) 229

Unsteady facilitated transport of oxygen in hemoglobin-containing membranes and red cells 56 (1991) 341

A stability model for the striping phenomenon in ultrafiltration 57 (1991) 43

Non-equilibrium thermodynamics as applied to membrane transport 57 (1991) 119

Limiting flux phenomena in ultrafiltration of kraft black liquor 57 (1991) 187

Membrane pore characterization - comparison between single and multicomponent solute probe techniques 57 (1991) 271

Effect of nonsolvents on the mechanism of wet-casting membrane formation from EVAL copolymers 59 (1991) 15

Continuous vapor-gas separation with a porous membrane permeation system 59 (1991) 53

A new transport model for pervaporation 59 (1991) 133

A study on the pervaporation of ethanol/water mixtures on the basis of pore flow model 59 (1991) 151

Preparation and characterization of silicon based inorganic membrane for gas separation 59 (1991) 331

Non-equilibrium microstructural and transport characteristics of glassy poly(ethylene terephthalate) 60 (1991) 41

Estimation of equilibrium compositions in dialysis of aqueous solutions of metal sulfates, $MeSO_4$, on cation-exchange membranes 60 (1991) 157

Three layer membrane model for characterizing ultrafiltration membranes 60 (1991) 195

Drop size prediction in liquid membrane systems 60 (1991) 261

Facilitated transport mechanism in fixed site carrier membranes 60 (1991) 297

Removal of trace organics from aqueous solutions. Effect of membrane thickness 61 (1991) 99

Scale-up of membrane systems from lab data 62 (1991) 309

Mass transfer dynamics of the evaporation step in membrane formation by phase inversion 64 (1991) 81

The pressure drop in membrane module with spacers 64 (1991) 103

Wheatstone bridge model for the laminated polydimethylsiloxane/polyethersulfone membrane for gas separation 64 (1991) 263

An analytical solution for competitive facilitated membrane transport 65 (1992) 39

A statistical mechanics approach to the separation of methane and nitrogen using capillary condensation in a microporous membrane 65 (1992) 163

A comprehensive model for cross-flow filtration incorporating polydispersity of the influent 65 (1992) 173

Non-linear flow through compressible membranes and its relation to osmotic pressure 66 (1992) 37

Experimental and modeling studies of a parasitic binding mechanism in facilitated membrane transport 66 (1992) 55

Environment-sensitive properties of polymethacrylic acid-grafted polyethylene membranes 66 (1992) 69

Water transport in cation exchange membranes 66 (1992) 179

The use of recycle permeator systems for gas mixture separation 67 (1992) 15

Deviations in the fouling resistance of UF membranes due to clean membrane permeability variations 67 (1992) 177

Biased diffusion across ion-exchange membranes. Percolation theory approach 67 (1992) 273

Modelling macromolecular diffusion through a porous medium 68 (1992) 93

Predicting permeate flux in ultrafiltration on the basis of surface renewal concept 68 (1992) 107

Concentration effects on membrane sieving: development of a stagnant film model incorporating the effects of solute–solute interactions 68 (1992) 183

Prediction of steady state crossflow filtration using a force balance model 68 (1992) 205

Osmotic pressure measurements of dissociating bovine hemoglobin 69 (1992) 213

Prediction of pervaporation separation characteristics for the ethanol–water–nylon-4 membrane system 70 (1992) 105

Improved analytical prediction of facilitation factors in facilitated transport 70 (1992) 289

Aqueous–organic membrane bioreactors. Part I. A guide to membrane selection 71 (1992) 139

Relation between gas permselectivity and permeability in a bilayer composite membrane 71 (1992) 169

Membrane potential of separation membranes as affected by ion adsorption 71 (1992) 189

A kinetic model for ion transport across skin 71 (1992) 257

A statistic model of pore size distributions in membranes 72 (1992) 13

Prediction of limiting flux in ultrafiltration of kraft black liquor 72 (1992) 137

Flux decline behaviour with low molecular weight solutes during ultrafiltration in an unstirred batch cell 72 (1992) 149

Diffusional phenomena in membrane separation processes 73 (1992) 103

Modelling of the diffusion of carbon dioxide in polyimide matrices by computer simulation 73 (1992) 247

Microstructures in phase-inversion membranes. Part 1. Formation of macrovoids 73 (1992) 259

Microstructures in phase inversion memmbranes. Part 2. The role of a polymeric additive 73 (1992) 277

How on eaerth, can I get chemical engineers to do their multi-component mass transfer sums properly? 73 (1992) 323

Plasticization effects on the gas permeability and permselectivity of polymer membranes 75 (1992) 47

Pervaporation of ethanol/water mixtures using novel hydrophobic membranes containing polydimethylsiloxane 75 (1992) 93

Generalized microscopic mechanism of facilitated transport in fixed site carrier membranes 75 (1992) 121

Theory data analysis
Correlation of separation factor versus permeability for polymeric membranes 62 (1991) 165

Thermal gradient
Pervaporation process using a thermal gradient as the driving force 53 (1990) 127

Thermodynamics
Binary and ternary interdiffusion of counter ions across cation exchange membrane 52 (1990) 143

Microporous membrane formation via thermally induced phase separation. I. Solid–liquid phase separation 52 (1990) 239

Some fundamental approaches to membrane gas permeability and permselectivity 53 (1990) 229

Mass transfer through polymer membranes due to a temperature gradient 54 (1990) 191

Permeation of chloromethanes in copolymers of chloroprene with methyl methacrylate and methacrylic acid 55 (1991) 239

Thermodynamic study of sorption of n-alkanes onto 5A zeolites immobilized in photosynthetic membranes 55 (1991) 263

Gas separation membranes containing carbon immobilized by photochemical grafting onto polymers 55 (1991) 273

Membrane technology of mixed-gas separation: thermodynamic analysis for feasibility study 55 (1991) 349

Transport of electrolytes across charged membranes. Part IV. Frictional interactions of the neutral and alkaline permeants and the permeability/reflection phenomena 56 (1991) 99

Energetics of active transport in inverted membrane vesicles of *Escherichia coli* 56 (1991) 327

Non-equilibrium thermodynamics as applied to membrane transport 57 (1991) 119

A thermodynamic description of membrane equilibria, dissipation and transport 60 (1991) 169

Relationship between permselectivity and permeability in pervaporation of water/alcohol mixture 65 (1992) 51

A statistical mechanics approach to the separation of methane and nitrogen using capillary condensation in a microporous membrane 65 (1992) 163

A nonideal model for analysis of gas separation permeators 65 (1992) 247

Determination of the streaming potential in ion-exchange membranes 67 (1992) 57

Solvent transport across anion-exchange membranes under a temperature difference and an osmotic pressure difference 67 (1992) 83

Thermoporometry. Modelling and simulation of a mesoporous solid 68 (1992) 271

Direct heating of composite membranes in pervaporation and gas separation processes 68 (1992) 293

A physicochemical study of reverse transport system based on nonequilibrium thermodynamics 70 (1992) 277

Solvent transport across cation-exchange membranes under a temperature difference and under an osmotic pressure difference 71 (1992) 151

Microstructures in phase-inversion membranes. Part 1. Formation of macrovoids 73 (1992) 259

Microstructures in phase inversion memmbranes. Part 2. The role of a polymeric additive 73 (1992) 277

How on eaerth, can I get chemical engineers to do their multi-component mass transfer sums properly? 73 (1992) 323

Thermomechanical deformation
Preparation conditions affecting the permeability of polyethylene microfiltration membranes 52 (1990) 109

Thermoosmosis
Mass transfer through polymer membranes due to a temperature gradient 54 (1990) 191

Solvent transport across anion-exchange membranes under a temperature difference and an osmotic pressure difference 67 (1992) 83

Solvent transport across cation-exchange membranes under a temperature difference and under an osmotic pressure difference 71 (1992) 151

Thermoporometry
The study of the swelling of an ultrafiltration membrane under the influence of solvents by thermoporometry and measurement of permeability 58 (1991) 191

Critical points in the analysis of membrane pore structures by thermoporometry 66 (1992) 45

Characterization of hollow fiber hemodialysis membranes: pore size distribution and performance 73 (1992) 143

Thermosensitive membranes
Molecular separation by thermosensitive hydrogel membranes 64 (1991) 283

Thin-film composite membrane
Reverse osmosis treatment of multicomponent electrolyte solutions 72 (1992) 211

Threonine
Specific membrane transport of copper(II) ion by a cooperative carrier composed of 1,7-diaza-15-crown-5 and palmitic acid 75 (1992) 61

Thymidine
Activity of alkaline phosphatase bound to polysulfone membranes 60 (1991) 75

Time-dependent boundary condition
A general expression for the total release of diffusant through heterogeneous membranes 66 (1992) 241

Titanium oxide membranes
Electro-kinetic transport coefficients of aqueous binary mixtures through titanium oxide porous plug 70 (1992) 1

Total release
A general expression for the total release of diffusant through heterogeneous membranes 66 (1992) 241

Track-etched membranes
Controllable changes in the porous structure of polymeric nuclear track membranes 55 (1991) 299

The deformation mechanisms of the porous structure of a poly(ethylene terephthalate) nuclear track membrane 64 (1991) 237

Transcutaneous transport
The skin as a barrier membrane: Relating *in vitro* measurements to *in vivo* behavior 52 (1990) 379

Transference number
Membrane transference numbers from a new emf method 74 (1992) 1

Transition Knudsen–Poiseuille
Gas and vapour transport through microporous membranes. I. Knudsen–Poiseuille transition 53 (1990) 159

Transmembrane pressure pulsing
Effect of transmembrane pressure pulsing on concentration polarization 68 (1992) 149

Transmembrane signaling mechanisms
Principles of biological membrane structure: Alteration of the physical state of one side of the membrane by modulation of the physical state of the opposite side of the membrane 53 (1990) 3

Transport
Transport of a zwitter ion across a composite ion-exchange membrane involving the dual sorption mechanism 69 (1992) 51

Transport coefficients
Interpretation of transport coefficients in Nafion using a parallel pore model 67 (1992) 227

Transport, directional behaviour
Micromolecular transport in oriented glassy polymer films studied by a variety of techniques 52 (1990) 325

Transport equations
Predictability of transport equations for pervaporation on the basis of pore-flow mechanism 70 (1992) 163

Transport kinetics
Membrane material effect on copper coupled transport through liquid membranes 64 (1991) 129

Transport mechanism
Ammonia permeabilities of perfluorosulfonic membranes in various ionic forms 68 (1992) 43

Transport model
Pervaporation of low volatility aromatics from water 53 (1990) 143

A study on pervaporation of aqueous benzyl alcohol solution by polydimethylsiloxane membrane 70 (1992) 249

Transport number
Transport number of an ion across an amphoteric ion-exchange membrane in $CaCl_2$–NaCl system 66 (1992) 235

Determination of some transport coefficients for the skin and porous layer of a composite membrane 69 (1992) 29

Transport properties
Reverse osmosis cellulose acetate membranes. II. Dependence of transport properties on acetyl content 59 (1991) 317

Transversal flow
The transversal flow microfiltration module. Theory, design, realization and experiments 73 (1992) 153

Trehalose
Stabilization of the lamellar structure of phosphatidylcholine by complex formation with trehalose 73 (1992) 173

Tributyl phosphate
Carrier-mediated transport of uranyl ions across tributyl phosphate–dodecane liquid membranes 64 (1991) 93

Tri-n-octylamine
Facilitated diffusion in immobilized liquid membranes: Experimental verification of the "jumping" mechanism and percolation threshold in membrane transport 75 (1992) 1

TRIS/MMA copolymer
Unequivocal definition and determination of "dissolved gas" permeability and resistances of the liquid layers in contact lens applications 69 (1992) 43

Turbulence promoter geometry
Turbulence promoter geometry: its influence on salt rejection and pressure losses of a composite-membrane spiral wound module 75 (1992) 205

Turbulence promotion
The transversal flow microfiltration module. Theory, design, realization and experiments 73 (1992) 153

Two step mechanism model
A two step mechanism of diffusion-controlled ethylene vinyl alcohol membrane formation 57 (1991) 69

U

Ultrafiltration

Ultrafiltration properties of hydrogel analogues of basement membrane: A comparison of the pore theory and the fibre–matrix hypothesis 51 (1990) 141

Fouling of inorganic membranes during whey ultrafiltration: Analytical methodology 51 (1990) 293

Ultrafiltration through hydrogels: Effects of hydration and crosslinking 52 (1990) 1

Fouling in tangential-flow ultrafiltration: The effect of colloid size and coagulation pretreatment 52 (1990) 173

Preparation and characterization of a new ultrafiltration membrane 53 (1990) 189

Protein adsorption and fouling in ceramic ultrafiltration membranes 55 (1991) 21

Separation of proteins from polyelectrolyes by ultrafiltration 55 (1991) 181

Enhanced nitrate ultrafiltration by cationic surfactant 56 (1991) 1

Effects of protein fouling on the apparent pore size distribution of sieving membranes 56 (1991) 13

Momentum and mass transfer during ultrafiltration of dextran with tubular mineral membranes in turbulent flow regime 56 (1991) 29

The influence of nonionic and ionic surfactants on hydrophobic and hydrophilic ultrafiltration membranes 56 (1991) 49

A stability model for the striping phenomenon in ultrafiltration 57 (1991) 43

Separation of proteins by surface modified polysulfone membranes 57 (1991) 175

Limiting flux phenomena in ultrafiltration of kraft black liquor 57 (1991) 187

On the calculation of membrane working surface using mass-transfer concepts 58 (1991) 139

Investigation of ultrafiltration kinetics 58 (1991) 147

The study of the swelling of an ultrafiltration membrane under the influence of solvents by thermoporometry and measurement of permeability 58 (1991) 191

Concentration polarisation build-up in hollow fibers: a method of measurement and its modelling in ultrafiltration 59 (1991) 81

A new transport model for pervaporation 59 (1991) 133

Concentration polarisation in a constant flux ultrafiltration rig: prediction of bulk protein concentrations using a lumped parameter model 59 (1991) 277

Porous polycarbonate phase-inversion membranes 60 (1991) 25

Preparation and properties of polyimide ultrafiltration membranes 60 (1991) 63

Three layer membrane model for characterizing ultrafiltration membranes 60 (1991) 195

Modification of polysulfone ultrafiltration membranes with UV irradiation and hydrophilicity increasing agents 60 (1991) 275

The influence of molecular mass of poly(vinyl chloride) on the structure and transport characteristics of ultrafiltration membranes 61 (1991) 131

Chemical modification of crystalline ultrafiltration membranes and immobilization of macromolecules 61 (1991) 167

Inorganic ultrafiltration membranes prepared by a combination of anodic film and sol–gel technologies 61 (1991) 215

Globular proteins and flexible-chain macromolecules. Ultrafiltration behaviour 62 (1991) 1

Teaching the engineering aspects of membrane process technology 62 (1991) 239

Optimal channel spacer design for ultrafiltration 62 (1991) 275

Scale-up of membrane systems from lab data 62 (1991) 309

Transport and reaction behavior of invertase ultrafiltration membranes made from substituted polysulfone 64 (1991) 173

Preparation of polyacrylonitrile ultrafiltration membranes from polymer solutions containing glycerol 64 (1991) 183

Formation of dynamic UF membrane with fine Zr particles 64 (1991) 273

Surface pore structures of micro- and ultrafiltration membranes imaged with the atomic force microscope 65 (1992) 101

A comprehensive model for cross-flow filtration incorporating polydispersity of the influent 65 (1992) 173

Influence of temperature on the ultrafiltration of silica sol in a stirred cell 66 (1992) 9

Critical points in the analysis of membrane pore structures by thermoporometry 66 (1992) 45

Transport of water through an inorganic composite membrane 66 (1992) 227

Laboratory-scale investigations into the use of extremely thermophilic proteinases for cleaning ultrafiltration membranes fouled during whey processing 67 (1992) 93

Deviations in the fouling resistance of UF membranes due to clean membrane permeability variations 67 (1992) 177

The use of anionic surfactants for reducing fouling of ultrafiltration membranes: their effects and optimization 67 (1992) 249

Dextran transport through asymmetric ultrafiltration membranes: Comparison with hydrodynamic models 68 (1992) 21

Fouling mechanisms of membranes during protein ultrafiltration 68 (1992) 79

Predicting permeate flux in ultrafiltration on the basis of surface renewal concept 68 (1992) 107

The separation of water and ethanol by pervaporation with PVA–PAN composite membranes 68 (1992) 141

Effect of transmembrane pressure pulsing on concentration polarization 68 (1992) 149

Concentration effects on membrane sieving: development of a stagnant film model incorporating the effects of solute–solute interactions 68 (1992) 183

Ultrafiltration concentration of enzyme hydrolysates 68 (1992) 195

Refractometric measurement of polarized layer structure: studies of hyaluronic acid ultrafiltration 68 (1992) 249

Development of new rod-type membranes for effluent decolorization: performance tests on model dye solutions 68 (1992) 307

Effects of pH and solvent density on dead-end upward ultrafiltration 69 (1992) 87

Transport and separation of proteins by ultrafiltration through sorptive snd non-sorptive membranes 69 (1992) 189

Interaction behaviour in ultrafiltration of nonionic surfactants. Part 1. Flux behaviour 69 (1992) 251

Protein type effects on steady-state crossflow membrane ultrafiltration fluxes and protein transmission 70 (1992) 177

Permporometry. The determination of the size distribution of active pores in UF membranes 71 (1992) 57

Membrane potential of separation membranes as affected by ion adsorption 71 (1992) 189

Using multistage techniques to improve diafiltration fractionation efficiency 72 (1992) 1

Prediction of limiting flux in ultrafiltration of kraft black liquor 72 (1992) 137

Flux decline behaviour with low molecular weight solutes during ultrafiltration in an unstirred batch cell 72 (1992) 149

Effect of membrane structure and protein concentration on the osmotic reflection coefficient 72 (1992) 277

Contact angles of ultrafiltration membranes and their possible correlation to membrane performance 72 (1992) 293

Ultrafiltation membranes from PVDF/PMMA blends 73 (1992) 25

Unsteady-state flux behaviour in relation to the presence of a gel layer 73 (1992) 231

Separation by coupling ultrafiltration and complexation of metallic species with industrial water soluble polymers. Application for removal or concentration of metallic cations 73 (1992) 313

Calculation of the entrance length of the concentration boundary layer in ultrafiltration and its influence on scale-up 74 (1992) 37

Ultrafiltration of bentonite suspensions with hollow fiber membranes 74 (1992) 51

Determination of osmotic pressure and fouling resistances and their effects on performance of ultrafiltration membranes 74 (1992) 141

Using micelles to determine the pore size of UF membranes 74 (1992) 279

Ultrafiltration of protein solutions on ZrO_2 membranes. The influence of surface chemistry and solution chemistry on adsorption 74 (1992) 289

An investigation on the configuration of inserts in tubular ultrafiltration module to control concentration polarization 75 (1992) 197

Ultrafiltration cells
Membrane reactors for the investigation of product inhibition of enzyme activity 52 (1990) 339

Ultrafiltration, dead-end and crossflow
Membrane reactor with double mass transfer: membrane requirements, fouling analysis and flux prediction during ultrafiltration of cell culture medium 69 (1992) 259

Ultrafiltration, mass transfer in

Mass transfer in ultrafiltration 61 (1991) 49

Ultrafiltration membranes
Quantitative microscopic study of surface characteristics of ultrafiltration membranes 54 (1990) 89

Membrane pore characterization – comparison between single and multicomponent solute probe techniques 57 (1991) 271

Ultrafiltration membrane cell recycle for continuous culture of *Propionibacterium* 61 (1991) 303

Characterisation of ultrafiltration membranes by impedance spectroscopy. I. Determination of the separate electrical parameters and porosity of the skin and sublayers 66 (1992) 19

Ultrafiltration membranes, anisotropic
Characterization of anisotropic UF-membranes: top layer thickness and pore structure 61 (1991) 73

Ultrafiltration membranes, structure of
The fine-structure of ultrafiltration membranes. I. Clean membranes 62 (1991) 75

The fine-structure of ultrafiltration membranes. II. Protein fouled membranes 62 (1991) 87

Ultrapure chemicals
Electrodialytic production of gas-free sodium hydroxide based on Donnan breakdown 57 (1991) 321

Unsteady cross filtration
Kinetics of concentration-polarization formation in cross-flow filtration of plasma from blood: experimental results 72 (1992) 267

Unsteady-state conditions
Separation of gas mixtures in unsteady-state conditions 55 (1991) 283

Unsteady-state flux
Unsteady-state flux behaviour in relation to the presence of a gel layer 73 (1992) 231

Uranyl ion transport
Carrier-mediated transport of uranyl ions across tributyl phosphate–dodecane liquid membranes 64 (1991) 93

Urease containing multi membrane
Diffusion-reaction of urea through multimembrane containing urease – Effects of microenvironments around urease and asymmetry of the membrane 54 (1990) 145

Urease, immobilized
Chitosan membrane with covalently immobilized urease. Pore size distribution 61 (1991) 279

Urea sensor
A one-side hydrophilic polypropylene membrane prepared by plasma treatment 53 (1990) 275

UV irradiation
Modification of polysulfone ultrafiltration membranes with UV irradiation and hydrophilicity increasing agents 60 (1991) 275

V

Vacuum distillation
Separation efficiency in vacuum membrane distillation 73 (1992) 217

Vapor deposition, electrochemical
Oxygen semipermeable solid oxide membrane composites prepared by electrochemical vapor deposition 66 (1992) 211

Vapor–gas permeation
Continuous vapor–gas separation with a porous membrane permeation system 59 (1991) 53

Vapor permeation
Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. I. Binary alcohol–water systems 68 (1992) 119

Comparison of the separation of mixtures by vapor permeation and by pervaporation using PVA composite membranes. II. The binary systems ammonia–water, methylamine–water, 1-propanol–methanol and the ternary system 1-propanol–methanol–water 68 (1992) 127

Methods to improve flux during alcohol/water azeotrope separation by vapor permeation 68 (1992) 229

Vapour permeation, industrial application of
Industrial application of vapour permeation 61 (1991) 113

Vermiculite
Gas barrier improvement using vermiculite and mica in polymer films 55 (1991) 173

Vesicles
Phospholipid polymerization and reconstitution of bacteriorhodopsin in photopolymerizable lipid vesicles 72 (1992) 21

Viscoelastic behavior

Micromolecular transport in oriented glassy polymer films studied by a variety of techniques 52 (1990) 325

Vitamin B12
Dynamics of washing-out dialyzers with hollow-fiber membranes 58 (1991) 201

Volatile organics
General treatment of liquid-phase boundary layer resistance in the pervaporation of dilute aqueous organics through tubular membranes 75 (1992) 29

Volatile organics, detection of
Modelling of the behaviour of microporous membrane sensors used in the detection of volatile organic solutes in aqueous media 59 (1991) 249

Volatile organics, removal of
Removal of trace organics from aqueous solutions. Effect of membrane thickness 61 (1991) 99

Vycor
Formaldehyde production from methanol using a porous Vycor glass membrane reactor 57 (1991) 95

A method for the determination of the pore size distribution of molecular sieve materials and its application to the characterization of partially pyrolyzed polysilastyrene/porous glass composite membranes 57 (1991) 237

Continuous vapor–gas separation with a porous membrane permeation system 59 (1991) 53

Vycor glass membranes
Evaluation of palladium-impregnation on the performance of a Vycor glass catalytic membrane reactor 65 (1992) 259

W

Washing-out dialyzer
Dynamics of washing-out dialyzers with hollow-fiber membranes 58 (1991) 201

Waste water neutralization
A diffusion model of Donnan dialysis under flow conditions 53 (1990) 45

Wastewater treatment
Ammonia removal from water using microporous hollow fibers 51 (1990) 127

A new liquid membrane technology – Electrostatic pseudo liquid membrane 52 (1990) 77

Separation of ternary salt/acid aqueous solutions using hollow fiber reverse osmosis 54 (1990) 175

Development of new rod-type membranes for effluent decolorization: performance tests on model dye solutions 68 (1992) 307

Membrane extraction of silver by di(2-ethylhexyl)dithiophosphoric acid 70 (1992) 31

Water and alkali durability
Preparation of water and alkali durable porous glass membrane coated on porous alumina tubing by sol–gel method 60 (1991) 307

The formation of microporous polyvinylidene difluoride membranes by phase separation 57 (1991) 1

Water dissociation
Effects of temperature and ion transport on water splitting in bipolar membranes 73 (1992) 191

Water–ethanol mixtures
Pervaporation process: membrane conditioning and experimental mass transfer analysis 74 (1992) 105

Water permeability
Water transport in cation exchange membranes 66 (1992) 179

Water permeation
Water permeability in poly(ortho ester)s 65 (1992) 269

Water pollution
On the nitrate and monovalent cation selectivity of ion exchange membranes used in drinking water purification 75 (1992) 265

Water purification
An integrated electrodialysis–evaporation process for the treatment of aqueous process streams containing electrolytes 52 (1990) 43

Water sorption
Mass transfer in Nafion membrane systems: Effects of ionic size and charge on selectivity 58 (1991) 175

Water sorption and ionic diffusion in short side chain perfluorosulfonate ionomer membranes 69 (1992) 155

Sorption and transport of ethanol and water in poly(ethylene-co-vinyl acetate) membranes 69 (1992) 223

Water state of Cuprophan (hemodialysis membrane) 74 (1992) 19

Water sorption and diffusion
Investigation of the separation factor between light and

heavy water in the liquid/vapor membrane permeation process 55 (1991) 257

Regenerated cellulose membrane from cuoxam/zincoxene blend 56 (1991) 207

Effect of geometry on solvent front penetration in glassy polymers 65 (1992) 77

The sorption of water vapor by an amorphous polyamide 65 (1992) 187

Water states in PE-poly(MA-co-DVB) interpolymer type carboxylic ion-exchange membranes 66 (1992) 89

Behavioral analysis of air perstripping 67 (1992) 1

Pervaporation through structurally unstable polymeric membranes 67 (1992) 167

Hollow fiber air drying 72 (1992) 231

Water states
Water states in PE-poly(MA-co-DVB) interpolymer type carboxylic ion-exchange membranes 66 (1992) 89

Water transfer
Mass transfer through polymer membranes due to a temperature gradient 54 (1990) 191

Water transference number
Water transport in cation exchange membranes 66 (1992) 179

Water transport
Water transport mechanisms in liquid emulsion membrane process for the separation of amino acids 51 (1990) 309

Interactions of polyether-polyurethanes with water vapour and water-methane separation selectivity 64 (1991) 229

Transport of water through an inorganic composite membrane 66 (1992) 227

Water treatment
Fouling in tangential-flow ultrafiltration: The effect of colloid size and coagulation pretreatment 52 (1990) 173

Enhanced nitrate ultrafiltration by cationic surfactant 56 (1991) 1

Metal collection using chelating hollow fiber membrane 58 (1991) 221

Characterization of reverse osmosis cellulose acetate membranes by gas adsorption method: effect of casting variables and chlorine damage 62 (1991) 325

A comprehensive model for cross-flow filtration incorporating polydispersity of the influent 65 (1992) 173

Improvement of crossflow microfiltration performances with flocculation 68 (1992) 241

Use of sealed end hollow fibers for bubbleless membrane aeration: experimental studies 69 (1992) 1

The use of independently sealed microporous hollow fiber membranes for oxygenation of water: model development 69 (1992) 11

A re-appraisal of modelling in a liquid surfactant membrane waste water cleanup process 70 (1992) 283

Ultrafiltration of bentonite suspensions with hollow fiber membranes 74 (1992) 51

Removal of *p*-nitrophenol from aqueous solution by membrane-supported solvent extraction 75 (1992) 277

Wet-casting membrane formation
A diffusion-controlled model for wet-casting membrane formation 59 (1991) 169

Wheatstone-bridge model
Wheatstone bridge model for the laminated polydimethylsiloxane/polyethersulfone membrane for gas separation 64 (1991) 263

Whey
Fouling of inorganic membranes during whey ultrafiltration: Analytical methodology 51 (1990) 293

Evaluation of process models for fouling control of reverse osmosis of cheese whey 58 (1991) 89

Laboratory-scale investigations into the use of extremely thermophilic proteinases for cleaning ultrafiltration membranes fouled during whey processing 67 (1992) 93

Reverse osmosis of whey. Determination of mass transfer coefficients 68 (1992) 301

Whey protein
Calculation of the entrance length of the concentration boundary layer in ultrafiltration and its influence on scale-up 74 (1992) 37

X

X-ray induced degradation
Surface analysis of poly(vinylidene difluoride) membranes 70 (1992) 53

X-ray photoelectron spectroscopy
Characterization of ion exchange membrane surfaces by means of X-ray photoelectron spectroscopy and SEM 58 (1991) 49

Y

Yttria stabilized zirconia
Oxygen semipermeable solid oxide membrane composites prepared by electrochemical vapor deposition 66 (1992) 211

Z

Zeolite filled membranes
Preparation and characterization of thin-film zeolite-PDMS composite membranes 73 (1992) 119

Zeolites
Thermodynamic study of sorption of n-alkanes onto 5A zeolites immobilized in photosynthetic membranes 55 (1991) 263

Molecular sieving effect of the zeolite-filled silicone rubber membranes in gas permeation 57 (1991) 289

Zero order release
Zero order release from glassy hydrogels. II. Matrix effects 54 (1990) 205

Zero order release from swollen hydrogels 54 (1990) 221

Zeta potential
Surface studies on the ultrathin membrane prepared by spreading the polymer solution on a water surface 69 (1992) 121

Size distribution and zeta-potential of polyamide microcapsules 72 (1992) 163

Zinc ion extraction
Effect of new surfactants on zinc extraction with liquid surfactant membranes 57 (1991) 161

Zirconium
Formation of dynamic UF membrane with fine Zr particles 64 (1991) 273

Zirconium oxide
Momentum and mass transfer during ultrafiltration of dextran with tubular mineral membranes in turbulent flow regime 56 (1991) 29

Preparation of water and alkali durable porous glass membrane coated on porous alumina tubing by sol-gel method 60 (1991) 307
